Percent Adjusted By	17-21	N	Increase would be the percent increase. Decrease would be percent decrease (e.g., 50% increase would be entered as 05000, 20% decrease would be entered as 02000). A decimal point is established between pos. 19-20.
Blank	22		Not used.
Low Weight Parameter	23-27	N	Enter maximum weight of lowest rate base weight group to be updated. See note.
Blank	28		Not used.

FIELD LEGEND	FIELD POSITIONS	TYPE	SOURCE/EXPLANATION
High Weight Parameter	29-33	N	Enter maximum weight of highest rate baseweight group to be updated. See note.
Blank	34-80		Not used.

NOTE: When both the low weight parameter and high weight parameter data fields are left blank, all weight categories in the rate base record will be updated. When one weight parameter field contains numeric data and the other is blank, the card input will violate on the F-85 report with an E5 Violation Reason Code.

APPENDIX B-181

MOFAST DATA BASE UPDATE FORMAT (MODE, HOLD, STATUS AND PROCESSING CODES)

1. PURPOSE

The input-output formats contained in this appendix will reflect the data elements that an operator may enter on a CRT data base update request.

2. REFERENCES

a. Appendix A-17

b. Appendix A-21

c. Appendix A-100

d. Appendix A-102

e. Appendix D-162

f. Appendix E-223 P

g. DLAM 4745.1

3. DATA ELEMENTS

a. Update individual shipment unit records.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit Number(s)	7, 11, or 13	N	MRO (DD Form 1348-1) or Routing Slip. Multiple SU numbers may be entered. Enter the 11-position number if shipment has been single lined. Enter 13-position number if shipment has been single-lined and partialed.
Check Digit	1	N	MRO (DD Form 1348-1) or Routing Slip. A check digit must be entered for each SU number entered.
Mode Code*	1	A/N	Enter the new mode of shipment desired. See appendix A-17.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Hold Code*	1	A	Enter the new hold code desired. See appendix A-21.
Status Code*	1	A	Must be K, M, N, P or Q. The status of a shipment unit cannot be updated if present status is Y or Z. See appendix A-102.
Processing Code*	2	A	Enter the new processing code desired. See appendix A-100.

*Any or all of these data elements may be entered for each SU number depending on which elements require updating.

b. Update all shipment unit numbers assigned to a GBL.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Government Bill of Lading Number	8	A/N	Route slip attached to MRO. First digit must be alpha.
Mode Code	1	A/N	Enter the new mode of shipment desired. Reference appendix A-17. Mode of Shipment Codes G, H, 5, 6, 7 and 9 are invalid mode of Shipment Codes for this process.
Hold Code	1	A	Enter the new hold code desired. See appendix A-21.

APPENDIX B-182

MOFAST LOGAIR/GOVERNMENT TRUCK/INTRADEPOT SHIPMENT CONFIRMATION FORMAT

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator must enter to confirm either LOGAIR, Government Truck, Intradepot, QUICKTRANS, SEAVAN, UPS, Small Package Carrier, or Air Express shipments.

2. REFERENCES

a. Appendix D-161

b. Appendix E-223 P

c. Appendix E-231 P

d. DLAM 4745.1

3. DATA ELEMENTS

a. General

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Type Request (Mode)	1	A/N	Type of request code identifies modes of shipment applicable to this process. T - Air Freight Forwarder I - Government Truck J - Air Small Package Carrier Air N - LOGAIR U - QUICKTRANS V - SEAVAN X - Bearer, Walk-Thru (Customer Pickup of Material) 5 - Small Surface Package Carrier 9 - Local Delivery and Intradepot movement Q - Commercial Air Freight

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Shipment Unit Number	7, 11, or 13	N	MRO (DD Form 1348-1) or routing slip. Enter the 11-position number if shipment has been single lined. Enter 13-position number if shipment has been single lined and partialed.
Check Digit	1	N	MRO (DD Form 1348-1) or routing slip.

b. The following additional data is required for Type Request Codes 5, J, Q or T only.

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Shipment Identification Number - SHPID	8	A/N	UPS, Small Package Carrier or Air Express shipment number. Left-justified.
Cost	1 to 5	N	Shipment Cost (cents). Left-justified.
Weight	1 to 5	N	Shipment Weight (whole pounds). Left-justified. If type request code is 5, cannot exceed 70 pounds.
Date Shipped	5	N	Julian date shipped. Must be equal to or less than current date.

APPENDIX B-183

CARRIER FILE INQUIRY AND UPDATE FORMAT

1. PURPOSE

The input-output formats contained in this appendix will reflect the data elements that an operator will be required to enter on a CRT.

2. REFERENCES

a. Appendix A-106

b. Appendix E-230 P

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Action Code	1	A	A - Add D - Delete G - General Inquiry S - Specific Inquiry U - Update an Existing Record
Carrier Code	4	A/N	Appendix A-106.
Carrier Name	29	A/N	Appendix A-106.

APPENDIX B-184

MOFAST TERMINAL ROUTING AND CARRIER ASSIGNMENT PROCESS

1. PURPOSE

The input-output formats contained in this appendix will reflect the data elements that an operator will be required to enter or update on the CRT.

2. REFERENCE

Appendix E-238 P, Part 1

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Geographical Area Code	3	A/N	Locally assigned code used to identify transportation distribution areas. Use first digit to identify major geographical area. Second and third digits are used to subdivide major areas. Geographical area code used in this table must be compatible with geographical area codes in DoDAAD files.
Carrier Code	4	A/N	Assign code for applicable line haul carrier when applicable. Leave blank when not applicable.
Status Code	1	A/N	1 = Item is active. Shipment Units have been processed for this geographical area. $ = Will assign item status equal to 1. @ = Status will be changed to blank. * = Will override status of 1.
Government Bill of Lading Number	8	A/N	Enter GBL number shown of route slips to identify GBL receiving "stop shipment unit accumulation" status.
Spur Number	2	A/N	Enter Spur number of desired freight terminal area.

APPENDIX B-185

MOFAST SPLC RATE BASE FILE MAINTENANCE

1. PURPOSE

The format contained in this appendix will reflect the data elements that an operator will be required to add or keep updated.

2. REFERENCES

a. Appendix B-180

b. Appendix E-236 P

3. DATA ELEMENTS

MOFAST Rate Base File Maintenance Teleprocessing (CRT)

a. SPLC/Rate Base/Tariff Tender Cross-Reference File

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Standard Point Location Code (SPLC)	9	A/N	Enter SPLC for transportation delivery area as shown in local SPLC information or National Trucking Association SPLC Guide.
Mode	1	A/N	Enter pertinent Mode Code per appendix A-17 as follows: Modes A, B, E, J, K, L or M = surface shipments. Modes Q, R, S or T = air freight shipments.
Rate Base Number (R-BASE-NR)	6	A/N	Class rate base number from applicable tariff document.
Tariff Number (TARIFF-NR)	10	A/N	Applicable tariff number.
FAK Flag (F)	1	A/N	G = GRT L= LTL FAK V = TL FAK Blank = Class Rate.
GRT Tariff	10	A/N	Tariff number for specific GRT tariff.
GRT-R-B	6	A/N	Rate base number for specific GRT SPLC Record.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Rate (T)	1	A	A = Amount percent. C = Class percent (average LTL)
Contraband List Code (CL)	2	A/N	Locally assigned code used to identify contraband NMFCs applicable to a tariff.
ECPT	2	A/N	Locally assigned 2-position code used to reference a specific carrier exception (nonparticipating) list for GRT tariff.
Alternating	1	A	Y = Alternating tariff. N = Nonalternating tariff.
Tender (Repeat Up to 12 Times)			
Carrier Code (CARR)	4	A/N	MTMC carrier list.
Tender Number (TNDR)	5	A/N	Tariff data.
Rate Base Number	6	A/N	Rate base number from applicable tariff/tender document.
Type Rate (T)	1	A	A = Amount Percent C = Class Percent (Avg. LTL).
Contraband List Code	2	A/N	Locally assigned code used to (CL) identify contraband NMFCs applicable to a tariff.
Alternating Y/N (A)	1	A	Y = Alternating tariff. N = Nonalternating tariff.
Prime Carrier (P)	1	A/N	1 - Identifies prime carrier. Blank - Other than prime carrier.

NOTE: Make prime carrier Tender 1.

b. Rate Base File

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Rate Base Number	6	A/N	Stated in tariff document.
Tariff Number	10	A/N	Stated in tariff document.
Beyond Code (BEY)	2	A/N	Locally assigned code used to identify beyond/arbitrary charges for a tariff. Group Code (GP) 1 A/N locally assigned code used to identify charges applicable to specific tariff groups.
Minimum Amount (MIN-AMT) Applicable to GBL	7	N	As specified in tariff documentation, enter dollar and cents amount without decimal point. Fill with leading zeros.
Reference to Table of Multiple Minimum	(3)	A/N	When the tariff specifies the use of multiple minimum charges, enter M and 2-position locally developed code to reference table of minimum charges. Remaining positions in data field must be zero filled.
Rates (Repeat Up to 10 Times)			
Maximum Weight	5	N	Enter Maximum Weight for each weight group. Enter all 9's for highest weight category.
Rate/CWT (RCWT)	5	N	Enter dollar and cents without decimal point for each weight group.

NOTE: Fill fields as you go; do not skip.

c. Beyond Indicator Record

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Beyond Code	2	A/N	Locally assigned code which identifies beyond/arbitrary charge record.
Standard Point Location Code (SPLC)	9	A/N	Locally developed SPLC Code from rate base file key.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Carrier Code (CARR)	4	A/N	MTMC carrier list.
Carrier Application (CA)	1	B	Leave blank.
Less Than Truck Load (LTL)	1	A/N	C - Computes beyond charge using average LTL factor. Blank - Beyond charge is based upon amount in the pertinent GBL weight group.
Minimum Amount (MIN-AMT)	5	N	Enter cents tariff documentation (dollar and cents without decimal point). See note 2.
Maximum Amount (MAX-AMT)	5	N	Same as above. See note 2.
Arbitrary Amount (ARB-AMT)	5	N	Same as above. See note 2.
Rates (Repeat Up to 8 Times)			
Maximum Weight (M-MGT)	5	N	Enter weight in pounds applicable to each weight tariff group. Enter all 9's for highest weight.
Rate/CWT (RATE)	5	N	Cents amount applicable to each weight group.

NOTE 1: For dollar and cents entries, do not include decimals points. Program will automatically place decimal point.

NOTE 2: When the tariff specifies the use of multiple amounts, enter M and 2-position locally developed code to reference table of multiple charges. Remaining positions in data field must be zero filled.

d. Tariff Tender File

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Carrier	4	A/N	Enter code from standard carrier list.
Tender	5	A/N	Specified in tariff document.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Rate Base Number	6	A/N	Rate base number from applicable tariff/tender document.
Type Rate	1	A/N	A = Amount per CWT. C = Class percent (avg LTL).
Minimum GBL Weight (MIN-WGT) Applicable to Tariff (LBS)	5	N	Lowest amount of GBL weight to be accepted under this tariff. See note 2.
Minimum Cost (MIN-CST) Applicable to GBL	7	N	Minimum charge in cents for GBL acceptable under this tariff. See note 2.
Rate (Repeat Up to 10 Times)			
Maximum Weight (M-WGT)	5	N	Enter maximun weight applicable to each weight group. Enter all 9's for highest category.
Rate Amount (CENTS/CWT)or LTL Class Percent (R-AMT)	5	N	If Type Rate Code is C, enter average LTL class percent for each weight group. If Type Rate Code is A, enter average cents.

NOTE 1: Enter data as per instructions in appendix E-236 P.

NOTE 2: When the tariff specifies the use of multiple amounts, enter M and 2-position locally developed code to reference table of multiple charges pertinent to the respective data element. Remaining positions in data field must be zero filled.

e. Special Tariff File

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Tariff Number	10	A/N	From tariff document.
Distribution Area	1	A/N	Locally assigned code used to identify tariff distribution areas.
Contraband List Code (CL)	2	A/N	Locally assigned code used to identify contraband NMFCs applicable to a tariff.
Alternating Y/N (T)	1	A	Y = Tariff is alternating. N = Tariff is nonalternating.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Pallet Weight	3	N	The percentage of total GBL weight.
Factor (PAL)			Allowed for pallet/skid weight deduction.
Stop Charge (S-CHG)	5	N	Cost to be added for each stop in route for part unload. Enter dollars and cents without decimal point. See note.
**Distribution Charge			
**Amount/CWT (A-CWT)	5	N	Amount (cents)/CWT applicable to distribution charge for pertinent tariff. See note.
**Minimum Charge GBL (MIN-C)	5	N	Lowest acceptable distribution charge allowed for GBL. See note.
**Maximum Charge GBL (MSX-C)	5	N	Highest distribution charge allowed for GBL. See note.
Minimum GBL Cost (MIN-CST)	5	N	Lowest acceptable transportation pertinent tariff. See note.
Minimum GBL Weight (MIN-WGT)	5	N	Lowest amount of GBL weight acceptable under pertinent tariff.
Beyond Charge Indicator (BEY)	2	A/N	Locally assigned code used to reference the beyond charge file.
Rates (Repeat Up To 6 Times)			
Maximum Weight (M-WGT)	5	N	Enter maximum weight applicable to each weight group. Enter all 9's for highest weight category.
Amount/CWT (A-CWT)	5	N	Cents applicable weight group.

NOTE: When the tariff specifies the use of multiple amounts enter M and 2-position locally developed code to reference table of multiple charges pertinent to the respective data element. Remaining positions in data field must be zero filled.

f. Spur File

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Title	8	A	Enter SPURFILE.
Sequence Number	1	N	If you want a specific record, enter the number; otherwise, the file will start with 1.
Spurs (Repeat Up To 22 Times)			
Spur	2	A/N	Enter valid freight terminal spur number.

g. Contraband List Table

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Contraband List	2	A/N	Locally assigned code used to identify contraband items applicable to a specific tariff.
Sequence Number	2	N	If you want a specific record, enter the number; otherwise, the file will start with 01.
NMFC (S) (Repeat Up to 7 Times)			
National Motor Freight Classification (NMFC)	6	A/N	Enter NMFCs which are contraband under a specific tariff.
Low LTL	4	N	Enter numeric value of low LTL parameter. LTL values equal to or less than this parameter will be rated as contraband under this record.
High LTL	4	N	Enter numeric value of high LTL parameter. LTL values equal to or greater than this parameter will be rated as contraband under this record.

h. GBL Exception Carriers

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Exception Carrier Code	2	A/N	Enter 2-position locally assigned code to identify a specific exception carrier table.
Sequence Number	2	N	Use to select a specific line of an exception carrier record.
Carriers	4	A/N	Standard alpha carrier codes for non-participating carriers under a GRT tariff.

i. Multiple Amount Record

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Reference Key	3	A/N	Reference code from amount fields established locally in rate base tariff records.
Amount Fields (Enter Up to 10 Per Record)			
Weight	5	N	Maximum weight (lbs.) for each weight group applicable for minimum, arbitrary, or maximum charge tables under a specific tariff.
Amount	5	N	Amount in cents applicable to each weight group for weight above.

APPENDIX B-186

MOFAST GBL IN-PROCESS INQUIRY

1. PURPOSE

Show data required for inquiring contents of the daily Government Bill of Lading (GBL) register.

2. REFERENCE

Appendix E-224 P, Part D

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Inquiry	1	A	C - Displays all canceled GBL numbers. G - Displays all GBL numbers and their status codes. R - Displays GBL numbers followed by all GBL register data. T - Displays total information of the GBL register.
Alpha Government Bill of Lading	1	A	First digit of the series of bills of lading desired to display. (Differentiates between GBL and CBL.)

APPENDIX B-187

MOFAST INQUIRY/MAINTENANCE OF CONSOLIDATED PACK SHIPMENT UNIT RECORDS

1. PURPOSE

The input format listed below can be used to inquire the Shipment Unit (SU) numbers pertinent to a Consolidated Pack or disassemble the Consolidated Pack SU grouping pertinent to a specified master SU.

2. REFERENCE

Appendix E-224 P, Part G

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit Number	7 or 13	N	Route slip or short GBL display (UWFJ10).
Unchain Indicator	7	A	Enter UNCHAIN immediately following the SU number when consolidated SU structure is to be disassembled. UNCHAIN indicator is not to be used for inquiry action.

APPENDIX B-188

MOFAST GBL COVER SHEET INQUIRY AND UPDATE FORMAT

1. PURPOSE

Final edit and correction of the MOFAST Government Bill of Lading (GBL) cover sheet. This process gives the capability of reviewing the GBL cover sheet and correcting selected fields before final printing.

2. REFERENCE

Appendix E-238 P, Part A

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Action Code	1	A	Must be I.
Field Separator	1	A/N	Must be comma.
Government Bill of Lading Number	8	A/N	Valid GBL number.
Field Separator	1	A/N	Must be comma.
Part Number	1	N	Part number of GBL record to be displayed or updated. Must be 1 through 5.

APPENDIX B-189

MOFAST GBL DESCRIPTION OF ARTICLES INQUIRY

1. PURPOSE

The input format listed below can be used to obtain the Government Bill of Lading (GBL) line entry inquiry, the freight description of the line entry and update of the freight description.

2. REFERENCE

Appendix E-224 P, Part F

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Inquiry Code	1	A	L - Line record inquiry. F - Freight description inquiry/update. N - Matching NMFC inquiry/update. D - Matching freight description inquiry/update. S - Last GBL line record (per SU inquiry).
Government Bill of Lading Number	8	A/N	Route slip, printed GBL.
Government Bill of Lading SU Record Sequence Number	4	N	Sequence number assigned to a SU when it is assigned to a GBL (L, F, S type entries only).
or			
NMFC With or Without	6 or 8	A/N	MRO, DD Form 1348-1 (N type entry only).
or			
Freight Description	8	A/N	First 8 positions of freight description (D type entry only).
Government Bill of Lading National Motor Freight Classification Line Record Sequence Number	4	N	Sequence number assigned to GBL line records (L and F entries only).

APPENDIX B-190

MOFAST GBL SHIPMENT UNIT ENTRY INQUIRY

1. PURPOSE

The input formats listed below can be used to obtain the Government Bill of Lading (GBL) Shipment Units (SU) entry inquiry and update GBL cost and transportation account code fields.

2. REFERENCES

a. Appendix E-224 P, Part C

b. DLAM 4745.1

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Government Bill of Lading Key			
Government Bill of Lading Number	8	A/N	Routing slip.
Shipment Unit Sequence	4	N	Short GBL inquiry.
Line Item Sequence	4	N	DD Form 1348-1.
Update Indicator	1	A/N	R - Change GBL cost only. X - Change GBL cost and transportation account code. Blank - Inquiry.
Change Data			
Government Bill of Lading Cost	7	N	Source - Transportation rating personnel. To effect a change place cursor under the leftmost character to be changed and type in changes.
Transportation Account Code	55	A/N	Source - Codes developed by respective finance centers. To effect a change place cursor under the leftmost character to be changed and type in changes.

APPENDIX B-192

REDISTRIBUTION ORDERS

1. This format is used to provide distributed activities with instructions for preparation and shipping of redistribution materials. Processing of this document is depicted in appendix D-41.

2. The following are the fields in this transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter A2_.
Routing Identifier Code	4-6	Enter the appropriate RIC applicable to the distribution depot to which the MRO is directed.
Media and Status Code	7	Enter code as shown on the requisition.
National Stock Number	8-22	If DIC is for a Redistribution Order containing an NSN, pos. 8-20 will be used. If DIC is for part number, Redistribution Order pos. 8-22 will be used.
Unit of Issue	23-24	Enter the UI applicable to the stock number.
Quantity	25-29	Enter the quantity of the item requested.
Document Number	30-43	Enter the document number as shown on the requisition.
Demand/Suffix	44	Enter the code as shown on the requisition.
Supplementary Address	45-50	Enter code as shown on the requisition.
Signal Code	51	Enter code as shown on the requistion.
Fund Code	52-53	Enter the fund code as shown on the requisition.
Distribution	54-56	Field will be blank unless entries are prescribed by the preparing activity.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Project	57-59	Enter the code as shown on the requisition when applicable.
Priority	60-61	Enter the code as shown on requisition.
Required Delivery Date	62-64	Enter date as shown on requistion. Normally left blank.
Advice Code	65-66	Enter advice code as shown on requisition.
Date of Receipt of Order	67-69	Leave blank. Processing point will enter date of receipt.
Ownership	70	Enter data as shown on requisition.
Supply Condition	71	Enter supply condition.
Management Code	72	Enter management code.
Type Pack	73	Enter type pack if applicable.
Routing Identifier	74-76	Enter the code applicable the DSC originating the MRO.
Inventory Control Data	77-80	Inventory control codes as shown on requisition.

3. VALIDATION

Violation rejects will be listed on appendix F-85 when other than as noted below:

FIELD POSITION	VALIDATION	VIOLATION CODE
1-3		--
4-6	Rerouted if not depot's RIC TO.	
8-20	Numeric and not all zeros for Redistribution Orders with NSN.	AY
23-24	Alphas only.	AN

FIELD POSITION	VALIDATION	VIOLATION CODE
25-29	Numeric, not all zeros.	AS
30-43	Alpha/numeric pos. 30-35, numeric pos. 36-39, alpha/numeric pos. 40, alpha/numeric pos. 41-43. No blanks.	AI
45-50	Alpha/numeric/blanks. Field cannot be all blank or contain a Y in pos. 45 when pos. 51 contains J, K, L, M or X.	BJ
51	Aplha A, B, C, D, W, J, K, L, M or X only.	AU
60-61	Numeric 01 through 15 only. System will assign 15 if not a valid entry.	--
62-64	Only validated when pos. 65-66 contains 2T, then must be all numeric.	3W
70	Alpha, numeric or blank.	AQ
71	Alpha A, B, C, D, E, F, G, H, J, K, L or M only.	AF
72	Alpha or blank when positions 74-75 other than S9. Alpha A, F, G, H, S or blank when position 74-75 is S9.	
74-76	Alphanumeric. Must be in the table and control file.	AB

APPENDIX B-193

MOFAST GBL DATA ASSEMBLY FORMAT

1. PURPOSE

The input-output formats contained in this appendix will reflect the data elements that an operator is required to enter to initiate the GBL assembly process.

2. REFERENCES

Appendix E-238 P, Part K

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Government Bill of Lading Number	8	A/N	Billing Documentation
Action Code	1	A	If entered, must be: R = Restart GBL with complete reinitialization. S = Restart GBL with partial reinitialization. Q = Clear GBL status to allow GBL to be restarted with Action Code R or S.
Destination	1	A/N	Billing Documentation. If entered, must be 6-position destination code or 3-position right-justified APOE/WPOE.

4. Procedures for updating data elements shown in the GBL cover sheet display are documented in appendix E-238 P, part K.

APPENDIX B-194

MOFAST GBL PRINT FORMAT

1. PURPOSE

Shows the input-output elements an operator will be required to enter on the Government Bill of Lading (GBL) print, Foreign Military Sales Commercial Bill of Lading (FMS/CBL) print and TK4 card preparation process.

2. REFERENCES

a. Appendix D-154

b. Appendix E-224 P, Part A

3. DATA ELEMENTS

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Government Bill of Lading Number	8	A/N	Shipment route slip (F-180).
Date Shipped	5	N	Julian date of shipment if other than current date.
Type Request Code	1	A	Type request code: A = Request reprint of all continuation pages. S = Request reprint of specific GBL continuation pages. P = Print TK4 data at remote printer. T = Punch TK4 card. H = Suspend TK4 data. C = Cover sheet reprint (see note). D = Restart GBL print when print is interrupted by teleprocessing failure. F = Request FMS/CBL initial print.
Continuation Pages	1-30	N	Specified pages to be reprinted not to exceed five requests separated by commas. (Example: 1-3, 6 will reprint page numbers 1, 2, 3, and 6).

NOTE: When GBL cover sheet reprint request is initiated, a new GBL number will be assigned and revised TK4 card prepared provided the automatic TK4 option is set. The original number will be retired to microfiche with appropriate cancellation reason and cross-reference to the new GBL number. When FMS/CBL cover sheet requested, a new number will not be assigned.

APPENDIX B-195

MOFAST MICROFICHE HISTORY UPDATE PROCESS

1. PURPOSE

This input is made through CRT to provide a display of a specific GBL so that the GBL History can be updated, corrected or deleted as required for the microfiche record after the GBL is printed but before print of the hard copy microfiche. This record will be on-line for at least 10 days for update. Any changed data entered to the GBL Cover Page or Continuation Page will be in the same location or sequence on the microfiche as original data. Capability is provided to correctly document microfiche history relative to SU/MRO data recorded as shipped on one GBL but actually shipped on another. These generally are MROs which were canceled from other planned shipments after confirmation of shipment and cleared from MOWASP in-process files.

2. REFERENCES

a. Appendix D-139

b. Appendix E-195 P

3. DATA ELEMENTS

a. Part 1

(1) Initiate update data.

(a) Program Call Number $$UWFN75.

(b) Operator Security Identification.

(2) Update GBL Cover Page data or Continuation Page data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
Operator Identification	2	A/N	Operators number (not same as Security Identification).
Action Code	2	A	AG - Add GBL Cover Sheet. IG - Inquire GBL Cover Sheet. UG - Update GBL Cover Sheet. AC - Add Continuation Page. IC - Inquire Continuation Page. UC - Update Continuation Page. IS - Inquire Carrier/RIN MS - Modify Carrier/RIN

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
Government Bill of Lading	8	A/N	GBL number of record to be updated.

(3) Update Shipment Unit data within the GBL.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
Operator Identification	2	A/N	Enter operators number.
Action Code	2	A	Enter AC to add Continuation Sheet. IC to inquire Continuation Sheet. UC to update Continuation Sheet.
Government Bill of Lading Number	8	A/N	Enter GBL number of record to be updated.
Shipment Unit Number	13	N	Enter SU number to updated or deleted.
NMFC Sequence Number	4	N	Enter NMFC sequence number for NMFC data to be updated or deleted.

(4) Update Carrier/RIN Statement Data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
Operator Identification	2	A/N	Enter operators number.
Action Code	2	A	Enter IS to inquire Carrier/RIN statement. MS to update Carrier/RIN statement.
Government Bill of Lading Number	8	A/N	Enter GBL number of record to be updated.
Statement Number	4	A/N	Enter C for carrier and three position statement number or R for RIN and three position RIN number.

b. Part 2

(1) Initiate MRO and data to microfiche history.

(a) Program Call Number $$UWFN70.

(b) Operator Security Identification.

(2) Add GBL backup data for microfiche history.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
Action Code	2	A	Computer entered AM. No other update is possible.
Government Bill of Lading	8	A/N	Enter GBL number of record to be added to.
Shipment Unit Number	13	N	Enter SU number with which MROs are associated.

APPENDIX B-196

MOFAST MANUAL GBL FORMAT

1. PURPOSE

To show data required to be entered for processing manual GBL information.

2. REFERENCES

a. Appendix A-106

b. Appendix D-167

c. Appendix E-235 P

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit Number	7, 11 or 13	N	MRO or shipping documentation.
Check Digit	1	N	MRO or shipping documentation.
Government Bill of Lading Number	8	A/N	GBL Form (SF 1109).
Government Bill of Lading Cost	2-7	N	Enter dollar and cents value with two decimal places (e.g., 9.40).
Carrier Code	4	A/N	Reference appendix A-106.
Date Shipped	5	N	Julian date (YYDDD).

APPENDIX B-197

MOFAST SORTER INITIAL INPUT ENTRY FORMAT

1. PURPOSE

The CRT formats contained in this appendix will reflect the data elements that an operator may be required to enter on the first operator, sorter entry.

2. REFERENCES

a. Appendix A-72

b. Appendix A-103

c. Appendix D-140

d. Appendix E-219 P, Part A

3. DATA ELEMENTS

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1) or packing documentation.
Check Digit	1	N	MRO (DD Form 1348-1) or packing documentation.
Container Number	1 to 3	N	MRO (DD Form 1348-1) or packing documentation.
Container Type	2	A/N	MRO (DD Form 1348-1) or packing documentation. If container type is CT (carton), the field may be omitted.
Final Code	1	A	MRO (DD Form 1348-1) or packing documentation. C - Complete final container. E - Exception input required. Blank - Not final container.
Single Line Indicator	1	A	Enter X if line item is to be converted to a single line shipment unit; otherwise, leave blank. Must be used in conjunction with an 11-position SU Number.

APPENDIX B-198

MOFAST SORTER EXCEPTION INPUT FORMATS

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator may be required to enter on exception input at the sort rack station.

2. REFERENCES

a. Appendix A-104

b. Appendix D-141

c. Appendix E-219 P, Part B

3. DATA ELEMENTS

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Type Input	1	A	If used, must be a Q or M. Q is used for single line exception processing; M is used for missing line items and/or quantity changes when shipment unit is packed in one container.
Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1) or packing documentation.
Field Separator	1	A/N	Must be semicolon or comma.
Check Digit	1	N	MRO (DD Form 1348-1) or packing documentation.
Container Number*	1 to 4	N	MRO (DD Form 1348-1) or packing documentation. If line item is packed in consecutive containers, separate the container numbers by container separator.

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Container Separator*	1	A/N	If needed, must be a dash (-). Used to separate the low and high container number when a line item is packed in consecutive containers.
Container Identification*	1	A	Must be a C and must follow last container number.
Line Item Number	1 to 4	N	MRO (DD Form 1348-1) or packing documentation. A line item number is entered for each line item in the container.
Quantity Exception	1 to 5	N	MRO (DD Form 1348-1) or packing documentation. Represents quantity shipped. Needed only if quantity shipped is an exception to that ordered. Entered for all line items with exception quantity shipped.
Quantity Action Code	1 or 2	A	Used if quantity exception entered. Must be P, DB, DC, DD, DE, DG, DJ, DK, or DT. See appendix A-42.
Final Entry Code	1	A	Final entry code must be F or M. F = Final entry. M = More line items to be accounted for.

*Container data not required with Type Q or M input.

APPENDIX B-199

MOFAST SORTER INQUIRY/RELEASE SHIPMENT UNIT FORMATS

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator may be required to enter on the sorter release system.

2. REFERENCE

Appendix E-219 P, Part C.

3. DATA ELEMENTS

a. Release a line from the sorter

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Sorter Line Number	1 or 2	N	MOFAST sorter inquiry system.
Release Option Code	1	A	N = Line release only (for multisorter line SU). N must be entered on all but one of the sort lines released.

b. Inquire the complete contents of the sorter

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Inquiry Option Code	2	A	Must be SS.

c. Inquire a specific line

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Inquiry Option Code	2	A	Must be SL.
Sorter Line Number	1 or 2	N	Must be 1-99 (SBSU). Must be 12-97 (SGSG). Must be 1-71 (SGMT).

d. Inquire a specific consignee

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Inquiry Option Code	2	A	Must be SC.
Consignee	6	A/N	MRO (DD Form 1348-1)

e. Inquire a specific priority, (1, 2, or 3)

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Inquiry Option Code	2	A/N	First position must be S. Second position must be a 1, 2, or 3 depending on priority.

f. Inquire all lines in F status for a specific destination AAC

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Inquiry Option Code	2	A	Must be SP.
Destination AAC	6	N	MRO (DD Form 1348-1)

g. Inquire all lines for a specific destination AAC

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Inquiry Option Code	2	A	Must be SR.
Destination AAC	6	N	MRO (DD Form 1348-1)

h. Inquire all lines in a I status

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Inquiry Option Code	2	A	Must be SD.

APPENDIX B-200

GUARANTEED TRAFFIC/SMALL PARCEL RATE BASE FILE MAINTENANCE

1. PURPOSE

This file provides the capability to maintain the Guaranteed Traffic/Small Parcel Carrier Rate Base File. The formats in this appendix reflect the data elements that are to be maintained.

2. REFERENCES

a. Appendix E-109 P

b. Appendix F-194, Parts 11 and 12

3. DATA ELEMENTS

a. Rates Per Hundred

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Carrier	4	A/N	MTMC Carrier List.
Rate Group	3	A	A locally assigned code used to identify an SPLC or regional grouping.
Type Service	1	A	A locally assigned code used to differentiate between types of service for a carrier.
Rates (Repeat up to 16 times)			
Weight	5	N	Enter maximum weight for each weight group.
Rate	5	N	Enter dollar and cents without decimal point for each weight group.
Number of Flat Rates	2	N	Enter number of rate groups to be used as minimum charges, if any.

b. Small Carrier Rates

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Carrier	4	A/N	MTMC Carrier List.
Weight	3	N	The Weight for which the rates apply.
Type Service	1	N	A locally assigned code used to differentiate between types of service for a carrier. (First or second day delivery rates, etc.)
Rates (Repeat up to 12 times)			
Zone	1	A/N	A locally assigned code used to identify an SPLC or regional grouping.
Rate	5	N	The actual charge for the zone and weight being entered.

c. Small Carrier Zone Table

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Carrier	4	A/N	MTMC Carrier List.
Area/Zone (Repeat up to 68 times per display)			
Area	6	N	Enter a two, four or six position SPLC code. The codes must be entered in descending order and if a two or four position SPLC is entered, the following asterisks must be blanked out.
Zone	1	A/N	A locally assigned code used to establish a relationship between a regional grouping and a rate base.

d. SPLC Rate Group Table

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
Carrier	4	A/N	MTMC Carrier List.
SPLC/Group (Repeat up to 53 times per display)			
SPLC	6	N	Enter a two, four or six position SPLC code. The codes must be entered in descending order. If a two or four position SPLC code is entered, the following asterisks must be blanked out.
Group	3	A	A locally asigned code used to establish a relationship between a regional grouping and a rate base.

best copy available

APPENDIX B-201

MOFAST SORTER INQUIRY FORMATS
PART A
MOFAST SORTER CONTENTS INQUIRY

1. PURPOSE

To describe the CRT format used to inquire the sorter to determine length and status of the freight on the sorter lines.

2. REFERENCES

a. Appendix D-142

b. Appendix E-219 P, Part E

c. DLAM 4745.1

3. DATA ELEMENTS

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Alpha Code	1	A	Enter A to display length of freight on the sorter lines. Enter B to display status of freight on the sorter lines.

APPENDIX B-201

MOFAST SORTER INQUIRY FORMATS
PART B
MOFAST SORT RACK STATUS-PRIORITY INQUIRY

1. PURPOSE

The input format data element shown below will be entered by a CRT operator and can be obtained from appendix A-102.

2. REFERENCES

a. Appendix A-102

b. Appendix E-219 P, Part D

c. DLAM 4745.1

3. DATA ELEMENTS

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Status Code	1	A	Enter the desired sort rack status code or blank. (Reference appendix A-102.)

APPENDIX B-202

MOFAST OTHER THAN SORTER INPUT, INITIAL ENTRY FORMAT

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator may be required to enter on the other than sorter input station.

2. REFERENCES

a. Appendix A-72

b. Appendix D-146

c. Appendix E-221 P, Part A

3. DATA ELEMENTS

Five types of input may be processed at this station; Consolidated Pack (CP), Multicontainer (MC), Odd Container (OC), Oversize Dimension (OS), and Special GBL (S, X).

a. Consolidated Pack (CP)

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Process Code	2	A	Must be CP.
Shipment Unit Number	7, 11, or 13	N	MRO (DD Form 1348-1).
Check Digit	1	N	MRO (DD Form 1348-1).
Container Type	2	A/N	See appendix A-72.
Container Weight	1 to 5	N	MRO (DD Form 1348-1) (pounds).
Container Cube	1 to 5	N	MRO (DD Form 1348-1) (9999.9) (cubic feet).
Pallet/Skid Code and weight	1A + 1 to 5 N	A/N	MRO (DD Form 1348-1) (p12345).
Non-Mils TCN	14	A/N	Assigned by consolidation packer.

b. Multicontainer (MC)

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Process Code	2	A	Must be MC.
Special GBL Code	1	A	Must be S, X or blank.
GBL Number	8	A/N	Used to assign SU to a specific GBL.
Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1).
Check Digit	1	N	MRO (DD Form 1348-1).
Container Number Low	1 to 4	N	MRO (DD Form 1348-1).
Container Number High	1 to 4	N	MRO (DD Form 1348-1).
Type Container	2	A/N	See appendix A-72.
Weight	1 to 5	N	MRO (DD Form 1348-1) (pounds).
Cube	1 to 5	N	MRO (DD Form 1348-1) (9999.9) (cubic feet).
Final Code	1	A/N	On container.
Pallet/Skid Code and Weight	1A-1 to 5 N	A/N	MRO (DD Form 1348-1).
Piece Count	1 to 4	N	MRO (DD Form 1348-1).
Single Line Indicator	1	A	Enter X if line item is to be converted to a single line shipment unit; otherwise, leave blank. Must be used in conjunction with an 11-position SU number.

c. Odd Container (OC)

Same as MC except do not enter container number high and process code is OC.

d. Oversize Dimension (OS)

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Process Code	2	A	Must be OS.
Shipment Unit Number	7, 11, or 13	N	MRO (DD Form 1348-1).
Length	1 to 3	N	MRO (DD Form 1348-1) (inches).
Check Digit	1	N	MRO (DD Form 1348-1).
Width	1 to 3	N	MRO (DD Form 1348-1) (inches).
Height	1 to 3	N	MRO (DD Form 1348-1) (inches).

APPENDIX B-203

MOFAST OTHER THAN SORTER EXCEPTION INPUT

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator may be required to enter on exception input at the OTHER INPUT station.

2. REFERENCES

a. Appendix A-104

b. Appendix E-221 P, Part B

3. DATA ELEMENTS

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit Number	7, 11 or 13	N	MRO (DD From 1348-1) or packing documentation.
Field Separator	1	A/N	Must be semicolon or comma.
Check Digit	1	N	MRO (DD Form 1348-1) or packing documentation.
Container Number*	1 to 4	N	MRO (DD Form 1348-1) or packing documentation. If line item is packed in consecutive containers, separate the container numbers by container separator.
Container Separator*	1	A/N	If needed, must be a dash (-). Used to separate the low and high container number, when a line item is packed in consecutive containers.
Container-ID*	1	A	Must be a C and must follow last container number.
Line Item Number	1 to 4	N	MRO (DD Form 1348-1) or packing documentation. A line item number is entered foreach line item in the container.

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Quantity Exception	1 to 5	N	MRO (DD Form 1348-1) or packing documentation. Represents quantity shipped. Needed only if quantity shipped is an exception to that ordered. Entered for all line items with exception quantity shipped.
Quantity Action Code	1 or 2	A	Used if quantity exception entered. Must be P, D_, DC, DD, DE, DG, DJ, DK, DL, DM, DT or see appendix A-104.
Final Entry Code	1 or 2	A	Final entry code must be F or M. F = Final Code. M = More line items to be accounted for.
Type Input	1	A	If used must be a M, Q, S or X. M = Exception input for missing line items and/or quantity changes when shipment unit is packed in one container. Q = Single-line exception processing. S = Used for exception input when assigning a shipment unit to a unique GBL. X = Exception input when assigning a shipment unit to an established GBL. NOTE: The X and S options need only final entry when using final code (F).
Government Bill of Lading	8	A/N	Used with type input code X, when assigning a shipment unit to an established GBL.

*Container data are not required with Type Q or M input.

APPENDIX B-204

MATERIEL RELEASE CONFIRMATION CARD (MILITARY SERVICE-OWNED MATERIEL)

1. This card (MRC), prepared on DD Form 1348m, DoD Single Line Item Requisition System Document, is internally generated by the Defense Supply Center when change of ownership actions for in-storage materiel are processed by the DSC. Its purpose is to make "supply action" information against Advice Codes 8D through 8G Requisitions and Shipping Directives available in the Requisition Control and Status Record.

2. The MRC also is originated by the distribution depot on completion of segregation action directed by a Stock Segregation Notice (SSN). It is sent to DSC to complete the Requisition Control and Status Record. The preparation of this card by the defense depot is UAIS.

3. The following are the fields in the transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter ARO.
Routing Identifier Code (To)	4-6	Enter the RIC of the DSC.
Media and Status Code	7	Perpetuate the M&S Code from the issue source document/SSN.
National Stock Number	8-20	Enter the NSN.
	21-22	Perpetuate from source document.
Unit of Issue	23-24	Enter the UI abbreviation.
Quantity	25-29	Enter the quantity issued/segregated preceding significant digits with zero(s).
Reversal	(25)	Enter or X punch to cancel or reverse the transaction.
Document Number	30-43	Perpetuate the MILSTRIP document number from the issue source document/SSN.
Suffix Code	44	Enter the MILSTRIP suffix code; otherwise, leave blank.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Supplementary Address	45-50	Perpetuate the MILSTRIP supplementary address from the issue source document/SSN; otherwise, leave blank.
Signal Code	51	Perpetuate the MILSTRIP signal code from the issue source document/SSN; otherwise, leave blank.
Fund Code	52-53	Perpetuate the MILSTRIP fund code from the issue source document/SSN; otherwise, leave blank.
Distribution Code	54-56	Perpetuate the MILSTRIP distribution code from the issue source document/SSN; otherwise, leave blank.
Project Code	57-59	Perpetuate the project code from the issue source document/SSN; otherwise, leave blank.
Priority Code	60-61	Perpetuate the priority code as shown on the issue source document/SSN.
Date	62-64	Enter the date custodial accountability is established (date of activity)/segregation is completed.
Blank	65-73	Leave blank.
Shipping Activity	74-76	Enter the RIC of the distribution depot storing the materiel.
Blank	77-80	Leave blank.

APPENDIX B-205

FREIGHT DESCRIPTION FILE - TELEPROCESSING INQUIRY/UPDATE FORMAT

1. PURPOSE

This appendix identifies the data elements necessary to access the various on-line Freight Description File (FDF) data entry and inquiry formats.

2. REFERENCES

a. Appendix D-139

b. Appendix E-229 P

3. DATA ELEMENTS

a. FDF section format initialization data requirements

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Section Codes	2	A	Enter Section Codes as follows: NM - Access to NMFC Inquiry/ Update displays. RP - Access to optional report display. TM - Access to NMFC optional transmission display. See note.

NOTE: Section Code TM is available at the FDF Manager installation only.

b. NMFC data elements (Section Code NM)

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
ACTION	1	N	Enter the following Action Codes: A - Add a record. C - Change a record. D - Delete a record. I - Inquire a record.
NMFC	6	N	Enter MTMC approved 6-position National Motor Freight Classification Code.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
LTL KEY	1	A/N	Enter applicable LTL code (appendix A-49) for NMFC description. Leave blank if Mode is Q.
REC-SEQ	2	N	Enter 2-position record sequence code. Enter zeros when record sequence not required.
MODE	1	A/N	Enter B to identify basic Freight Description. Enter applicable mode of shipment code (appendix A-17).
TARIFF	10	A/N	Enter tariff number when a tariff specifies a special description requirement for NMFC. Zero fill when not required.
DEL-DTE	5	N	Enter Julian date record to be deleted. Use with Action Code D.
ENT-DTE	5	N	Computer assigned date of last update transaction against the NMFC record.
STATUS	1	A	Computer assigned code of last transaction against NMFC record. A - Record added. C - Record changed. D - Record deleted. S - Record suspended pending FDF. Manager confirmation.
UFC-SFX	7	N	Enter valid UFC and suffix. Do not preface with U. Leave zero filled when not required.
COMMODITY	1	A	Enter code when mode or tariff descriptions exist for NMFC/Suffix as follows: T - Tariff description. M - Mode description. C - Tariff/Mode description. Leave asterisk when basic description is sufficient.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
LTL	1	A/N	Enter applicable LTL code per appendix A-49 for NMFC description.
NIIN-SCAN	1	A	Enter code when NIIN description is required to supplement NMFC description. Enter asterisk to delete existing code. G - NIIN description required. M - NIIN/Mode description required.
SEQ-FLG	1	A	Enter X in dummy record to indicate locator suffix/record sequence match required.
DENSITY	6	N	Enter high density parameter (pounds/cubic foot) applicable to NMFC record. Zero fill when not applicable.
VALUE	6	N	Enter item valuation amount applicable to NMFC Description. Zero fill when not applicable.

c. Optional Reports Data Elements (Section Code RP).

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Reports	1	A	Enter X in field position to the left of the report.

d. NMFC Optional Transmission Data Elements (Section Code TM) (FDF Manager only).

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
NMFC	6	N	Enter National Motor Freight Classification number to be transceived.
LTL KEY	1	A	Enter NMFC LTL code when applicable.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
REC-SEQ	2	N	Enter 2-position NMFC record sequence code when applicable.
MODE	1	A/N	Enter NMFC mode of shipment code.
TRANSMISSION TO	1	A	Enter X in field position to the left of the type transmission desired. Note: If transmission is desired to more than 4 depots, "All of the Following" must be flagged.

APPENDIX B-206

MOFAST PARCEL POST SPECIAL HANDLING FORMAT

1. PURPOSE

This format is used for processing special Parcel Post (PP) shipments (registered, insured, certified, weapon system pouch, international mail, and Foreign Military Sales with Notice of Availability).

2. REFERENCES

a. Appendix A-104

b. Appendix A-105

c. Appendix D-165

d. Apendix E-217 P

3. DATA ELEMENTS

The Parcel Post special handling data elements are as follows:

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Completion Code	1	A	C - Complete line item. M - Missing line item. Q - Quantity change.
Shipment Unit Number	8	N	MRO (DD Form 1348-1).
Shipping Units Line Number	4	N	MRO (DD Form 1348-1).
Check Digit	1	N	MRO (DD Form 1348-1).
Register Number	1	N	MRO (DD Form 1348-1).
Parcel Post Code (GBL ID Code)	1	A	Must be C, I or R.
Quantity Amount	5	N	MRO (DD Form 1348-1).
Quantity Action Code	2	A	Reference appendix A-104.

APPENDIX B-207

MOFAST EXCEPTION MRO ENTRY FORMAT (MAIL, TWX, TELEPHONE MRO REQUEST)

1. PURPOSE

To show CRT data entries required for mail, TWX, telephone MRO, exception processing, and Carrier Performance Intransit Analysis Report Request and modification processes.

2. REFERENCES

a. Appendix A-100

b. Appendix D-163

c. Appendix E-234 P, Parts A and C

3. DATA ELEMENTS

a. CA entry

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Entry Code	2	A	Must be CA.
Consignee	6	A/N	Enter consignee from MRO or shipping documentation.

b. CB, CC, CD, CE, CF, CO, CQ or CZ entries:

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Entry Code	2	A	Enter CB, CC, CD, CE, CF, CO, CQ or CZ.
Shipment Unit Number	7, 11, or 13	N	MRO or shipping documentation.
Check Digit	1	N	MRO or shipping documentation.
Line Item	1 to 4	N	MRO or shipping documentation
Quantity Canceled	1 to 5	N	Quantity canceled (CD entry only.)

c. SC entry

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Entry Code	2	A	Must be SC.
Functional Routing Code	2	A	FRC of requesting organization.
Document Number	14-15	A/N	MRO or shipping documention.

d. UA entry

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Entry Code	2	A	Must be UA.
ZBM, ZEN, ZVW, or TK4 Data	80	A/N	Enter 80-position ZBM, ZEN ZVW or TK4.

e. CL entry

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Entry Code	2	A	Must be CL.
SU/Line Number	11 or 13	N	MRO or shipping documentation.
Check Digit	1	N	MRO or shipping documentation.

APPENDIX B-208

MOFAST LINE ITEM, DOCUMENT NUMBER, MRO STATUS INQUIRY

1. PURPOSE

This program validates and processes inquiries for MRO status by document number and Shipment Unit (SU)/Line Item (LI) numbers.

2. REFERENCES

a. Appendix D-163

b. Appendix E-234 P, Part B

3. DATA ELEMENTS

a. Inquiry by SU/LI

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Code	2	A	Must be SA.
Field Separator	1	A/N	Must be comma.
Shipment Unit/Line Item	11 or 13	N	Eleven-digit SU/LI number or 13 digit SU/LI/Partial number.

b. Inquiry by document number

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Code	2	A	Must be SB or SC.
Field Separator	1	A/N	Must be comma.
Document Number	14 or 15	A/N	MRO (DD Form 1348-1) document.

APPENDIX B-209

STOCK SEGREGATION NOTICE CARD

1. This card (SSN), prepared on DD Form 1348m, DoD Single Line Item Requisition System Document, is originated by the DSC and is the document by which the DSC notifies the distribution depot to select the recorded quantity of commingled stock, and store in segregated storage under the accountability and direct control of the Military Service ICP indicated in pos. 78-80 of the SSN card.

2. The SSN is treated as a substitute MRO by the distribution depot in responding to the DSC. Confirmation, warehouse denial, cancellation, and followup procedures applicable to MROs are likewise applicable to SSNs.

3. The following are the fields in the transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CNS.
Routing Identifier Code (To)	4-6	Enter the RIC of the distribution depot which is to take the action.
Media & Status Code	7	Perpetuate the M&S Code from the issue source document.
National Stock Number	8-20	Enter the NSN.
Submission Time	21-22	Enter submission time.
Unit of Issue	23-24	Enter the UI abbreviation.
Quantity	25-29	Enter the quantity to be segregated, preceding significant digits with zero(s).
Document Number	30-43	Perpetuate the MILSTRIP document number from the issue source document.
Suffix Code	44	Enter the MILSTRIP suffix code; otherwise, leave blank.
Supplementary Address	45-50	Perpetuate the MILSTRIP supplementary address from the issue source document; otherwise, leave blank.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Signal Code	51	Perpetuate the MILSTRIP signal code from the issue source document; otherwise, leave blank.
Fund Code	52-53	Perpetuate the MILSTRIP fund code from the issue source document; otherwise, leave blank.
Distribution Code	54-56	Perpetuate the MILSTRIP distribution code from the issue source document; otherwise, leave blank.
Project Code	57-59	Perpetuate the MILSTRIP project code from the issue source document; otherwise, leave blank.
Priority Code	60-61	Perpetuate the UMMIPS issue priority designator from the issue source document.
Delivery Date	62-64	Perpetuate the Required Delivery Date (RDD) from the issue source document or enter the Priority Delivery Date (PDD).
Advice Code	65-66	Perpetuate the advice code from the issue source document.
Routing Identifier Code (From)	67-69	Enter the RIC of the DSC originating the SSN.
Ownership Code	70	Perpetuate the ownership code from the issue source document.
Condition Code	71	Perpetuate the condition code from the issue source document.
Management Code	72	Enter management code; otherwise, leave blank.
Type of Pack Code	73	Enter the type of pack code for subsistence only.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Blank	74-77	Leave blank.
Routing Identifier Code	78-80	Enter the RIC of the Military Service ICP which is to maintain accountability for the segregated quantity.

APPENDIX B-210

ASSET STATUS CARD

1. This card is prepared on a general purpose card, and is used by the DSC twice each year to report asset data to a distribution depot on Service ICP owned materiel recorded on the DSC Inventory Control Record under Service ownership and DSC custodial accountability.

2. The following are the fields in the transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter DZA.
Routing Identifier Code (To)	4-6	Enter RIC of the Service ICP to which the asset report was sent.
Card Overflow	7	Enter Overflow Code A-Z (except I & O) beginning with the initial card for the stock number/ownership/condition/location, when any quantity exceeds the number of digits alloted.
National Stock Number	8-22	Enter NSN of the item.
Unit of Issue	23-24	Enter UI abbreviation.
On Hand	25-30	Enter the on hand balance (quantity) of Service-owned assets, preceding significant digits with zero(s).
Due-In	31-36	Leave blank.
Backorder	37-41	Leave blank.
Blank	42-66	Leave blank.
Routing Identifier Code	67-69	Enter the RIC of the DSC originating the asset report.
Ownership	70	Enter the applicable Ownership Code.
Condition	71	Enter Condition Code.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Blank	72	Leave blank.
Cutoff Date	73-76	Enter the applicable numerical cutoff date, e.g., 30 June 1964 is expressed as 4182.
Blank	77	Leave blank.
Storage Activity	78-80	Enter RIC of the distribution depot where Service assets are stored.

APPENDIX B-211

COMMISSARY SUPPORT MANAGEMENT DATA CARD

1. This card is prepared in order to establish Management Information Constants for each Commissary Support Cycle in the MOWASP MIS files.

2. One card must be input prior to the start of each cycle. This data is used to establish the various milestones against which actual performance will be measured.

3. The following are the fields in the transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter ZUW.
DICOMSS Type Item Code	4	Enter B or L.
Cycle Code	5	Enter A through Z.
Blank	6	Leave blank.
Cycle Date	7-11	Enter Cycle Date (YYDDD).
Blank	12	Leave blank.
Required Delivery Date	13-17	Enter RDD for Cycle (YYDDD)
Blank	18	Leave blank.
"No later than" Date	19-23	Enter "no later than" date for the cycle. This is the date that materiel must be received by in order that the RDD may be met (YYDDD).
Blank	24	Leave blank.
Federal Stock Numbers Due-In	25-29	Enter number of FSNs due-in for the cycle data obtained from DPSC by telephone.
Blank	30	Leave blank.
Tons Due-In	31-35	Enters Tons due-in from F-73 report, for the cycle. (Enter whole number only).

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Blank	36-78	Leave blank.
Action Code	79-80	Enter FX to establish header data or to change header data. Entry of FX will cause recomputation of cumulative totals and percentages. Enter FV to delete all reference to a particular cycle from the report. With FV, only cycle code are required entry. Unmatched cycle code will cause no change to report nor violation output.

4. VALIDATION

Violations will be listed on appendix F-85.

a. Action Code FV entries are not validated.

b. Action Code FX.

FIELD POSITION	VALIDATION	VIOLATION CODE
5	Alpha A through Z, other than I/O.	4K
7-11	All numeric (YYDDD) Julian date.	4L
13-17	All numeric (YYDDD) Julian date.	3W
19-23	All numeric (YYDDD) Julian date.	4M
25-29	All numeric, other than all zeros.	4N
31-35	All numeric, other than all zeros.	4O (alpha O)
79-80	Alpha and applicable to DIC ZUW.	CF

APPENDIX B-212

MOFAST TCMD, TRANSCEIVER DATA FORMATS AND CRT INPUT DISPLAYS

1. PURPOSE

Display required data elements for preparing TCMD output.

2. REFERENCES

a. Appendix D-158

b. Appendix E-228 P

c. Appendix F-182

d. DoD 4500.32-R, MILSTAMP

3. DATA ELEMENTS

a. Input by GBL number to generate TCMD display

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Entry Code	1	A	Enter T.
Government Bill of Lading Number	8	1A/ 7N	GBL number.

b. Input by Shipment Unit number to generate TCMD display

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Entry Code	1	A	Enter L (Logair), S (Surface Export), A (Air Export), Q (Quicktrans).
Shipment Unit Number	7, 11 or 13	N	Shipment Unit Number.
Check Digit	1	N	Shipment Unit Check Digit.

c. Shipment Unit Prime Data CRT Display

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifier Code	1-3	Enter T_0, 1, or 4 (per program).
Container Number	4-8	Air shipments output to air clearance authority leave field position 4 blank, enter FSC in field positions 5-8. Other shipments leave blank or enter SU Container Control Number. Consolidated shipments select predominante weight FSC.
Consignor	9-14	MOFAST Monitor Table and Control File.
Commodity Special Handling	15-19	Type input Code T and S use SU Water Commodity. Type input Code A, Q and L (blank) 15-17 and SU Air Commodity 18-19.
Air Dimension	20	Type A, Q and L only use Air Dimension Code A unless outsize flag is on, then operator must enter blank for others.
POE	21-23	Type input Code T and S use WPOE from Address File, unless: (1) WPOE is 104 or 304 any Type Cargo Code is other than A, E, G, M, N, O, P, R, T, V, W, X, Y, Z, or (2) WPOE is not 104 or 304 and Type Cargo Code is A, B, C, F, G, I, J, K, O, P, R, S, T, U, W, X or Y. Then use WPOE from SU record. Type Input Code A use APOE from Address File. Type Input Code L or Q use Logair or Quicktrans terminal from MOFAST Monitor Table plus parcel post zone other than 9.
POD	24-26	Type input T and S use WPOD from Address File. Type input Code L or Q and PP Zone other than 9 use CONUS Military Air Terminal from Address File. Otherwise, leave blank.

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Mode	27	Use mode from SU record.
Type PK	28-29	Use Type Container from Container data. If more than one type use MX.
TCN	30-44	SU Master TCN.
	45	SU partial indicator or X.
	46	X constant.
Ultimate Consignee	47-52	SU consignee except BBP flag Y select from first MRO using pos. 45-50 if pos. 51 equals J, K, L or M; otherwise, use pos. 30-35. Service Code B, D, P, K, T see MAPAD, DoD 5105.38-D.
Transportation Priority	53	SU Transportation Priority.
RDD	54-56	Use RDD from first LI record position 62-64 of MRO.
Project	57-59	Use project code from first LI record position 57-59 of MRO.
Day Shipped	60-62	Type input T and S use last 3-position of SU Date Shipped. Type input A and L must be input by operator.
Estimate Time of Arrival Code	63	Type input Code T and S use transit time from S/U record. Type A, Q and L must be input by operator.
TAC	64-67	TAC from SU record.
Pieces*	68-71	Total containers from SU record.
Weight*	72-76	Accumulated weight from SU record.
Cube*	77-80	Accumulated cube from SU record.

*If SU pieces, weight, or cube exceed the TCMD field size data must be input operator per DoD 4500.32-R, appendix F.

d. Outsize Dimension Data CRT Display

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifier Code	1-3	Enter T_5 (per program).
Container or Trailer No.	4-8	Same as Shipment Unit Prime Data.
Blank	9-14	Leave blank.
Basic Data	15-53	Same as shipment unit prime data card. Not repeated on CRT display.
Length in Inches	54-58	From oversize dimension record.
L	59	Program constant.
Width in Inches	60-62	From oversize dimension record.
W	63	Program constant.
Height in Inches	64-66	From oversize dimension record.
H	67	Program constant.
Pieces	68-71	Operator Entry per DoD 4500.32-R, appendix F.
Weight	72-76	Operator Entry per DoD 4500.32-R, appendix F.
Cube	77-80	Operator Entry per DoD 4500.32-R, appendix F.

e. Hazardous Trailer Card CRT Display

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifier Code	1-3	Enter TJ6 (per program).
Container or Trailer No.	4-8	Same as Shipment Unit Prime Data.
Blank	9-15	Leave blank.
L&S Group Code	16-17	Specific Item record in Freight Description File.

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Blank	18-19	Leave blank.
Basic Data	20-53	Same as shipment unit prime data card. Not repeated on CRT display.
National Stock Number	54-66	First line item record MRO.
Blank	67-70	Leave blank.
U.N. Class	71-72	Specific item record in Freight Description File.
Blank	73	Leave blank.
UN or NA	74-75	Use whichever is in Freight Description File.
UN or NA Number	76-79	Specific item record in Freight Description File.
Compatibility Group	80	0 (program constant).

f. Miscellaneous Information CRT Display

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifier Code	1-3	Enter T_9 (TX6 Army only).
Container or Trailer No.	4-8	
Blank	9-14	Leave blank.
Basic Data	15-53	Same as shipment unit prime data. Not repeated on CRT display.
Miscellaneous Information	54-79	Hazardous Description from Freight Description File for TJ9. NMFC Description from Freight Description File for TX9 for Type Input T and S with WPOD of TA1, TA2, or X--. Program provides data for some TX9s IAW appendix D-158; otherwise, this is entered by operator.
Sequence Number	80	Program provided.

NOTE: This format is repeated on the CRT to allow nine miscellaneous information cards.

g. SEAVAN Prime Data CRT Display. Operator entry data will be made in accordance with DoD 4500.32-R, appendix F.

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifier Code	1-3	Enter T_2 (per program).
Van Number	4-8	Operator entry.
Owner Abbreviation	9-12	Operator entry.
Size	13-14	Operator entry.
Commodity Code	15-19	Operator entry.
Blank	20	Leave blank.
POE	21-23	WPOE for SU consignee from the Address File.
POD	24-26	WPOD for SU consignee from the Address File.
Mode	27	V (program constant).
Type Pack	28-29	Operator entry.
SEAVAN TCN	30-46	Operator entry.
SEAVAN Consignee	47-52	SU consignee.
Transportation Priority	53	SU Transportation Priority.
Required Delivery Date	54-56	SU RDD.
Container Distribution	57	Operator entry.
Shipment Units	58-59	Operator entry.
Day Shipped	60-62	Last 3-positions of SU day shipped or operator entry.
Estimated Time of Arrival	63	Use Shipment Unit Transit Time.
Inside Cube of Van	64-67	Operator entry.
Pieces in Van	68-71	Operator entry.

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Weight of Contents	72-76	Operator entry.
Cube of Contents	77-80	Operator entry.

h. Miscellaneous Seavan Information CRT Display

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifier Code	1-3	T_9 (per program).
Basic SEAVAN Data	4-8	Same as SEAVAN Prime Data. Not repeated on CRT display.
ZIP Code of SEAVAN Origin	9-14	Operator entry or if not entered duplicate Water Commodity from T-2.
Temperature Range	15-19	Operator entry, refer only. Indicate actual temperature to maintain cargo preceded by F (e.g., F34XX) or temperature range (e.g., F3441); otherwise, use commodity code as specified in T-2.
Basic SEAVAN Data	20-26	Same as SEAVAN Prime Data. Not repeated on CRT display.
Blank	27	Leave blank.
Size Ordered	28-29	Operator entry or if not entered duplicate size from T-2.
Basic SEAVAN Data	30-53	Same as SEAVAN Prime Data. Not repeated on CRT display.
VN	54-55	Program constant.
SEAVAN Number	56-63	Operator entry.
SN	64-65	Program constant.
Seal Number	66-73	Operator entry.
Carrier	74-77	Operator entry.

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
MILVAN Beam Assembly	78-79	Operator entry.
Sequence Number 1	80	1 program provided.

NOTE: Four additional T_9 card formats with card sequence numbers 2 through 5 will be displayed to allow additional shipping information for the SEAVAN. Also, five T_9 card formats with card sequence numbers A through E will be displayed to provide stop off information, reference DoD 4500.32-R, appendix F.

i. Container Prime Data CRT Display

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifier Code	1-3	T_3 (per program).
Container Number	4-8	SU Container Control Number.
DoDAAC of Consolidating	9-14	MOFAST Monitor Table and Activity (Consignor) Control File.
Commodity Special Handling	15-19	SU Water Commodity.
Air Dimension	20	Blank.
POE	21-23	WPOE from the Address File.
POD	24-26	WPOD from the Address File.
Mode	27	SU Mode.
Type Pack	28-29	SU Type Pack.
Non Military TCN	30-46	S/U Master TCN.
Ultimate Consignee	47-52	Use SU Consignee unless Service Code is B, D, P, K, T, see MAPAD, DoD 5105.38D.
Transportation Priority	53	SU Transportation Priority.
Earliest RDD	54-56	SU RDD.
Project Code	57-59	Use Project Code from first line item record position 57-59 of MRO.

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Day Shipped	60-62	Use last 3-positions of SU Ship Date.
Estimated Time of Arrival	63	Use Shipment Unit Transit Table.
Blank	64-67	Leave blank.
One Piece	68-71	0001, program constant.
Gross Weight	72-76	Container Weight.
Gross Cube	77-80	Container Cube.

j. GBL Header Card for Batch Transmissions.

FIELD LEGEND	FIELD POSITIONS	SOURCE/EXPLANATION
Document Identifer Code	1-3	Always GBL.
Government Bill of Lading Number	4-11	TCMD Program.
TCMDS	12-16	Program Constant.
Total Number of TCNs on the GBL	17-19	TCMD Program.
Consignor	20-25	MOFAST Monitor and Control File.
Blank	26	Leave blank.
Date Shipment is Released to the Carrier	27-30	TCMD Program.
Port of Embarkation	31-33	TCMD Program.
Blank	34-80	Leave blank.

APPENDIX B-213

MOFAST INQUIRY, SHORT GBL RECORD

1. PURPOSE

The format input listed below can be used to inquire the short GBL file.

2. REFERENCES

Appendix E-238 P, Part J.

3. DATA ELEMENTS

FIELD LEGEND	NUMBER POSITIONS	TYPE	SOURCE/EXPLANATION
Government Bill of Lading Number	8	A/N	Routing slip.
Option Code	1	A	Enter alpha N following the GBL number when display of GBL shipment unit numbers is required. Leave blank when all GBL SU data are necessary.

APPENDIX B-214

INPROCESS SHIPMENT UNITS WITH CURRENT PDT/MDT

1. PURPOSE

To provide CRT visibility of MROs in MOFAST Status Codes of A or B which will be late if not offered to transportation on the current date. Process allows inquiry by warehouse.

2. REFERENCES

Appendix E-097 P

3. DATA ELEMENTS

FIELD LEGEND	NO. OF POS.	TYPE	SOURCE/EXPLANATION
SU/Line Number	11	N	MRO or Shipping Document.
Document Number	15	A/N	MRO or Shipping Document.
National Stock Number	13	A/N	MRO or Shipping Document.
Unit of Issue	2	A/N	MRO or Shipping Document.
Quantity	5	N	MRO or Shipping Document.
Warehouse Location	3	A/N	MRO or Shipping Document.
Project	3	A/N	MRO or Shipping Document.
Mode Code	1	A/N	Reference appendix A-17.
Status Code	1	A	Reference appendix A-102. A = Inprocess - No update Action B = Area Control Branch Exception Entry

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART B
MOFAST TAC INQUIRY

1. PURPOSE

The CRT Input formats listed below can be used to obtain inquiries of the Transportation Account Code (TAC) from MOFAST Data Base files.

2. REFERENCE

Appendix E-224 P, Part E

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Government Bill of Lading Number	8	A/N	Routing slip.
Transportation Account Code Sequence Number	4	N	Chronological sequence number counted from the TAC list on the page of the continuation sheets of a GBL.

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART C
MOFAST CONTAINER INQUIRY

1. PURPOSE

The input formats listed below can be entered by the CRT operator to obtain container and line item data in display format by Shipment Unit (SU) number.

2. REFERENCE

Appendix E-238 P, Part H

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Request	3	A/N	Enter SR1, SR2 or SR3 as outlined in appendix E-238 P.
Shipment Unit Number	7, 11 or 13	N	Enter SU number being queried. Obtain from MRO (DD Form 1348-1) or shipping document.
Check Digit	1	N	Obtain from MRO (DD Form 1348-1) or shipping document.
Line Item Number	4	N	Obtain from MRO (DD Form 1348-1) or shipping document. (Only used for SR3 inquiry.)

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART D
GBL CANCELLATION/ASSIGNMENT

1. PURPOSE

Show data required for GBL cancellation and assignment.

2. REFERENCE

Appendix E-225 P

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Code (type action)	1	A/N	A = Return to initial display. C = Cancel entire GBL or CBL. D = Cancel consolidated pack SUs from GBL/CBL record. N = Assign to a unique GBL. O = Assign to a unique CBL. S = Cancel a SU from a GBL/CBL. X = To assign to an existing GBL. Y = To assign to an existing CBL.
Government/Commercial Bill of Lading Number	1A & 7N	A/N	GBL or CBL number will not be required when using type codes O or N.
Shipping Unit Number	7, 11 or 13	N	Multiple SU numbers may be entered when using type codes X or Y. SU number is not required when using type code C.
Check Digit	1	N	Check digit.

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART E
MOFAST GENERAL UTILTIY

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator may be required to enter on the general utility station.

2. REFERENCE

Appendix E-238 P, Part B

3. DATA ELEMENTS

a. Remove occupied flag from the sorter file

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be A.
Sorter Line Number	1 or 2	N	See note.

b. Zero conveyor length accumulator on the sorter file

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be B.
Sorter Line Number	1 or 2	N	See note.

c. Regenerate shipment labels, DD Form 1387-1

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be C, F, or M.
Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1).

d. Regenerate route slip

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be D.
Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1).
Spur	2	A/N	Geographical Area/Spur File.

e. Delete complete data for a sort line from the sorter file

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be E.
Sort Rack Line Number	1 or 2	N	See note.

f. Update sorter file to Status F (one line only)

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be G.
Sort Rack Line Number	1 or 2	N	See note.

g. Add a shipment to the sorter file

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be H.
Consignee	6	A/N	MRO (DD Form 1348-1).
Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1).
Line Number	1 or 2	N	See note.

h. Generate shipment labels (stencils) in the Area Control Branches

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Enter requesting Area Control Branch number (1 through 5).
Shipment Unit Number	1, 11 or 13	N	MRO (DD Form 1348-1).

i. Block a sort line on the sorter file

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be K.
Sorter Line Number	1 or 2	N	See note.

j. Force conveyor length to overflow

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be W.
Sorter Line Number	1 or 2	N	See note.

k. Clear the the three sort line indicators in the SU record to zero

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Option Code	1	A	Must be J.
Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1).

NOTE: Applicable sorter line numbers vary with individual sorter configurations. Sorter line numbers are as follows:

DDOU 1-99
DDMT 1-71
DGSC 12-97

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART G
MOFAST CHECK DIGIT FORMAT

1. PURPOSE

This process operates in an on-line environment and provides the Check-Digit Number for any given Shipment Unit Number.

2. REFERENCES

a. Appendix E-238 P, Part G

b. DLAM 4745.1

3. DATA ELEMENTS

Data elements required to get check digit.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit Number	7	N	Enter any valid shipment unit number.

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART H
MOFAST CONSOLIDATION SECOND OPERATOR INPUT FORMATS

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator may be required to enter on consolidation input at the second operator station.

2. REFERENCES

a. Appendix D-169

b. Appendix E-222 P

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Container Control Number	5	A/N	Packing documentation.
Master Shipment Unit Number	7, 11 or 13	N	MRO (DD Form 1348-1) or packing documentation.
Check Digit	1	N	MRO (DD Form 1348-1) or packing documentation.
SUB-SU Number	7, 11 or 13	N	MRO (DD Form 1348-1) or packing documentation.
SUB-SU Check Digit	1	N	MRO (DD Form 1348-1) or packing documentation.
Option Code	1	A	Final Entry code must be F or M. A = Add. D = Delete. F = Final entry. M = More subshipment units to enter. U = Container data update.

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART I
SHIPMENT UNIT AND LINE ITEM FILE INQUIRY

1. PURPOSE

This process operates in an on-line environment to inquire the Shipment Unit (SU) File or Line Item (LI) File.

2. REFERENCES

a. Appendix E-233 P, Part D

b. DLAM 4745.1

3. DATA ELEMENTS

Data elements required to make an inquiry or update to the SU or LI files.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Enter - File	1	A	S = SU Inquiry L = LI Inquiry
Entry - Key	7, 11 or 13	N	SU/LI number (DD Form 1348-1).
Entry - Option	1	A	A = Container information. B = Lines with container data. C = Lines that are single-lined. D = Lines without container data. E = Cancellation Information. U = Update NMFC, LTL, GEO, Water-Comm, POE, W-POD or DEN.

APPENDIX B-215

MOFAST UTILITY PROGRAMS
PART J
MOFAST SINGLE LINE SHIPMENT UNIT FORMATS

1. PURPOSE

The CRT input-output formats contained in this appendix will reflect the data elements that an operator may be required to enter when single lining a line item or when reversing a previously single line item.

2. REFERENCES

Appendix E-238 P, Part C

3. DATA ELEMENTS

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit	7	N	MRO (DD Form 1348-1) or packing documentation.
Line Item Number	4	N	MRO (DD Form 1348-1) or packing documentation.
Check Digit	1	N	MRO (DD Form 1348-1) or packing documentation.
Reverse Action Code	1	A	When used, must be an R.

APPENDIX B-216

AREA CONTROL BRANCH FORMATS

1. PURPOSE

a. The data formats noted below are designed for use through remote Cathode Ray Tubes (CRT). Data entered via these formats will accomplish an update of shipment unit/line item record contained in the In-Process File.

b. Capability is provided to update hold codes, parcel post mode codes, extend or delete parcel post automatic clear date, process denial or cancellation actions, confirm parcel post shipments, update reportable quantity indicator, and process inquiries of the in-process and history files.

c. Four input formats are provided to accomplish the actions included in this process. Appropriate error messages will be displayed should the operator deviate from the prescribed entry formats. Appendix E-216 P provides a detailed explanation of the procedures required for this process.

2. REFERENCES

a. Appendix A-17

b. Appendix A-21

c. Appendix A-102

d. Appendix A-104

e. Appendix D-148

f. Appendix E-216 P

3. DATA ELEMENTS

a. Type A Formats - Updates SU/LI records with mode or hold code, extends or deletes parcel post Automatic Clear Date (ACD) and confirms parcel post shipments which have previously had the ACD deleted or have been converted from freight mode to parcel post.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Type Code	1	A	Must always be A.
Shipment Unit Number	7, 11, or 13 (see note)	N	MRO (DD Form 1348-1) block Y.
Check Digit	1	N	MRO (DD Form 1348-1) block R.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Mode	1	A	Enter G, H, 6, or 7. May be blank.
Parcel Post Code	1	A	Enter D to delete the ACD. Enter E to extend the ACD 1 day. May be blank.
Hold Code	1	A	Enter Appropriate Hold Code as noted in appendix A-21. May be blank.
Confirmation Code	1	A	Enter C to confirm a parcel post shipment. Leave blank when shipment confirmation is not desired.
Warehouse Location	3, 9 or 12	A/N	Enter identification of the warehouse that the MRO is being diverted to. May be blank, 3, 9 or 12 positions. Right-justified.

NOTE 1: If line item is not entered (7-position SU), all line items of the SU will be updated.

NOTE 2: If the line item is entered (11-position SU), the indicated line item will be single-lined.

NOTE 3: To make an update entry on a (13-position SU), the line item must have been previously partialed.

b. Type B Formats - Updates line item records with denial/cancellations/actions.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Type Entry Code	1	A	Must always be B.
Shipment Unit Number	11 or 13	N	MRO (DD Form 1348-1) block Y.
Check Digit	1	N	MRO (DD Form 1348-1) block R.
Quantity Shipped	5	N	MRO (DD Form 1348-1). Recap of quantity shipped. Enter zero for complete denial/cancellation.
Quantity Action Code	2	A	Action Code, appendix A-104.

NOTE: To make an update entry on a 13-position SU, the line item must have been previously partialed.

c. Type C Formats - Inquires SU/LI records.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Type Entry Code	1	A	Must always be C.
Shipment Unit Number	11 or 13	N	MRO (DD Form 1348-1) block Y.
or			
MRO Document Number	14 or 15	N	MRO (DD Form 1348-1).
Type Inquiry Code	1	A	A - To display SU line item status. B - To display MRO and SU line item status. C - Produce ZCT inquiry to MOWASP history.
Functional Routing Code	2	A	Enter functional routing code for inquiring ACB. Mandatory for Type C inquiry code.

d. Type D Formats - Updates SU records.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Type Entry Code	1	A	Must always be R.
Shipment Unit Line Number	11 or 13	N	MRO (DD Form 1348-1) block Y.
Check Digit	1	N	MRO (DD Form 1348-1) block R.

NOTE: To make an update entry on a 13-position SU, the line item must have been previously partialed.

APPENDIX B-217

TRANSSHIPMENT HISTORY DATA

1. PURPOSE

This data will be accessed by TCN and will display the data related to the TCN.

2. PROCEDURE

The following are data elements that will be assigned to the Transshipment History File.

FIELD LEGEND	NUMBER OF POSITIONS	EXPLANATION/INSTRUCTIONS
TCN	17	Source ATCMD.
Load Number	4	Source SU record.
Status	1	Source SU record.
Mode	1	Source SU record.
Van Number	8	Source load record.
Originating Consignor	6	Source load record.
Destination	6	Source load record.
Consignee	6	Source SU line record.
Van Size	2	Source load record.
Van Owner	4	Source load record.
Van Carrier	4	Source load record.
Seal Number	8	Source load record.
Vessel Name	10	Source load record.
Sail Date	5	Source load record.
POE	3	Source load record.
POD	3	Source load record.

FIELD LEGEND	NUMBER OF POSITIONS	EXPLANATION/INSTRUCTIONS
Date Received	5	Source Transshipment record.
Date Shipped	5	Source load record.
Pieces Shipped	5	Source SU record.
Weight Shipped	5	Source SU record.
Cube Shipped	5	Source SU record.
Lead T-2 TCN	17	Source load record.

3. VALIDATION

Computer processed output transaction.

APPENDIX B-218

DoDDS TCMD DATA

1. PURPOSE

The CMV data will be routed to DGSC for update to their status record and control of DoDDS shipments.

2. PROCEDURE

The following are the fields that will be transceived:

a. Card Sequence 1.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter DIC CMV.
Card Sequence	4	Constant 1.
Load Number	5-8	Source load record.
SEAVAN TCN	9-25	Source load record.
Owner Abbreviation	26-29	Source load record.
Size Van	30-31	Source load record.
Commodity Code	32-36	Source load record.
POE	37-39	Source load record.
POD	40-42	Source load record.
Mode	43	Source load record.
Type Pack	44-45	Source load record.
SEAVAN Consignee	46-51	Source load record.
Highest Transportation Priority	52	Source load record.
RDD	53-55	Source load record.
Content Distribution Code	56	S or single consignee, M for multiple consignees, if van is a stop off van enter the number of stops.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Number of Shipment Units in Van	57-58	Source load record.
Date Shipped	59-61	Source load record.
ETA	62	Source load record.
Inside Cube of Van	63-66	Source load record.
Pieces in Van	67-70	Source load record.
Weight of Contents	71-75	Source load record.
Cube of Contents	76-79	Source load record.
Blank	80	Source leave blank.

b. Card Sequence 2.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter DIC CMV.
Card Sequence	4	Constant 2.
Load Number	5-8	Source SU record.
TCN	9-25	Source SU record.
Vessel Name	26-35	Source load record.
Sailing Date	36-40	Source load record.
DoDACC of Shipping Activity	41-46	Source load record.
Commodity Code	47-51	Source SU record.
Type Pack	52-53	Source SU record.
Ultimate Consignee	54-59	Source SU record.
Transportation Priority	60	Source SU record.
RDD	61-63	Source SU record.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Project	64-71	Source SU record.
Stop-Off Number	67	Source SU record.
Pieces	68-71	Source SU record.
Weight	72-77	Source SU record.
Cube	77-80	Source SU record.

c. Card Sequence 3.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter DIC CMV.
Card Sequence	4	Constant 3.
Load Number	5-8	Source SU record.
TCN	9-25	Source SU record.
ATCMD Date Shipped	26-28	Source SU record.
Carrier	29-32	Source load record.
Van Number	33-40	Source load record.
TAC	41-44	Source SU record.
Date Materiel Received	45-49	Source TCMD history data.
Blank	50-80	Enter blanks.

3. VALIDATION

Computer processed output transaction.

APPENDIX B-219

MOFAST RELEASE REQUEST FORMAT

1. PURPOSE

The CRT input formats listed below can be used to prepare the Release Transceiving Cards.

2. REFERENCES

a. Appendix E-232 P

b. DLAM 4745.1

3. DATA ELEMENTS

The data elements listed below are required for the Release Request Format operation and are used either alone or in combinations with each other for LM1, LM2, LM3, LM4, LM6, LM7, LMX or LMO type request.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Type Request Code	3	A/N	Appendix E-232 P.
LM1 DATA:			
Export-Domestic Indicator	1	A/N	If export indicator, pos. 3 of MRO, (DD Form 1348-1) is numeric, enter E. If domestic indicator, pos. 3 of MRO, (DD Form 1348-1) is alpha, enter D.
Priority	1	N	DD Form 1348-1, block B, line 1.
Shipment Unit Numbers	13	N	One to 5 SU numbers can be entered. MRO (DD Form 1348-1) or routing slip.
Date	3	N	Current Julian date of release request.
Lading Terms	1	A/N	DLAR 4500.3, Figure 202-8.
SEAVAN	1	A	Must be V or blank. Use only when SEAVAN applies.
Number SEAVANS	1	N	Self-explanatory.
Daily Flow Factor	2	N	DLAR 45 0.3, Figure 202-8.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Uniform Freight Classification	8	N	Freight Description File-Reference DLAR 4500.3, Figure 202-8 for proper entry format. Used for rail shipments. Repeat for each shipment unit number entered.
Remarks	232	A/N	Four cards are maximum with a maximum of 58 characters per card available for comments.
LM2 DATA:			
Number Transient References	1	N	DLAR 4500.3, Figure 202-8. Enter one for each shipment unit number.
Type Pack Code	2	A/N	DoD 4500.32-R, Volume I, appendix B-88. One for each shipment unit number.
LM3 DATA:			
Remarks	60	A/N	Sixty characters can be entered per card and as many cards as needed may be entered.
LM4 DATA:			
Credit Commodity	6	A/N	DLAR 4500.3, Figure 202.8.
Shipping Point	2	A/N	DLAR 4500.3, Figure 202-8.
Shipping Point Name	10	A/N	DLAR 4500.3, Figure 202-8.
Date Available	4	N	DLAR 4500.3, Figure 202-8.
Weight	4	N	DLAR 4500.3, Figure 202-8.
Rate	4	N	DLAR 4500.3, Figure 202-8.
Cars Ordered	1	N	DLAR 4500.3, Figure 202-8.
Cars Furnished	1	N	DLAR 4500.3, Figure 202-8.
Inbound Routing Remarks	28	A/N	Self-explanatory.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
LM5 DATA:			
Remarks	60	A/N	Self-explanatory.
LM6 DATA:			
Type Pack	2	A/N	DLAM 4500.3, Figure 202-8.
Length	3	N	DLAM 4500.3, Figure 202-8.
Width	3	N	DLAM 4500.3, Figure 202-8.
Height	3	N	DLAM 4500.3, Figure 202-8.
Item Description	40	A/N	DLAM 4500.3, Figure 202-8.
Remarks	60	A/N	Self-explanatory.
LM7 DATA:			
Remarks	60	A/N	Self-explanatory.

APPENDIX B-220

TRANSSHIPMENT LOAD/TCN CROSS-REFERENCE DATA

1. PURPOSE

This data will be accessed by Load Number and will display all TCNs that were assigned to that transshipment load.

2. PROCEDURE

The following data elements that will be assigned to Transshipment Load/TCN Cross-Reference File.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/ INSTRUCTIONS
Load Number	4	Source load record.
TCN	17	Source SU record. This field can occur 150 times depending on the number of TCNs assigned to the load.

3. VALIDATION

Computer processed output transactions.

APPENDIX B-222

MOFAST FORCE CLOSURE FORMAT

1. PURPOSE

Provide CRT input formats to process Action Code GC or GX Force Closure actions. This allows force closure actions to be processed in an on-line teleprocessing environment.

2. REFERENCES

a. Appendix D-167

b. Appendix E-252 P

3. DATA ELEMENTS

Enter the following data elements separated by commas.

FIELD LEGEND	NUMBER OF POSITIONS	TYPE	SOURCE/EXPLANATION
Shipment Unit/Line Item (SU/LI) Number	11	N	Enter 11-position SU/LI number of items being force closed.
Check Digit	1	N	Enter SU check digit shown in block R of MRO.
Action Code	2	A	Enter GC or GX: GC - To force close item partially canceled. GX - To force close MRO.
Document Control Code	1	N	Enter 1 or 2: 1 - Closure action by storage. 2 - Closure action by transportation.

APPENDIX B-223

SPD WORK COUNT RECORD

1. This record format is computer generated as a result of specific work functions accomplished in the Receiving Storage, and Issues areas.

2. The record is processed against the SPD Master Record (appendix B-224) for validation of the SPD Record Code and Warehouse Code, and subsequent consolidation of counts and creation of the DIC YHJ record to APCAPS.

3. The following record fields apply:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Constant XMS.
SPD Code	4-6	Mandatory entry (see appendix D-214).
Warehouse Code	7-9	The first three positions of the Warehouse Location Code.
Receiving Site Code or Commodity Manager	10	The second position of Receiving Site Code or Commodity Manager.
Blank	11-20	Self-explanatory.
Type Storage Code	21	Third position only (see appendix A-45).
Production Count	22-26	Will always be 00001.
Blank	27-36	Self-explanatory.
Julian Date	37-40	Current Julian date (Yr-Day).
Shipment Unit Number	41-47	Self-explanatory.
Line Item Number	48-51	The number of the line within the Shipment Unit.
Partial Number	52-53	The number of the partial L/I No.
Employee Identification	54-58	Employee's payroll number.
Blank	59-80	Self-explanatory.

4. Validation is unnecessary as this is all computer generated.

NOTE:

a. DIC XMS records without a matching Master Record will print out on Report Number UWRG620A, will be considered rejects, and will not be included in DIC YHJ output.

b. A daily DIC YHJ and DIC XMS Summary will print out on Report Number UWRG620X.

APPENDIX B-224

SPD MASTER RECORD

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Constant XMM.
Warehouse Code	4-6	Enter the first three positions of the Warehouse Locations Code.
SPD Code	7-9	Mandatory entry (appendix D-214).
Receiving Site Code or Commodity Code	10	The second position of Receiving Site Code or Commodity Code. Enter, if applicable (appendix A-44).
Maintenance Code	11	Enter the type Action required: A - Establish a new record. C - Change an existing record. D - Delete an existing record.
Work Center Code	12-16	Mandatory entry. Enter organization code.
Cost Code	17-25	Mandatory code.
SPD Standard Number	26-29	Mandatory entry.
Added Data	30-34	Optional entry.
Blank	35-80	Leave blank.

NOTE:

a. If a change is required to the SPD Record Code and/or Warehouse Code, you must delete the old record and establish a new record; otherwise, do a normal Change action. Data fields 1-10 MUST match an existing record.

b. As a result of DIC XMM input, invalid records will print out on Report Number UWRG600A, followed by a Master Record print, Report Number UWRG600B.

APPENDIX B-225

DISPOSAL RELEASE CONFIRMATION/STATUS CARD

1. PURPOSE

This card format is used to provide DSC/ICP:

a. Confirmation of the completed shipment action on DROs (appendix B-32).

b. Response to a DRO Followup Request (appendix B-227). When distribution depot has the DRO in process, BA status is entered; when there is no record of DRO, BG status is entered.

2. PROCEDURE

The following are the fields in the transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter DIC ARJ for release of quantity requested. Enter DIC ARK for release of quantity greater than requested. Enter DIC ARL for release of quantity less than requested. Enter DIC AEJ for supply status in response to AFJs and ACJs from DSC.
Routing Identifier Code	4-6	Enter RIC of the supply source from which the DRO or followup was received.
Media and Status Code	7	Leave blank.
Stock Number	8-20	Enter stock number of the item released.
Blank	21-22	Leave blank.
Unit of Issue	23-24	Enter the catalog UI abbreviation.
Quantity	25-29	Enter quantity released. Precede significant digits with zero(s).

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Number	30-43	Enter document number as shown in the DRO.
Suffix Code	44	Leave blank.
Retention Quantity	45-51	Enter quantity actually retained.
Fund Code	52-53	Perpetuated from DRO.
Distribution Code	54	Perpetuated from DRO.
Blank	55-56	Leave blank.
Estimated Shipping Date	57-59	Enter date delivered/shipped to or Date Shipped DRMO. When used in response to followup and shipment has not occurred, enter Estimated Shipping Date.
Blank	60-61	Leave blank.
Precious Metal Identification Code	62	Enter applicable code (appendix A-127).
ADPE Identification Code	63	Enter applicable code (appendix A-125).
Disposal Authority Code	64	Enter M, N or R (appendix A-126).
Supply Status	65-66	Enter supply status code if applicable; otherwise, leave blank.
Routing Identifier Code	67-69	Enter RIC from.
Ownership/Purpose Code	70	Enter appropriate code.
Materiel Condition Code	71	Enter appropriate code.
Management Code	72	Enter appropriate code.
Blank	73-80	Leave blank.

3. VALIDATION

Computer processed output transaction.

APPENDIX B-226

DISPOSAL RELEASE DENIAL/ADJUSTMENT CARD

1. PURPOSE

The Disposal Release Denial/Adjustment Card is used to advise DSC/ICP of quantities denied or adjusted for Disposal Release Orders.

2. PROCEDURE

The following are the fields in the transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter DIC A6J.
Routing Identifier Code (To)	4-6	Enter RIC To of the supply source from which the DRO was received.
Media and Status Code	7	Leave blank.
Stock Number	8-20	Enter stock number of the item denied.
Blank	21-22	Leave blank.
Unit of Issue	23-24	Enter the Catelog UI abbreviation.
Quantity	25-29	Enter quantity denied, i.e., the difference between quantity transferred and the quantity shown in the DRO. Precede significant digits with zero.
Document Number	30-43	Enter document number as shown in the DRO.
Suffix Code	44	Leave blank.
Retention Quantity	45-51	Enter quantity actually retained.
Fund Code	52-53	Perpetuated from DRO.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Distribution Code	54	Perpetuated from DRO.
Blank	55-56	Leave blank.
Denial Date	57-59	Enter date DRO is denied.
Blank	60-61	Leave blank.
Precious Metals Identification Code	62	Enter applicable code (appendix A-127).
ADPE Identification Code	63	Enter applicable Code (appendix A-125).
Disposal Authority Code	64	Enter M, N or R (appendix A-126).
Routing Identifier Code (From)	67-69	Enter RIC from identifying the activity preparing the denial.
Ownership/Purpose Code	70	Enter appropriate code.
Material Condition Code	71	Enter appropriate code.
Management Code	72	Enter Management Code (appendix A-13) reason for denial.
Blank	73-80	Leave blank.

3. VALIDATION

Computer output transaction.

APPENDIX B-227

DRO FOLLOWUP/CANCELLATION/FOLLOWUP ON CANCELLATION CARD

1. PURPOSE

This card is:

a. Received from DSC/ICP requesting reply as to status of DRO.

b. Submitted by DSC/ICP to cancel DROs.

c. Submitted by DSC/ICP as a followup on a cancellation request.

2. PURPOSE

The following are the fields in the transaction:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter: AFJ for DRO followup. ACJ for cancellation. AKJ for followup on cancellation.
Routing Identifier Code (To)	4-6	Enter the RIC of the distribution depot which is to effect transfer.
Media and Status Code	7	Enter M&S Code 0 or leave blank.
Stock Number	8-20	Enter the NSN of the item to be transferred to the PDO.
Type of Pack Code	21	For subsistence items enter applicable code.
Blank	22	Leave blank.
Unit of Issue	23-24	Enter the catalog UI abbreviation.
Quantity	25-29	Enter the quantity to be transferred based on the inventory control record balance, preceding significant digits with zero(s).

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Number	30-43	Enter the document number assigned to the Disposal Directive.
Suffix Code	44	Leave blank.
Property Disposal	45-50	Enter the Activity Address Code of the Property Disposal activity which is to receive the materiel.
Signal Code	51	Enter applicable code, if required; otherwise, leave blank.
Fund Code	52-53	Enter fund code to be credited with proceeds from sale by PDO. If no credit desired, leave blank.
Distribution Code	54	Enter 9.
Retention Quantity	55-61	Quantity to be retained in stock by activity in pos. 4-6. When the quantity to be retained exceeds the Retention Quantity Field the transaction will be processed off-line.
Precious Metals Identification Code	62	Enter applicable code (appendix A-127).
ADPE Identification Code	63	Enter applicable code (appendix A-125).
Disposal Authority Code	64	Enter M, N or R (appendix A-126).
Demilitarization Code	65	Code assigned by the ICP/IMM as required by DoD 4160.21-M-1, Defense Demilitarization Manual.
Reclamation Code	66	Enter Y if reclamation is required prior to release to DRMO. Enter N if reclamation is not required.
Routing Identifier Code	67-69	Enter RI Code of ICP/IMM originating the DRO.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Ownership/Purpose Code	70	Enter appropriate code.
Materiel Condition Code	71	Enter the Condition Code of the materiel to be transferred.
Management Code	72	Enter Management Code if applicable; otherwise, leave blank.
Screening Code	73	Leave blank.
Unit Price	74-80	Enter the unit price for the NSN shown in pos. 8-20.

3. VALIDATION (For DICs ACJ and AKJ only)

Violation rejects will be listed on appendix F-85.

FIELD POSITION	VALIDATION CODE	VALIDATION CODE
25-29	Numeric, not all zeros.	AS
67-69	Alpha/numeric and must be in Table and Control File.	AB

APPENDIX B-255

SEAVAN MRO DOCUMENT NUMBER INQUIRY/UPDATE

1. This transaction is prepared whenever it is necessary to determine the status of a SEAVAN MRO. It is also used to provide mandatory shipment planning data which was missing in MOWASP. This input is made randomly via CRT and an immediate reply per attached display.

2. REFERENCE

a. Appendix E-038 P, Part J

b. Appendix D-204

3. DATA ELEMENTS

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter MG.
SEAVAN Transaction Code	2	A	Enter I for inquiry. Enter U for update.
DOCUMENT-NR*	14	A/N	Enter MRO Document Number.
SFX	1	A/N	Enter Document Number Suffix or leave blank.
PRTL	2	N	Enter Document Number Partial as required or leave zero.

*Mandatory entry.

4. VALIDATION FOR INITIAL ENTRY

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be MG.
Transaction Code	Must be U or I.
DOCUMENT-NR	Must match recorded Document Number.

5. VALIDATION OF UPDATE ELEMENTS

FIELD LEGEND	VALIDATION
DEST	Must be alpha/numeric filled.
SRC	Alpha/numeric or blank.
PREC	1, 2, 3, 4 or 0.
TC	Alpha or blank.
COMP	Alpha or blank.
WTR-COM	Alpha/numeric filled, 4th position must be alpha.
BK	Alpha/numeric or blank.
STOP	Numeric or zero.
MRO WEIGHT	Numeric greater than zero.
MRO CUBE	Numeric greater than zero.
CS/UNIT PK	Numeric greater than zero.
LGC	Alpha/numeric filled, no blanks.
TIC	B, L, T or blank.

APPENDIX B-256

SEAVAN WORKLOAD REQUEST FOR ADDITIONAL MRO(S) FOR IN-PROCESS LOAD

1. This transaction is used to request additional MROS to complete a SEAVAN Load which is in-process. This transaction is input via the CRT and processedimmediately.

2. REFERENCES

a. Appendix D-192

b. Appendix E-038 P, Part F

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter PR.
SEAVAN Transaction Code*	2	A	Enter DS.
LOAD-NBR*	4	N	Enter load number to be assigned to MROs.
WGT*	5	N	Enter the amount if weight required to complete filling the SEAVAN.
CUBE*	4	N	Enter the amount of cube required to complete filling the SEAVAN.
DEST*	6	A/N	Enter the Destination AAC for which additional materiel is required if materiel is for a stop van; otherwise, leave blank.
PREC	1	N	Enter the desired precedence group or leave blank.
EXC-IND	1	N	Enter Exception Indicator 1 if weight is less than 3,000 or greater than 15,000, or cube less than 50 or greater than 500. Enter 2 if MROs are to be reprinted.

NOTE: To reprint MROs, enter only load number and exception indicator.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be PR only.
SEAVAN Transaction Code	MUST be DS only.
LOAD-NBR	Must be numeric 0001-9999.
WGT	Must be numeric greater than zero. If greater than 15,000 or less than 3,000 output reject output reject for verification if Exception Indicator is not 1.
CUBE	Must be numeric greater than zero. If greater than 500 or less than 50 output reject verification if Exception Indicator is not 1.
DEST	Must be blank unless load is stop van; then, must be alpha/numeric, no imbedded blanks.
PREC	May be 1, 2, 3, 4 or blank.
EXC-IND	May be numeric 1, 2 or zero.

APPENDIX B-257

SEAVAN WORKLOAD REQUEST BY DESTINATION

1. This transaction is input randomly via CRT to request workload release. This input is a result of reviewing the SEAVAN Load Plan Report (F-210) and determining the number of loads to release for shipment. Transactions are maintained on file until the next scheduled processing of the SEAVAN Workload Release Program.

2. REFERENCES

a. Appendix D-192

b. Appendix E-038 P, Part E

c. Appendix F-210

3. The following data elements are entered via CRT to request workload:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter WR.
DEST*	6	A/N	Enter the destination for the SEAVAN Load Pl . Report. When requesting by booking group, enter 99, booking group, two blanks. Example: 99CW##.
STOP-OFF'S**	6	N	Enter up to three stop numbers or leave zero.
FORCE PLAN DATA:			
Precedence	3	N	Enter the precedences that are desired to be planned together. Up to 4 precedences may be combined.
Type Cargo Code	4	A/N	Enter the hazardous Type Cargoes that can be shipped together. Up to 4 Type Cargo Codes may be entered.
COMPAT-REQ	1	A	Enter the specific compatibility Code A or B when requesting a VAN when the possibility of new MROs being received could cause the release of different compatibility with a high load accumulation key. For normal releases leave this field blank.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
RESTRICT-PREC	1	N	Enter the highest precedence code to be planned with lower precedence code. Example: If precedence 2 is entered, precedence 1 and 2 will be planned together and precedence 3 and 4 will be planned together. If the field is left-zero all precedence will be planned together when the load permits.
MDD*	5	N	Enter the Mandatory Departure Date the SEAVAN must leave the depot in order to meet the sailing date.
REL-DATE	5	N	Enter the date the SEAVAN(s) is to be released or leave zero. If left-zero, the SEAVAN(s) will be released in the next workload release cycle.
RDD	3	N	Enter the RDD from the F-210 that is to be released. Mandatory entry for RDD depots.
NBR-VANS*	2	N	Enter the number of SEAVAN(s) to be released for the destination.
VAN-SZ	2	N	Enter the size of SEAVAN if a specific size SEAVAN load is desired or leave zero. If left-zero, optimum SEAVAN load sizes (20, 35, or 40) will be released depending on MRO characteristics. If more than one size is required for a destination, make multiple workload release entries. If weight and cube are entered, VAN size must also be entered.
TYP	1	A	Enter VAN Type R if refrigerated VAN is required. Only enter if SEAVAN size is specified.
VAN-WGT	5	N	Enter the weight to be planned for the SEAVAN or leave zero. If left-zero, the SEAVAN capacities will be obtained from Table and Control File.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
VAN-CBE	4	N	Enter the cube to be planned for the SEAVAN or leave zero. If left-zero, the SEAVAN capacities will be obtained from Table and Control File.
PLI	1	A	Enter Partial Load Indicator Y if partial SEAVAN loads will be accepted to satisfy the number of SEAVANs requested above. Partial loads will only be released if full loads are not available.
SUPPR-FLAG	1	A	Enter an A if FSC 8975 is not to be considered for this VAN. Enter B to suppress Hazardous Cargo (fourth position Water Commodity other than H, Q or Z) from the load plan. Enter C if both FSC 8975 and Hazardous Cargo are to be suppressed. Leave blank if no commodities are to be suppressed.

*Mandatory entries.

**Optional entries when requesting workload by Booking Group. If entered, only the stop numbers indicated will be considered for SEAVAN Planning and release of the Booking Group.

4. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be WR.
DEST	Must be alphanumeric filled or 99 plus two alphanumeric followed by two blanks.
STOP-OFF	Must be numeric and not exceed three stops.
COMPAT-REQ	Must be A, B or blank.
MDD	First two positions must match current year or current year plus one is allowable if last three positions of current date are greater than 340. Last three positions must be 001 through 366.

FIELD LEGEND	VALIDATION
REL-DATE	Same edit as MDD.
RDD	If entered must be 001 through 366.
NBR-VANS	Must be numeric not 0.
VAN-SZ	Must be greater than zero if weight and cube is entered. Must match SEAVAN Capacity Table if not zero and weight and cube is not entered.
TYP	R or blank. Must match SEAVAN Capacity Table unless weight and cube entered in this input.
VAN-WGT	Must be numeric.
VAN-CBE	Must be numeric.
PLI	Must be blank or Y.
SUPR-FLAG	Must be blank or A, B, or C.

APPENDIX B-258

SEAVAN WORKLOAD REQUEST BY DOCUMENT NUMBER/SUFFIX

1. This transaction is used to selectively locate and release for shipment an individual MRO. When the transaction causes release of an MRO, the MRO is assigned 0000, as the SEAVANs load number. It may be added to a SEAVAN load or shipped via another mode of transportation. This input is accomplished via CRT, and the MRO is updated and kept on file until the next scheduled processing of the SEAVAN Workload Release Program.

2. REFERENCES

a. Appendix D-192

b. Appendix E-038 P, Part E

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter WR.
DOCUMENT-NR*	14	A/N	Enter MRO document number.
SFX	1	A/N	Enter document number suffix if applicable.
PRTL	2	N	Enter Document Number Partial as required or leave zero.

*Mandatory entry.

4. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be WR.
DOCUMENT-NR	Must be undocumented MRO.
SFX	Must be alpha/numeric or blank. No special characters.

APPENDIX B-259

SEAVAN ENTRY OF DATE OFFERED

1. This procedure describes the actions required for entry of a date offered to transportation by Shipment Unit (SU). This input results in output of DD Form 1387-1, Military Shipment Label.

2. PROCESS

The following data elements are entered into a CRT to update the file record.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter AD.
SEAVAN Transaction Code*	2	A	Enter DF.
SU-NUMBER*	7,11,13	N	Enter SU number.
CD*	1	N	Enter SU check digit.
SU-WGT*	6	N	Enter weight of SU.
SU-CUBE*	5	N	Enter SU cube.
SU-PCS*	4	N	Enter number of pieces in SU.
TYP-PK*	2	A	Enter MILSTAMP Type Pack Code.
HLD	1	A	Enter hold code per appendix A-21.
NR-LABEL	4	N	Enter number of labels only when fewer labels than one per piece is desired.
OVERRIDE IND	1	A	Enter a Y if SU is to be reoffered. If SU has not been offered leave blank.

*Mandatory entries.

best copy available

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be AD only.
SEAVAN Transaction Code	Must be DF.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
SU-WGT	Must be numeric.
SU-CUBE	Must be numeric.
SU-PCS	Must be numeric.
TYP-PK	Must be alpha.
HLD	Must be alpha per appendix A-21 or blank.
NR-LABEL	Must be numeric greater than zero if fewer labels than one per piece is desired. Cannot exceed number of pieces.
OVERRIDE IND	Must be blank or Y.

APPENDIX B-260

SEAVAN MRO CANCELLATION

1. This procedure describes the actions required for entry of a complete or partial MRO cancellation. With the exception of FMS, entries are restricted to those MROs for which an AC6 cancellation request has been received from the DSC.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter AD.
SEAVAN Transaction Code*		2	Enter DC.
SU/LI-NUMBER*	11,13	N	Enter shipment unit and line item number.
CD*	1	N	Enter SU check digit.
SHIP-QTY*	5	N	Enter actual MRO quantity to be shipped.
ADJUST-QTY*	5	N	Enter MRO quantity canceled. Enter all zeros if cancellation will not be made.
HLD	1	A	Enter Transportation Hold Code, appendix A-21.

*Mandatory entries.

3. VALIDATION

FIELD POSITION	VALIDATION
SEAVAN Section Code	Must be AD only.
SEAVAN Transaction Code	Must be DC only.
SU/LI NUMBER	Must be numeric.
CD	Must be numeric.

FIELD POSITION	VALIDATION
SHIP-QTY	Must be numeric.
ADJUST-QTY	Must be numeric.
HLD	Must be alpha per appendix A-21 or blank.

APPENDIX B-261

SEAVAN DENIAL/MEDICAL CONTROLLED SUBSTANCE - FMS

1. This procedure describes the actions required for entry of a denial for a Medical controlled substance that requires an Export Permit when the exact quantity is not available in support of a FMS shipment.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter AD.
SEAVAN Transaction Code*		2	Enter DL.
SU/LI NUMBER*	11,13	N	Enter shipment unit and line item number.
CD*	1	N	Enter SU check digit.
SHIP-QTY*	5	N	Enter actual MRO quantity to be shipped.
ADJUST-QTY*	5	N	Enter quantity undershipped.
HLD	1	A	Enter Transaction Hold Code, appendix A-21.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be AD only.
SEAVAN Transaction Code	Must be DL only.
SU/LI NUMBER	Must be numeric.
CD	Must be numeric.
SHIP-QTY	Must be numeric.

FIELD LEGEND	VALIDATION
ADJUST-QTY	Must be numeric.
HLD	Must be alpha per appendix A-21 or blank.

APPENDIX B-262

SEAVAN DENIAL/SPECIFIED MATERIEL NOT AVAILABLE TO SHIP

1. This procedure describes the actions required for entry of data to accomplish a denial (warehouse refusal) when insufficient or no stock, in the requested quantity, is available for shipment. Note that individual action must be entered using specified SEAVAN Transaction Codes which are outlined below.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter AD.
SEAVAN Transaction Code*		2	Enter Transaction Code from list below.**
SU/LI NUMBER*	11,13	N	Enter shipment unit and line item number.
CD*	1	N	Enter SU check digit.
SHIP-QTY*	5	N	Enter actual MRO quantity to be shipped.
ADJUST-QTY*	5	N	Enter quantity undershipped.
HLD	1	A	Enter Transaction Hold Code, appendix A-21.

*Mandatory entries.

**SEAVAN Transaction Code Functions

DE - Undershipment, denial. Materiel not available in the type pack specified by the MRO for Subsistence only.

DC - Undershipment, denial. Materiel location found to be misidentified. Assets are not available to satisfy MRO with requested NSN.

DJ - Undershipment, denial. Materiel is not available which has the required shelf-life as specified by the MRO.

DK - Undershipment, denial. Materiel in location found to be in a condition other than the condition requested by the MRO.

DM - Undershipment, denial. Materiel is not available in one continuous length as specified by Advice Code 2N in the MRO.

DT - Undershipment, denial. Insufficient or no materiel is available in the quantity or condition as specified by the MRO.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be AD only.
SEAVAN Transaction Code	Must be DE, DG, DJ, DK, DM or DT only.
SU/LI NUMBER	Must be numeric.
CD	Must be numeric.
SHIP-QTY	Must be numeric.
ADJUST-QTY	Must be numeric.
HLD	Must be alpha per appendix A-21 or blank.

APPENDIX B-263

SEAVAN CANCELLATION OF MRO - LESS THAN SPECIFIED DOLLAR VALUE

1. This option provides the capability to flag an MRO, that has a value less than $200, to prevent notification to the DSC that cancellation action will not be effected. Following this function the MRO will be appended with a cancellation pending quantity upon receipt of the AC6. Processes outlined in appendix B-260, SEAVAN Transaction Code DC, should then be followed.

2. PROCESS

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter AD.
SEAVAN Transaction Code*		2	Enter DX.
DOCUMENT NR*	14	A/N	Enter MRO document number.
SFX*	1	A/N	Enter MRO document number suffix.
PRTL	2	N	Enter document number partial as required or leave zero.
HLD	1	A	Enter Transaction Hold Code, appendix A-21.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be AD only.
SEAVAN Transaction Code	Must be DX only.
DOCUMENT NR	Must be alpha/numeric filled.
SFX	Must be alpha/numeric or blank.
PRTL	Must be numeric.
HLD	Must be alpha per appendix A-21 or blank.

APPENDIX B-264

SEAVAN OVERSHIPMENT DUE TO ITEM PACKAGING

1. This procedure outlines the actions that are required to report the overshipment of an MRO due to item packaging characteristics.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter AD.
SEAVAN Transaction Code*	2	A	Enter DB.
SU/LI-NUMBER*	11,13	N	Enter shipment unit and line item number.
CD*	1	N	Enter SU check digit.
SHIP-QTY*	5	N	Enter actual MRO quantity to be shipped.
ADJUST-QTY*	5	N	Enter quantity overshipped.
HLD	1	A	Enter Transaction Hold Code, appendix A-21.
Weight-Transshipment	5	N	Enter weight of overshipment.
Cube-Transshipment	4	N	Enter cube of overshipment.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be AD only.
SEAVAN Transaction Code	Must be DB only.
SU/LI NUMBER	Must be numeric.
CD	Must be numeric.

FIELD LEGEND	VALIDATION
SHIP-QTY	Must be numeric greater than zero.
ADJUST-QTY	Must be numeric greater than zero.
HLD	Must be alpha per appendix A-21 or blank.
Weight-Transshipment	Must be numeric greater than zero if MRO is type 3 (Transshipment).
Cube-Transshipment	Must be numeric greater than zero if MRO is type 3 (Transshipment).

APPENDIX B-265

SEAVAN UNDERSHIPMENT DUE TO ITEM PACKAGING

1. This procedure describes the actions that are necessary to report the undershipment of an MRO due to item packaging characteristics. This action is restricted to DLA managed materiel only.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter AD.
SEAVAN Transaction Code*	2	A	Enter DD.
SU/LI-NUMBER*	11,13	N	Enter shipment unit and line item number.
CD*	1	N	Enter SU check digit.
SHIP-QTY*	5	N	Enter actual MRO quantity to be shipped.
ADJUST-QTY*	5	N	Enter quantity undershipped.
HLD	1	A	Enter Transaction Hold Code, appendix A-21.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be AD only.
SEAVAN Transaction Code	Must be DD only.
SU/LI NUMBER	Must be numeric.
CD	Must be numeric.
SHIP-QTY	Must be numeric greater than zero.

FIELD LEGEND	VALIDATION
ADJUST-QTY	Must be numeric greater than zero.
HLD	Must be alpha per appendix A-21 or blank.

APPENDIX B-266

SEAVAN MRO MANUAL CONTROL OPTION

1. This procedure describes the actions required to remove an MRO from further automated processing. Once effected, all further processing requirements must be accomplished manually as the record will be removed from the in-process file and placed in the history file.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter SP.
SEAVAN Transaction Code*	2	A	Enter DP.
SU-NUMBER*	7,11,13	N	Enter SU number.
CD*	1	N	Enter SU check digit.
MRO-LINE*	4	N	Enter MRO line item number.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be SP only.
SEAVAN Transaction Code	Must be DP only.
SU NUMBER	Must be numeric.
CD	Must be numeric.
MRO-LINE	Must be numeric.

APPENDIX B-267

SEAVAN REJECT - RDD CANNOT BE MET

1. This procedure describes the actions required to reject an MRO because the Required Delivery Date cannot be met.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter SP.
SEAVAN Transaction Code*	2	A	Enter DQ.
SU-NUMBER*	7,11,13	N	Enter SU number.
CD*	1	N	Enter SU check digit.
MRO-LINE*	4	N	Enter MRO line item number.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be SP only.
SEAVAN Transaction Code	Must be DQ only.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
MRO-LINE	Must be numeric.

APPENDIX B-268

SEAVAN FORCE CLOSE PARTIALLY CANCELED MRO

1. This procedure describes the actions necessary to Force Close a MRO which has been partially canceled. The canceled quantity must be processed using SEAVAN Transaction Code DC prior to this action.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter SP.
SEAVAN Transaction Code*	2	A	Enter DU.
SU-NUMBER*	7,11,13	N	Enter SU number.
CD*	1	N	Enter SU check digit.
MRO-LINE*	4	N	Enter MRO line item number.
QTY*	5	N	Enter actual quantity force closed.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be SP only.
SEAVAN Transaction Code	Must be DU only.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
MRO-LINE	Must be numeric.
QTY	Must be numeric.

APPENDIX B-269

SEAVAN FORCE CLOSED MRO

1. This procedure describes the actions required for entry of data to Force Close an MRO. This action removes the MRO from the in-process file and records the action in the history record. No quantity adjustments are permitted.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter SP.
SEAVAN Transaction Code*	2	A	Enter DW.
SU-NUMBER*	7,11,13	N	Enter SU number.
CD*	1	N	Enter SU check digit.
MRO-LINE*	4	N	Enter MRO line item number.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be SP only.
SEAVAN Transaction Code	Must be DW only.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
MRO-LINE	Must be numeric.

APPENDIX B-270

SEAVAN - CHANGE MRO DATA ELEMENT

1. This procedure describes the action required to change data elements that have already been established in the in-process file. These data elements are restricted to pieces, weight, cube, transportation hold code and date offered to transportation. Changes to denial, cancellation, and shipped quantities are restricted to the initial processing day.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter SP.
SEAVAN Transaction Code*	2	A	Enter DA.
SU NUMBER*	7,11,13	N	Enter SU number.
CD*	1	N	Enter SU check digit.
MRO-LINE*	4	N	Enter MRO line item number to adjust denial or cancellation quantity. Leave 0000 to update SU pieces, weight and cube.
QTY*	5	N	Enter actual quantity to be shipped. See note.
QUANTITY CANCELED	5	N	Enter actual quantity canceled. See note.
QUANTITY DENIED	5	N	Enter actual quantity denied. See note.
DENIAL CODE	2	A	Enter SEAVAN Transaction Code DE, DG, DJ, DK, DT, DM or DL if quantity denied entered; otherwise, leave blank.
DATE AVAIL	5	N	Enter revised Date Offered.
HOLD CODE	1	A	Enter revised Hold Code.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
PIECES	4	N	Enter revised number of pieces for SU.
WEIGHT	6	N	Enter revised weight for SU.
CUBE	5	N	Enter revised cube for SU.

*Mandatory entries.

NOTE: The actual quantity to be shipped must be entered when adjusting either denial or cancellation quantity. The total to be shipped, denied or canceled, must not exceed original quantity open.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be SP only.
SEAVAN Transaction Code	Must be DA only.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
MRO-LINE	Must be numeric. Must be zero to adjust SU pieces, weight or cube. Must be greater than zero to adjust MRO canceled or denied quantities.
QTY	Must be numeric.
QUANTITY CANCELED	May be numeric or asterisks.
QUANTITY DENIED	May be numeric or asterisks.
DENIAL CODE	May be DE, DJ, DK, DL, DM, DT or blank.
DATE AVAIL	Must be numeric.
HOLD CODE	May be alpha per appendix A-21 or blank.
PIECES	Must be numeric.
WEIGHT	Must be numeric.
CUBE	Must be numeric.

APPENDIX B-271

SEAVAN INQUIRY BY LOAD/SHIPMENT UNIT/LINE ITEM

1. This procedure describes the actions necessary to inquire file data by Load, Shipment Unit or Line Item. This process is to be used when detailed data pertaining to a shipment is needed to determine further processing requirements.

2. PROCESS

The following data elements are entered into the system with a CRT. This entry will update the MRO record with shipment data.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter MH.
SEAVAN Transaction Code*	1	N	Enter: 1 - Load Inquiry 2 - SU Inquiry 3 - LI Inquiry 4 - Create load record
LOAD-NBR*	4	N	Enter load number.
SU-NUMBER*	7,11,13	N	Enter SU number.
SU/LI-NUMBER*	11,13	N	Enter MRO line item number.
DESTINATION*	6	A/N	Enter destination of load.
TYPE CARGO*	1	A	Enter Type Cargo desired.
COMPATIBILITY CODE*	1	A	Enter Compatibility desired.
VAN SIZE*	2	N	Enter van size desired.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be NH.
SEAVAN Transaction Code	Numeric 1, 2, or 3.
LOAD-NBR	Numeric, 4-positions with Transaction Code 1.
SU-NUMBER	Numeric, 7, 11 or 13-positions with Transaction Code 2.
LI-NUMBER	Numeric, 11 or 13-position SU and LI number with Transaction Code 3.
DESTINATION	Alpha/numeric, 6-positions with Transaction Code 4. Last two positions can be blank if Booking Group Load is being built.
TYPE CARGO	Alpha or space. Space must be entered if blank Type Cargo is desired. Type Cargo Code is entered with Transaction Code 4.
COMPATIBILITY CODE	Alpha, 1-position with Transaction Code 4. Must be A, B or Z.
VAN SIZE	Numeric, 2-positions with Transaction Code 4.

APPENDIX B-272

SEAVAN - CONFIRM MRO(S) SHIPPED OTHER THAN SEAVAN MODE

1. This procedure describes the actions required to confirm MROs shipped outside the SEAVAN process. Once this action occurs, subsequent shipment processing must be completed manually. However, all confirmation actions must be processed against the SEAVAN In-Process File. The shipment must have been removed from an in-process load via B-273 or B-279. The MRO must be in process and assigned to Load 0000.

2. PROCESS

The following data elements are entered into a CRT to update the file record.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter SP.
SEAVAN Transaction Code*	2	A	Enter DH.
SU-NUMBER*	7,11 or 3	N	Enter SU number.
CD*	1	N	Enter SU check digit.
GBL DATE	3	N	Enter Julian date GBL prepared.
HLD CODE	1	A	Enter Hold Code per appendix A-21.
REL IND	1	N	Enter appropriate release indicator. Enter 1 for local authority. Enter 2 for standing route order. Enter 3 for other MTMC release.
TCN	15	A/N	Enter TCN if different from computer assigned TCN.
MODE	1	A	Enter mode of shipment code from appendix A-17.
ID	1	A	Enter appropriate identification code. Enter B for shipment on GBL/CBL. Enter R for registered parcel post. Enter I for insured parcel post.
GBL-PP NUMBER	8	A/N	Enter GBL, CBL or PP register number.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
APP	2	A/N	Enter appropriation code. Leave blank if DLA. If other than DLA, enter from appendix A-93.
TRANS COST	7	N	Enter transportation cost in dollars and cents or rate. When cost is entered, field may not contain all zeros.
POE	3	A/N	Enter Port of Embarkation.
DT-SHIP	5	N	Enter Julian day and year of actual shipment.
CARR	4	A	Enter carrier code.

*Mandatory entries.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be SP only.
SEAVAN Transaction Code	Must be DH only.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
GBL DATE	Must be numeric .
HLD CODE	May be alpha per appendix A-21 or blank.
REL IND	May be numeric 1, 2, 3 or blank.
TCN	Alpha/numeric or blank.
MODE	May be alpha (except Mode V) per appendix A-17 or blank.
ID	May be alpha B, I, R or blank.

FIELD LEGEND	VALIDATION
GBL-PP NUMBER	Alpha/numeric or blank.
APP	Alpha/numeric or blank.
TRANS-COST	Must be numeric.
POE	Alpha/numeric or blank.
DT-SHIP	Must be numeric.
CARR	May be alpha or blank.

APPENDIX B-273

SEAVAN - REMOVE SU FROM CONFIGURED LOAD

1. This procedure describes the actions required to remove an SU from an load and add the SU to a load being assembled for the same destination.

2. PROCESS

The following data elements are entered via CRT to signify the requested action:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter PR.
SEAVAN Transaction Code*	2	A	Enter DY.
LOAD-NBR*	4	N	Enter load number currently assigned to the SU.
SU-NUMBER*	7,11 or 13	N	Enter SU number.
CD*	1	N	Enter SU check digit.
LOCAT	9	A/N	Enter location where materiel is assembled.
RE-LD-NBR	4	N	Enter revised load number or leave zero.

*Mandatory entries.

NOTE: When an SU cannot be loaded in the initially scheduled Van, the SU may be directed back to the MRO Bank for planning into a following load, reference B-279. When revised load number is left zero, load number 0000 will be assigned until further input is accomplished.

3. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be PR only.
SEAVAN Transaction Code	Must be DY only.
LOAD-NBR	Must be numeric.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
LOCAT	Alpha/numeric or blank.
RE-LD-NBR	Must be numeric.

APPENDIX B-274

SEAVAN/TCMD/CONSIST UPDATE/PRINT REQUEST

1. This procedure describes the actions necessary to update erroneous or missing data which are necessary to print the SEAVAN TCMD Listing (F-211) and, if required, the SEAVAN Consist (F-62). This audit must be accomplished prior to requesting SEAVAN/TCMD/Consist Print, SEAVAN Transaction Code DV.

2. Enter the SEAVAN Transaction Code DZ and the appropriate SEAVAN Load Number.

a. The computer will first display any MRO in the load pending cancellation. The operator must take action to indicate the canceled and shipped quantities using SEAVAN Transaction Code DC, appendix B-260.

b. If no cancellations are pending, the program will return a display of information contained in the computer record which is required to prepare SEAVAN TCMD (T_2) and Consist header data. If a single destination load is to be changed to a stop-off van, place a Y in the STOP-OFF-VAN indicator. Place the stop numbers desired in the STOP-NRS field. The stop numbers entered must be entered in sequence. The last stop number entered will be reflected as the ultimate consignee. Once a load has been indicated as a stop-off van, it cannot be changed to a single destination van. Data update is accomplished by entering new data or keying over existing data in updatable fields. When the Enter key is depressed, the program will reject as invalid data any field which is mandatory and nothing was entered.

c. The computer will follow the load display with a display for each shipment unit on the load. This display contains data required to prepare Prime Shipment Unit Data TCMDs, T_4. If the load record indicates the load as a stop-off van, the stop number in the shipment unit record must match the stop number entered in the load record panel. Action will be the same as for the first display.

d. If the shipment unit is DICOMSS or the customer wants a consist per Table and Control File, description will be displayed. The operator must enter the item description.

e. After all load data recorded in the computer have been displayed, an output will be provided which will allow establishment of a non-MILSTRIP TCN. This is to allow recording of non-MILSTRIP data and inclusion on the SEAVAN TCMD/Consist Listings. Entry of data on this display will record the shipment unit in the load and increase piece, weight and cube totals appropriately. This display will continue to return until a completion code is entered. A completion code of C will indicate the audit is complete.

3. The following data will be entered to initiate update/print request:

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter RL.
SEAVAN Transaction Code*	2	A	Enter: DZ - Request update display. DV - Request TCMD/Consist output.
LOAD-NBR*	4	N	Enter desired load number.
CONSIST-RPRNT	1	A	Enter: Y - Reprint Consist only. N - Print Consist and Advance Consist (message).
DT-SHIP	5	N	Enter date of shipment on DV only or blank.
SEAL-NBR	8	N	Enter seal number on DV when required or blank.

* Mandatory entries.

4. The following data elements will be output on a CRT display for review and update as a result of DZ input.

a. For each line item in the load pending cancellation the following display will be provided.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SU/LI NUMBER	7,11 or 13	N	Provided by the program.
CD	1	N	Provided by the program.
CAN-QTY	5	N	Provided by the program.

b. Load data output once per load.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
VAN-NBR	8	N	a. In-process file. b. Numeric filled prefix with zeros if less than 8.
VAN-OWNR	4	A	a. In-process file. b. Alpha left-justified; may be left blank.
SZ	2	N	a. SEAVAN size from in-process record. b. Numeric filled.
WTR-COM	5	A/N	a. From the load record. Otherwise, operator entry in accordance with MILSTAMP, appendix F, figure F-5. b. Filled alpha/numeric.
POE	3	A/N	a. From in-process record. b. First position must be 1, 2, 3 or 4, to produce TCMD records. If POE TCMD's are not desired enter 111 in the field.
POD	3	A/N	a. From in-process record. b. Filled alpha/numeric.
TYP PK	2	A/N	a. The program will output Z in the first position if blank in the load record. The operator must enter 2nd position in accordance with MILSTAMP, appendix B, paragraph B-88. b. Filled alpha/numeric.
SEAVAN TCN	17	A/N	
CONSR	(6)	(A/N)	a. From in-process record. b. Alpha/numeric filled.
VOY-NR	(4)	(A/N)	a. From in-process record. b. Alpha/numeric filled.
S-NR	(4)	(A/N)	a. From in-process record or added by operator. b. Alpha/numeric filled.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
TRM	(2)	(A/N)	a. From in-process record. b. Alpha/numeric filled.
TYP	(1)	(A/N)	a. From in-process record. b. Alpha/numeric filled.
DT-SHP	5	N	a. Operator entry. b. Numeric must be equal to or greater than document release dates or blank.
ETA	1	A/N	a. Operator entry per MILSTAMP. b. Alpha/numeric.
SZ-VAN-ORDR	2	N	a. Operator entry. Enter size of van order if different than size provided. b. Zero or numeric.
SEAL NBR	8	N	a. Operator entry. Enter seal number used to seal the SEAVAN, prefix with zeros if necessary. b. Numeric filled or blank.
CARR	4	A	a. From in-process record. b. Alpha left-justified; may have trailing blanks.
RANGE	5	A/N	a. Operator entry only required on refer vans. Enter IAW MILSTAMP, appendix F, figure F-5. b. Only required if special requirement code in load key is 3, 5, 6 or 9. F in first position, numeric in positions 2 and 3. Numeric or XX in positions 4 and 5.
VESSEL-NAME	10	A/N	a. From in-process record. b. No edit.
STEAM-LINE	10	A/N	a. From in-process record. b. No edit.
SAIL-DT	5	N	a. From in-process record. b. No edit.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
WEIGHT	5	N	a. From in-process record. b. No edit.
CUBE	5	N	a. From in-process record. b. No edit.
PCS	5	N	a. From in-process record. b. No edit.
VAN-CBE	4	N	a. From in-process record. b. No edit.
STOP-OFF VANS	1	A	a. Operator input. b. If van is to change to a stop-off van, enter a Y.
STOP Numbers	10	N	a. From in-process record. b. Must be numeric 01-99.
ADDITIONAL DESCRIPTIVE DATA	208	A/N	a. Operator input. Additional transporation information. b. No edit.

c. Shipment Unit Data output once for each shipment unit on the load.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
SU-NUMBER	7,11	N	a. From in-process record. b. Not updatable.
CD	1	N	a. From in-process record. b. Not updatable.
DT-OFR	5	N	a. From in-process SU record. b. Must be equal to or greater than document release date. No entry required for transshipments.
TAC	4	A/N	a. From in-process SU record. * b. Alpha/numeric filled.
PCS	4	N	a. Actual offered pieces from SU record. b. Must be numeric greater than zero.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
WEIGHT	5	N	a. Actual offered weight from SU record or estimated weight of all MROs in SU. b. Must be numeric greater than zero.
CUBE	4	N	a. Actual offered cube from SU record or estimated cube of all MROs in SU. b. Must be numeric greater than zero.
UN/NR	4	A/N	a. Program will provide from NIIN freight description information if SU type cargo code is A, C, F, G, I, J, K, L, N, O, P, R, S, T, V, W, X or Y.* b. Alpha/numeric filled or blank.
UN-CLS	2	A/N	a. Program will provide from NIIN freight description information based on same criteria as UN number.* b. Alpha/numeric or blank.
DEST	6	A/N	a. From in-process SU. b. Not updatable.
MGR	3	A/N	a. From first MRO in SU. Not available for transshipments. b. Not updatable.
STOP Number	2	N	a. From in-process SU. b. Must have entry which matches stop numbers in lead record.
MISC/HAZARDOUS INFORMATION	234	A/N	a. Program will provide from NIIN freight description information for type cargo codes A, C, F, G, I, J, K, L, N, O, P, R, S, T, V, W, X or Y. The following messages will be provided by the program for the following types cargo codes.* TCC — MESSAGE H — Subject to damage from heat.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE

TCC	MESSAGE
Q	Subject to damage from freezing.
D	Contaminated cargo not including hazardous.
E	Empty hazardous materiel cont. or pkgs. (Empty label.)
M	Magnetic materiel.
U	Combustible liquid (no label).

The program will also provide additional messages for the following special requirements codes/water commodity code.

SRC	MESSAGE
3	Refer 36 to 46 degrees F. May be out of refer for special periods.
5	Refer constant 36 to 46 degrees F water and ice required during shipment.
6	Freeze below 32 degrees F.
9	Temperature control 59 to 86 degrees F degrees F storage only.

WTCC	MESSAGE
70DZ9	Consumer commodity ORM-D. IMCO competent authority certification - USA/001-77 applies.

b. No edit.

*This information for transshipments is provided in TCMD data. It should be displayed from the TCMD.

d. If the shipment until is DICOMSS or table 04 indicates that a Consist is required, the following display will be returned for each MRO which does not have an item description.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
SU/LI	7,11	N	a. Provided by program; not updatable. b. Provided by programs; not updatable.
ITEM DESCRIPTION	50	A/N	a. Operator entry. b. Must not be blank.

NOTE: On the foregoing displays asterisks will be output in data fields when data is not available in in-process record or data is to be operator entry.

e. The following display will be returned after all SUs and lines have been reviewed. This display will allow input of the completion code or adding non-MILSTRIP SUs. This display will be returned after input until the completion code is entered.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
COMPLETION CODE	1	A	a. Enter C if complete. Leave blank if adding non-MILSTRIP SU. b. Must be C or blank.
WTR-COM	5	A/N	a. Enter appropriate water commodity type cargo and special handling code per MILSTAMP. b. Alpha/numeric filled.
TYP-PK	2	A/N	a. Enter type pack per MILSTAMP. b. Alpha/numeric filled.
NON-MILSTRIP TCN	17	A/N	a. Enter non-MILSTRIP TCN. b. Alpha/numeric filled.
DESTINATION	6	A/N	a. Enter destination AAC. b. Alpha/numeric filled.
STOP	2	A/N	a. Enter stop off number if SEAVAN has more than one destination. b. Must contain 01 or 99 if multiple destinations on SEAVAN; otherwise, leave zero. Must match stop number in load record.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	a. SOURCE OF DATA b. VALIDATION OF INPUT/CHANGE
TAC	4	A/N	a. Enter appropriate transportation account code per MILSTAMP. b. Alpha/numeric filled.
PCS	4	N	a. Enter the number of pieces in SU. b. Numeric greater than zero.
WEIGHT	5	N	a. Enter weight of SU. b. Numeric greater than zero.
CUBE	4	N	a. Enter cube of SU. b. Numeric greater than zero.
HAZARDOUS S/N	13	A/N	a. Enter Hazardous Stock Number if required. b. No edit.
UN-NR	4	A/N	a. Enter UN number for Hazardous shipments. b. No edit.
UN-CLS	2	A/N	a. Enter UN class for Hazardous shipments. b. No edit.
DICOMSS IND	1	A	a. Enter D if DICOMSS; otherwise, blank. b. D or blank.
DICOMSS DESCRIPTION/ MISCELLANEOUS	234	A/N	a. Enter item description of DICOMSS Shipment or enter miscellaneous information. b. No edit.

APPENDIX B-275

SEAVAN MTMC RELEASE UPDATE, DELETE AND INQUIRY

1. These transactions are processed via CRT whenever an add, change, delete or inquiry is to be made to the MTMC Release File. Whenever the number of large or small vans required is zero, the record will be automatically deleted. Five sets of data may be entered for each destination. VAN serial number will be incremented by 1 for each release of a large or small VAN when serial number entered is greater than zero.

2. REFERENCES

a. Appendix D-194

b. Appendix E-038 P, Part B

3. Process violations will appear as error messages on the terminal.

4. DATA ELEMENTS

a. Enter the following:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter MR.
DEST*	6	A/N	Enter appropriate consignee or POD left-justified.

*Mandatory entries.

b. The following data elements will be displayed.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Data	11		
VOY-NR*	(4)	N	Enter voyage number.
S-NR	(4)	A/N	Enter WTCA serial number or leave 0000 if a POD is entered in the Destination field.
TRM	(2)	A/N	Enter terms.
TYP*	(1)	A/N	Enter type. Alpha X, numeric 2 through 9 only.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
LG*	2	N	Enter number of large vans required (larger than 32 ft.).
SM*	2	N	Enter number of small vans required (smaller than 32 ft.).
VESSEL-NAME	10	A	Enter vessel name.
STEAM-LINE	10	A	Enter name of steamship line carrier.
OWNR	4	A	Enter owner abbreviation of SEAVANS to be used on release. Left-justify.
SAIL-DT*	5	N	Enter sailing date.
ETA	5	N	Enter Estimated Time of Arrival.
CARR	4	A	Enter ocean carrier.
POE*	3	A/N	Section IV, Appendix B, Volume I, MILSTAMP.
POD*	3	A/N	Section IV, Appendix B, Volume I, MILSTAMP.

*Mandatory entries.

5. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be MR.
DEST	Must be alpha/numeric filled or three alphanumerics followed by three blanks.
VOY-NR	Must be numeric.
S-NR	Must be alpha/numeric.
TYP	Must be alpha or numeric 2 through 9.
LG	Must be numeric.
SM	Must be numeric.

FIELD LEGEND	VALIDATION
SAIL-DT	Must be numeric.
POE	Must be alpha/numeric.
POD	Must be alpha/numeric.

APPENDIX B-276

SEAVAN EQUIPMENT POOL UPDATE AND INQUIRY

1. These transactions are processed via CRT whenever an add, change, delete or inquiry is to be made to the SEAVAN Equipment Pool File.

2. REFERENCES

   a. Appendix D-195

   b. Appendix E-038 P, Part D

3. Process violations will appear as error messages on the terminal.

4. DATA ELEMENTS

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter EP.
SEAVAN Transaction Code*	2	A	Enter: VD - Add/Change. VE - Delete. VF - Inquiry.
VAN-NBR*	8	N	Enter SEAVAN number.
OWNR*	4	A	Enter van owner.
SZ	2	N	Enter size.
TYP*	1	A/N	Enter type (SEAVAN TCN, position 17).
CUBE	4	N	Enter cube capacity of van.
LOCAT*	5	A/N	Enter location.
CARR	4	A	Enter name of carrier.

* Mandatory entries.

5. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be EP only.
SEAVAN Transaction Code	Must be VD, VE or VF only.
VAN-NBR	Must be numeric.
OWNR	Must be alpha, left-justified, may have trailing blanks.
SZ	Must be numeric.
TYP	Alpha X, numeric 2 through 9 only.
CUBE	Must be numeric.
LOCAT	Must be alpha/numeric.
CARR	May be alpha or blank.

APPENDIX B-277

SEAVAN TABLE AND CONTROL UPDATE

1. These transactions are processed via CRT to establish and maintain, as necessary, computer controlled SEAVAN Tables.

2. REFERENCES

a. Appendix B-282

b. Appendix D-196

c. Appendix E-038 P, Part L

3. Process violations will appear as error messages on the terminal.

4. Data entries are outlined as follows and are sequenced by table number.

a. Table 01, SEAVAN Capacity Table

(1) This table provides information concerning size, capacity and type of van (refrigerated - other).

(2) Table limit - 25

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter TC.
Update Code*	2	N	Enter 01.
SEAVAN Transaction Code*	2	A	Enter: VK - Add. VL - Delete.
VAN SZ*	2	N	Enter van size.
REFRIG-CD	1	A	Enter R if refrigerated; otherwise, leave blank.
NET-WT-CAP*	5	N	Enter net weight capacity of van.
NET-CU-CAP*	4	N	Enter net cube capacity of van.

*Mandatory entries.

(3) Validation

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be TC.
Update Code	Must be 01.
SEAVAN Transaction Code	Must be VK or VL.
REFRIG-CD	Must be R or blank.
VAN-SZ	Must be numeric greater than zero.
NET-WT-CAP	Must be numeric greater than zero.
NET-CU-CAP	Must be numeric greater than zero.

b. Table 02, Part 1, Hazardous Type Cargo Codes and Storage Compatibility Codes Table.

This table contains logic for three functions.

(1) Identifies Hazardous Type Cargo Codes which may be shipped in the same vans. Table limit - 26.

(2) Identifies Hazardous Type Cargo Codes that an additional DD Form 1348-1 will be generated with all available modes of freight description information. Table limit - 23.

(3) Identifies Hazardous Storage/Compatibility Codes that an additional DD Form 1348-1 will be generated with all available modes of freight description information. Table limit - 38.

FIELD LEGEND	VALIDATION
SEAVAN Section Code*	Must be TC.
Update Code*	Must be 02.
SEAVAN Transaction Code*	Must be VK or VL.
TYPE CARGO CODE	Must be alpha excluding Z.

c. Table 03, Constants and Controls.

(1) This table contains constants necessary in the SEAVAN system.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter TC.
Update Code*	2	N	Enter 03.
CONSGR*	6	A/N	Enter DoDAAC assigned to shipping activity.
Depot-ID	1	A	Enter Depot-ID Code.
ZIP*	5	N	Enter ZIP Code assigned to shipping activity.
NEXT SU	7	N	Computer controlled.
NEXT-BATCH	3	N	Maintained automatically by computer program.
NEXT-LOAD	4	N	Computer controlled.
Location Groups Which May Be Batched	3		
BT-WHS-1*	(1)	A/N	Enter first Warehouse Group to be batched.
BT-WHS-2*	(1)	A/N	Enter second Warehouse Group to be batched.
BT-WHS-3*	(1)	A/N	Enter third Warehouse Group to be batched.
WT-PCT*	2	N	Enter the acceptable percentage of weight utilization for SEAVAN Planning. The SEAVAN Planning program will plan SEAVANS to this percentage of utilization.
CU-PCT*	2	N	Enter the acceptable percentage of cube utilization for SEAVAN Planning.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Weight Utilization Percentage when Cube Fully Utilized (PCT-EXCEED)	2	N	Enter the minimum acceptable weight utilization if the cube is fully utilized. SEAVAN Planning will not attempt to plan for a larger SEAVAN if this parameter is met.
1348-1	1	A	Enter Y if clear text consignor. Must be computer printed on the DD Form 1348-1.
PROC*	1	N	Enter the average number of days, after document release, it takes to pick, pack and hold shipments prior to shipping.
NO-LOC*	1	N	Enter the number of days No Location MROs should be suspended before automatic denial.
TRANS-PROC	2	N	Enter the number of days allowed for processing transshipments. Date received to date shipped.
DEPOT-ANALYSIS	1	N	Enter the number of days desired for analysis of MROs in Precedence 1.
DEPOT-COMM-RI	7	A/N	Enter the Communications Routing Identifier assigned to the depot.
SU-ASSY-AREA*	3	A/N	Enter the General Assembly Area (3-position Warehouse Area Code) to be used for all Freight Shipment Units not exceeding the Shipment Unit Weight and Cube limits below.
SU-ASSY-WT-LIMIT*	5	N	Enter the number of pounds above which Freight Shipment Units are assigned an assembly area other than the general assembly area. Enter leading zeros.
SU-ASSY-CU-LIMIT*	4	N	Enter the number of cubic feet above which Freight Shipment Units are assigned an assembly area other than the General Assembly Area. Enter leading zeros.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
TU-ASSY-AREA*	3	A/N	Enter the General Assembly area to be assigned to Transportation Units not exceeding the Transportation Unit Weight and Cube units below.
DICOMSS Cycle Code	10	A/N	Enter DICOMSS Cycle Code(s) which are under inventory.
Commodity Manager Code	5	A/N	Enter Commodity Manager Code that is under inventory.
MRO-Quantity Override	1	N	a. Enter 1 through 9, or leave blank if option is not desired. b. Numeric or blank. c. MRO Quantity Invalid.
TU-ASSY-WT-LIMIT*	5	N	Enter the number of pounds above which Freight Shipment Units are assigned an assembly area other than the General Load Assembly Load Assembly Area. Enter leading zeros.
TU-ASSY-CU-LIMIT*	4	N	Enter the number of cubic feet above which freight shipment units are assigned an assembly area other than the general load assembly area. Enter leading zeros.
FSC Excluded Workload Pull	20	N	Enter up to five Federal Supply Classifications that will be excluded from the additional workload request.
LG Van Weight-Out	5	N	Enter the parameters for 35 and 40 foot weight-outs.
SM Van Weight-Out	5	N	Enter the parameters for 20 and 24 foot weight-outs.
Consignor Clear Text Address*	48	A/N	Enter clear text address of shipping of shipping depot. Twenty-four positions per line.

(2) Validation

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be TC.
Update Code	Must be 03.
CONSGR	Must be alphanumeric.
Depot-ID	Must be alpha
ZIP	Must be numeric.
Location Groups Which May Be Batched	Alphanumeric.
WT-PCT	Must be numeric greater than zero.
CU-PCT	Must be numeric greater than zero.
PCT-EXCEED	Must be numeric greater than zero.
1348-1	Alpha Y or blank.
PROC	Numeric greater than zero.
NO-LOC	Numeric 0 through 9.
TRANS-PROC	Numeric 01-99.
DEPOT-ANALYSIS	Numeric 1-9.
DEPOT-COMM-RI	Alphanumeric filled.
SU-ASSY-AREA	Alphanumeric, no blanks.
SU-ASSY-WT-LIMIT	All numeric, other than all zeros.
SU-ASSY-CU-LIMIT	All numeric, other than all zeros.
DICOMSS Cycle Code	Alphanumeric.
Commodity Manager Code	Alphanumeric.
TU-ASSY-AREA	Alphanumeric, no blanks.
TU-ASSY-WT-LIMIT	All numeric, other than all zeros.
TU-ASSY-CU-LIMIT	All numeric, other than all zeros.

FIELD LEGEND	VALIDATION
FSC Excluded Workload Pull	All numeric if entered.
LG Van Weight-Out	Numeric.
SM Van Weight-Out	Numeric.

d. Table 04, Destinations requiring SEAVAN Consist (F-62), and/or advance SEAVAN Consist message format (F-162).

(1) This table indicates destinations which desire printed and/or transceived SEAVAN Consists (all DICOMSS destinations receive a printed SEAVAN Consist).

(2) Table limit - 150

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Section Code	2	A	Enter TC.
Update Code	2	N	Enter 04.
Action Code	2	A	VK - Add/change. VL - Delete.
DEST	6	A/N	Enter the destination which desired a Consist.
PRT	1	N	Enter: 1 - Print only. 2 - Message Format only. 3 - Print and Message Format. Blank - Suppress Print and Message format.
TCMD	1	A	Enter N if TCMDs should not be transceived.
FROM	64	A/N	7-position Originator Communications Routing Identifier Code, plus 58-position in-the-clear address data. Source: Allied Communications Publication (ACP) 117, CAN-US Supplement 1, Sections 1 and 2.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
TO	66	A/N	7-position Destination Communications Routing Identifier Code, plus 60-position in-the-clear address data. Source: ACP 117, CAN-US Supplement 1, Sections 1 and 2.
INFO-1	61	A/N	7-position Information Destination Communications Routing Identifier Code, plus 56-position in-the-clear address data. Source: ACP 117, CAN-US Supplement 1, Sections 1 and 2.
INFO-2	61	A/N	Same as INFO-1.
INFO-3	61	A/N	Same as INFO-1.
INFO-4	61	A/N	Same as INFO-1.

(3) Validation

FIELD LEGEND	VALIDATION
Update Code	Must be 04.
SEAVAN Transaction	Must be VK or VL.
Destination	Alphanumeric filled.
PRT	Must be 1, 2, 3 or blank. If blank, TCMD Suppression Code must be N.
ROUT-ID (Destination Communications Routing Identifier)	Alphanumeric filled or blank. Must be filled if Print/Transceive Indicator is 2 or 3.
TCMD	Must be N or blank. If Print/Transceive Indicator is blank, this must be N.

e. Table 05, Project Codes that need Special Handling.

(1) This table will be established when special project codes, i.e., Holiday items or any other projects, require special handling. The precedence code that is entered with the project code in table 05 will be assigned to the MRO that matches project code in table 05.

(2) Table Limit - 25

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code	2	A	Enter TC.
Update Code	2	N	Enter 05.
SEAVAN Transaction Code	2	A	VK - Add/change. VL - Delete.
Project Code	3	A/N	Enter the project code that requires special handling.
Precedence Code	1	N	Enter the precedence code that MRO is to be assigned.

(3) Validation

FIELD LEGEND	VALIDATION
Update Code	Must be 05.
SEAVAN Transaction Code	Must be VK or VL.
Project Code	Alphanumeric filled.
Precedence Code	Must be 1, 2, 3, 4 or blank.

f. Table 06, Destination - Country Cross-Reference.

(1) This table will provide a Cross-Reference by Destination to country. This cross-reference will enable the SEAVAN Process to provide on-line Performance Summary totals by Destination Country.

(2) Table Limit - 125

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code	2	A	Enter TC.
Update Code	2	N	Enter 06.
SEAVAN Transaction Code	2	A	VK - Add/Change.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Destination	6	A/N	Enter SEAVAN Consignee.
Country	2	A	Enter the Country Code (appendix A-19) associated with the destination.

(3) Validation

FIELD LEGEND	VALIDATION
Update Code	Must be 06.
SEAVAN Transaction Code	Must be VK.
Destination	Alphanumeric filled.
Country	Alpha filled.

APPENDIX B-278

SEAVAN MTMC SHIPPING DATA FOR IN-PROCESS LOADS

1. This transaction is used to add/change/delete MTMC release data and SEAVAN Equipment Pool Data as a result of data not being available at the time the SEAVAN load was released. The SEAVAN Equipment/MTMC Release Missing Data Report, F-213, notifies transportation personnel of the requirement to provide this data.

2. REFERENCES

a. Appendix D-197

b. Appendix E-038 P, Part C

c. Appendix F-213

3. Entry of the following data elements will result in the attached CRT display. Add/change displayed elements and reenter. This will result in update of the In-Process SEAVAN Load Record.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter IP.
LOAD NUMBER*	4	N	Enter load number.

4. VALIDATION

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be IP.
LOAD NUMBER	Must match an In-Process Load Number.

5. CRT DISPLAY DATA ELEMENTS

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Data:	11		
VOY-NR*	(4)	A/N	Enter Voyage Number.
S-NR	(4)	A/N	Enter WTCA serial number.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
TRM	(2)	A/N	Enter terms.
TYP	(1)	A/N	Enter type.
VESSEL-NAME	10	A	Enter Vessel name.
STEAM-LINE	10	A	Enter name of Steamship Line carrier.
OWNR	4	A	Enter owner abbreviation of SEAVANs to be used on release. Left-justify.
SAIL-DT *	5	N	Enter sailing date.
ETA *	5	N	Enter Estimated Time of Arrival.
CARR	4	A	Enter Ocean Carrier.
POE	3	A/N	Section IV, Appendix B, Volume I, MILSTAMP.
POD	3	A/N	Section IV, Appendix B, Volume I, MILSTAMP.

*Mandatory entries.

6. VALIDATION

FIELD LEGEND	VALIDATION
VOY-NR	Must be alpha/numeric.
OWNR	Must be alpha, left-justified; may have trailing blanks.
SAIL-DT	Must be numeric.
ETA	Must be numeric.

APPENDIX B-279

SEAVAN - REMOVE LINE ITEM FROM CONFIGURED SHIPMENT UNIT/LOAD

1. This procedure describes the actions required to:

a. Remove a line item from a configured Shipment Unit (SU). This input will single line the line item and change the assigned load number to 0000. Action must then be taken to confirm the shipment if shipped by other than SEAVAN or assign a new SEAVAN Load Number or return the shipment to the SEAVAN Shipment Planning function.

b. Partial a line item.

c. Return a SU item or partial to the SEAVAN Workload Bank.

2. PROCESS

a. The program reference code is entered into the remote entry device to call the processing program for display.

b. To remove a line item from a configured SU/Load enter:

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter PR.
SEAVAN Transaction Code*	2	A	Enter VU.
SU-NUMBER*	7	N	Enter SU number.
CD*	2	N	Enter SU check digit.
LINES*	4	N	Enter line item numbers up to approximately 25 per input. Enter commas after each line number.

*Mandatory entries.

c. Validation

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be PR only.
SEAVAN Transaction Code	Must be VU only.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
LINES	Must be numeric.

d. To partial a line item enter:

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter PR.
SEAVAN Transaction Code*	2	A	Enter VV.
SU/LI NUMBER*	11,13	N	Enter SU/LI number.
CD*	2	N	Enter SU check digit.
QTY*	5	N	Enter quantity to be partialed.
Weight Transshipment	5	N	Enter the weight for transshipments which coincides with quantity.
Cube Transshipment	4	N	Enter the cube for transshipments which coincides with quantity.

*Mandatory entries.

e. Validation

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be PR only.
SEAVAN Transaction Code	Must be VV only.
SU-LI NUMBER	Must be numeric.
CD	Must be numeric.
QTY	Must be numeric.
Weight Transshipments	Must be greater than zero for Type 3 MRO (Transshipment).
Cube Transshipments	Must be greater than zero for Type 3 MRO (Transshipment).

NOTE 1: The line item must have been previously single lined from the shipment unit and be assigned to Load 0000 to accomplish partialing.

NOTE 2: The program will determine and assign the appropriate partial number and print out partials assigned with respective quantities.

f. To return a shipment unit to the SEAVAN Workload Bank enter:

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
SEAVAN Section Code*	2	A	Enter PR.
SEAVAN Transaction Code*	2	A	Enter VW.
SU-NUMBER*	7, 11 or 13	N	Enter SU number.
CD*	2	N	Enter SU check digit.
LOCAT	9	A/N	Enter location were SU is staged.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
DEST	6	A/N	Enter destination.
SRC	1	A/N	Enter SRC.
TC	1	A	Enter type cargo code.
COMP	1	A	Enter Compatibility Code.
WTR-COM	5	A/N	Enter water commodity.
BK	2	A/N	Enter booking group.
STOP	2	N	Enter stop number.
WGT	5	N	Enter actual weight of shipment to be replanned.
CU	4	N	Enter actual cube of shipment to be replanned.

*Mandatory entries. Other elements should only be entered if change in existing data is desired.

g. Validation

FIELD LEGEND	VALIDATION
SEAVAN Section Code	Must be PR only.
SEAVAN Transaction Code	Must be VW only.
SU-NUMBER	Must be numeric.
CD	Must be numeric.
LOCAT	Alpha/numeric or blank.
DEST	Alpha/numeric filled or blank.
SRC	Alpha/numeric or blank.

FIELD LEGEND	VALIDATION
TC	May be alpha or blank.
COMP	Alpha or blank.
WTR-COM	Alpha/numeric or blank.
BK	Alpha/numeric or blank.
STOP	Must be numeric.
WGT	Must be numeric or zero (see note).
CU	Must be numeric or zero (see note).

NOTE: If in-process shipment unit weight is zero, then weight and cube entered must be greater than zero.

APPENDIX B-280

SEAVAN MIS

1. The SEAVAN Management Information System is on-line system, updated as actions occur throughout the SEAVAN process and is inquirable through remote entry devices. Data is subdivided into two major categories - Production and Performance - which enables production managers to monitor daily operations, forecast future requirements and measure past performance. Inquiries are available by groups of data elements. Historical monthend reports, where applicable, will be printed on the F-167 report.

2. PROCESS

a. The program reference code is entered into the remote entry device to call the processing program to display. Subsequent entries into the display will produce MIS data according to the option entered.

b. Production Data

(1) MROs received into SEAVAN (see figure 1 for sample display).

(a) For both DICOMSS and non-DICOMSS by each DSC manager provide:

1. MROs received by IPG.

2. Daily, month to date, and previous months totals for all IPGs.

(b) Totals for all managers.

1. Daily totals by IPG.

2. Daily, month to date and previous months totals for all IPGs.

(2) MROs on-hand (see figure 2 for sample display).

(a) For unreleased MROs provide:

1. DICOMSS and non-DICOMSS by precedence group.

2. Totals for each precedence group and totals for all precedence groups.

(b) For in-process MROs provide:

1. DICOMSS and non-DICOMSS by precedence group.

2. Totals for each precedence group.

(3) Load information (see figure 3 for sample display).

For each destination provide a count of loads in-process, unreleased full loads, and unreleased partial loads.

(4) Workload release data (see figure 3 for sample display).

(a) Last three cyclic releases:

1. Date and time

2. MROs

3. Shipment units

4. Loads

(b) Last three days:

1. Date

2. Additional MROs pulled randomly

3. Shipment units

(5) Transshipments on-hand (see figure 5 for sample display). For both unreleased and in-process transshipments provide:

1. Total shipment units

2. Total weight

3. Total cube

4. Average age

5. Oldest

c. Performance Data

(1) Load performance data (see figure 6 for sample display).

(a) Provide the following data for loads shipped. Data will be provided for DICOMSS loads, non-DICOMSS loads, mixed loads, and total of all loads.

1. Loads shipped

2. Loads shipped by mandatory departure date

3. Total weight

4. Total cube

5. Average percent of cube utilization. This percent is computed by dividing the inside van cube that was entered at final load review into the actual cube loaded on the van.

6. Average percent of weight utilization. This percent is computed by dividing the van size capacity into the actual weight load on the van.

7. Loads which exceeded 80 percent cube utilization or 40,000 pounds.

(b) For each of the categories in subparagraph (a) above provide previous day totals, month-to-date totals, and previous month totals.

(2) MRO performance (see figure 7 for sample display).

(a) Provide the following data for DICOMSS and non-DICOMSS MROs.

1. MROs shipped

2. Percent shipped on time

3. Total denials

4. Partial denials

5. Denial percentage rate

(b) For each of the categories in subparagraph (a) above provide daily, month-to-date, and previous month totals.

(3) Transshipment performance (see figure 8 for sample display).

(a) Provide the following data for completed transshipments.

1. Shipment units

2. Weight shipped

3. Cube shipped

4. Average processing time

(b) For each category in subparagraph (a) above maintain previous day, month-to-date, and last month totals.

(4) SEAVAN MRO Bank Hold Times, Date Received to Date Released (see figure 9 for sample display).

(a) Provide day categories 0 through 28 and 29 and over.

(b) Provide totals for previous day, month-to-date, and last month.

(5) SEAVAN Warehouse Processing, Date Released to Date Offered (see figure 9 for sample display).

(a) Provide day categories 0 through 8 and 9 and over.

(b) Provide totals for month-to-date and last month.

(6) SEAVAN Terminal Hold Times, Date Offered to Date Shipped (see figure 10 for sample display).

(a) Provide day categories 0 through 8 and 9 and over.

(b) Provide totals for month-to-date and last month.

(7) Total Depot Processing Time, Date received to Date Shipped (see figure 10 for sample display).

(a) Provide day categories 0 through 28 and 29 and over.

(b) Provide totals for month-to-date and last month.

(8) Days MROs Received Prior to RDD (DICOMSS only) (see figure 11 for sample display).

(a) Provide day categories 29 and over, 38 through 1 and 0 and less.

(b) Provide totals for month-to-date and last month.

(9) DICOMSS MROs by cycle (see figure 12 for sample display).

(a) Provide Totals by cycle of unreleased MROs.

(b) Provide Totals by cycle of In-Process MROs.

APPENDIX B-281

SEAVAN ADVANCED TRANSPORTATION CONTROL AND MOVEMENT DOCUMENTS FOR TRANSSHIPMENTS

1. TCMDs are received via AUTODIN or with the materiel. The TCMDS are input via the DLA Entry system to ASSP. The TCMDs must be in sequence by container number, document number, document identifier, and card sequence number. The transactions are validated. Errors which are detected will be flagged and the TCN will be listed on the Advance TCMD Error Report, F-216.

2. REFERENCES

a. Appendix D-201

b. Appendix F-216

3. INPUTS

The TCMD are received from the entry system.

4. VALIDATION

The following are edit validations for card entries.

a. Consolidation Prime Data

FIELD LEGEND	FIELD POSITIONS	VALIDATION
Document Identifier Code	1-3	Must be TX3 or TJ3.
Container Number	4-8	Alpha/numeric filled.
DoDAAC of Consolidating Activity	9-14	Alpha/numeric filled.
Commodity	15-17	Numeric filled.
Type Cargo	18	Alpha, no blanks.
Special Handling	19	Alpha/numeric, no blanks.
Air Dimension	20	If not blank, blank out.
POE	21-23	If not blank, blank out.
POD	24-26	Alpha/numeric filled.
Mode	27	Alpha/numeric.
Type Pack	28-29	Alpha/numeric filled.

FIELD LEGEND	FIELD POSITIONS	VALIDATION
Non-MILSTRIP TCN	30-46	Alpha/numeric filled.
BBP or Ultimate Consignee for Trailer	47-52	Alpha/numeric filled.
Transportation Priority	53	Must be 1, 2, 3, A, B, C, /, S or T.
Earliest RDD	54-56	No edit.
Project	57-59	No edit.
Day Shipped	60-62	Numeric 001 to 366.
ETA	63	Alpha/numeric filled.
Transportation Account Code (TAC)	64-67	No edit.
One Piece	68-71	Must be 00001.
Gross Weight	72-76	Numeric filled.
Gross Cube	77-80	Numeric filled.

NOTE: There must be at least two T_4 cards containing a matching Container Number. There may be multiple T_4, T_5, T_6, T_9 cards with matching Container Number. The MRO type record which will be passed to ASSP Shipment Planning will be comprised of data from the T_3 card when present.

b. Shipment Unit Prime Data

FIELD LEGEND	FIELD POSITIONS	VALIDATION
Document Identifier Code	1-3	TX4 or TJ4 must be preceded by a TX3 TJ3 with matching Container Number. TX1 or TJ1 for other inputs.
Container/Trailer Number	4-8	Blank or alpha/numeric filled. If pos. 1-3 is T_4 then field must match container number of preceding T_3.
DoDAAC of Consolidating Activity	9-14	Alpha/numeric filled.
Commodity	15-17	Numeric filled.

FIELD LEGEND	FIELD POSITIONS	VALIDATION
Type Cargo	18	Alpha, no blanks.
Special Handling	19	Alpha/numeric, no blanks.
Air Dimension	20	If not blank, blank out.
POE	21-23	If not blank, blank out.
POD	24-26	Alpha/numeric filled.
Mode	27	Alpha/numeric.
Type Pack	28-29	Alpha filled.
MILSTRIP TCN	30-46	Alpha/numeric filled.
BBP or Ultimate Consignee for Trailer	47-52	Alpha/numeric filled.
Transportation Priority	53	Must be 1, 2, 3, A, B, C, /, S or T.
Earliest RDD	54-56	No edit.
Project	57-59	No edit.
Day Shipped	60-62	Numeric 001 to 366.
ETA	63	Alpha/numeric.
Transportation Account Code (TAC)	64-67	No edit.
Pieces	68-71	Numeric filled greater than 0.
Gross Weight	72-76	Numeric filled greater than 0.
Gross Cube	77-80	Numeric filled greater than 0.

NOTE: A MRO type record will be passed to ASSP Shipment Planning using data from T_1 cards. No MRO type records are built for T_4 cards.

c. Outsize dimension data T_5 will not be maintained.

d. Hazardous NSN/IMCO Trailer Card (this is a mandatory input if Prime Shipment Unit Data Card was TJ1 or TJ4).

FIELD LEGEND	FIELD POSITIONS	VALIDATION
Document Identifier Code	1-3	TJ6.
Container Number	4-8	Must match previous TJ1 or TJ4.
Consignor	9-14	No edit.
Commodity	15-17	No edit.
Type Cargo	18	No edit.
Special Handling	19	No edit.
Air Dimension	20	No edit.
POE	21-23	No edit.
POD	24-26	No edit.
Mode	27	No edit.
Type Pack	28-29	No edit.
MILSTRIP TCN	30-46	Must match previous TJ1 or TJ4.
BBP or Ultimate Consignee for Trailer	47-52	No edit.
Transportation Priority	53	No edit.
National Stock Number	54-66	Alpha/numeric filled.
Blank	67-70	No edit.
UN Class	71-72	Alpha/numeric filled.
Blank	73	No edit.
UN or NA	74-75	Use whichever is in Freight Description File.
UN or NA Number	76-79	Alpha/numeric filled.
Compatibility Group	80	Must be 0. If not, make change.

e. Miscellaneous Information (if prime shipment unit card was TJ1 or TJ4 there must be at least one TJ9; otherwise, this is an optional transaction).

FIELD LEGEND	FIELD POSITIONS	VALIDATION
Document Identifier Code	1-3	TX9 or TJ9. The second position must agree with prime shipment unit data card.
Container Number	4-8	Must match previous T_1 or T_4 card.
Consignor	9-14	No edit.
Commodity	15-17	No edit.
Type Cargo	18	No edit.
Special Handling	19	No edit.
Air Dimension	20	No edit.
POE	21-23	No edit.
POE	24-26	No edit.
Mode	27	No edit.
Type Pack	28-29	No edit.
MILSTRIP TCN	30-46	Must match previous T_1 or T_4.
BBP or Ultimate Consignee for Trailer	47-52	No edit.
Transportation Priority	54-79	No edit.
Miscellaneous Information	54-79	No edit.
Card Sequence Number	80	T_9 cards must be inclusive from 1 through highest number (maximum 9 cards).

APPENDIX B-282

ON-LINE TRANSPORTATION ACCOUNT CODE FILE UPDATE/INQUIRY

1. This transaction is used to update and inquire the Transportation Account Code (TAC) file. Data from this file is used during the SEAVAN documentation process to assign TACs to eligible shipment unit records, and on-line MRO preparation.

2. Instructions pertinent to the assignment of TACs are documented in DoD 4500.32-R, Volume II, specific chapters as follows:

a. Navy TACs - chapter 7, section 2.

b. Coast Guard TACs - chapter 9, paragraph 9-3.

3. REFERENCE

Appendix E-054 P

4. Process violations will appear as error messages on the terminal.

5. The following data elements are entered via CRT.

FIELD LEGEND	NO. OF CHAR.	TYPE ENTRY	EXPLANATION/INSTRUCTIONS
Action Code*	1	A	Enter: I - Inquiry. A - Add. D - Delete.
TAC-Key	6	A/N	For Navy TACs enter 2-position Materiel Cognizance Code, left-justified. For Coast Guard TACs enter last 5 positions of the Activity Address Code.
TAC*	4	A/N	Enter TAC per paragraphs 2a and b above.

*Mandatory entries.

6. VALIDATION

FIELD LEGEND	VALIDATION
Action Code	Must be Alpha A, D or I.
TAC-KEY	Alphanumeric. For Navy TACs, last four positions may be blank.
TAC	Alphanumeric.

APPENDIX B-283

SEAVAN RECEIPT TRANSACTIONS FOR TRANSSHIPMENTS

1. Materiel is received from shipping activities for transshipment. Incheck materiel and record for CRT input, TCN, pieces, weight, cube and location where materiel is staged. Also determine if materiel requires refrigeration, if it will contaminate other materiel or if it is subject to contamination. If TCMD cards are received with the materiel they must be input through the DLA MOWASP Entry system or be keyed in via CRT per appendix B-284.

2. REFERENCE

Appendix D-199, Processing SEAVAN Transshipment Receipt Transactions

3. Entry of the following data elements will record receipt of the transshipment. If Advanced Transportation Control and Movement Data (ATCMD) are available a shipment planning record will be created. Otherwise, the transshipment will be suspended until ATCMD data are provided.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Transportation Control	17	A/N	Enter transshipment TCN.
Pieces	4	N	Enter total number of pieces.
Weight	5	N	Enter total weight of all pieces.
Cube	4	N	Enter total cube of all pieces.
Location	9 or 12	A/N	Enter location where materiel is staged (right-justified).
Special Requirements Code	1	N	Enter Special Requirements Code 3, 5 or 6 if materiel requires refrigeration or leave blank.
Compatibility Code	1	A	Enter A if materiel is subject to contamination. Enter B if materiel is contaminating or leave blank.
Date Received	5	N	Enter Julian date received if different than current date.
Override Indicator	1	N	Enter 1 if input data are overlay previously posted receipt data.

FIELD LEGEND	VALIDATION
Transportation Control Number	Alphanumeric filled.
Pieces	Numeric greater than zero.
Weight	Numeric greater than zero.
Cube	Numeric greater than zero.
Location	Alpha/numeric. May be 9 or 12 positions, right-justified.
Special Requirements Code	Must be 3, 5, 6 or blank.
Compatibility Code	Must be A, B or blank. If blank, the program should assign Z.
Date Received	If not entered, record current date. Otherwise, cannot be greater than current date and year position one and two cannot be less than current year minus one. Last three positions must be 001-366.
Override Indicator	Must be 0 or 1.

APPENDIX B-284

SEAVAN TRANSSHIPMENT FILE TCMD ADD/CHANGE/ DELETE/INQUIRE

1. This transaction is utilized to inquire a TCN or revise/record Transportation Control and Movement Document (TCMD) data. Invalid TCMD data received via AUTODIN or card input through Data Entry are output on the F-216, Transshipment Error Report. When transshipment materiel is received and Advanced TCMD data are not available, this transaction may be used to input TCMD data. This input will also provide a display from the Transshipment History File if the shipment (TCN) has completed processing.

2. REFERENCES

a. Appendix D-200

b. Appendix F-216

3. Enter the following:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Transportation Control Number	17	A/N	Enter TCN.

4. Input of the TCN will result in display of the following data elements if the TCN is still in-process. A Status Code of S will indicate invalid TCMD Data. A Suspense Code of P will indicate a difference in TCMD and received number of pieces. A Suspense Code of R will indicate TCMD data are valid but receipt data have not been posted. Suspense Code T indicates receipt data are posted but TCMD data are not available. Status Code A indicates TCMD and receipt data are available and transshipment is being planned or processed.

a. S/U Prime Data

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Input TCN	17	A/N	From original entry.
Action Code	1	A	Enter A if adding new record. Enter C if changing existing record. Enter D if deleting existing record. Leave blank if no action to be taken and enter next inquiry in field titled next transaction.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
TCMD Data	80	A/N	All data in the following fields are from the transshipment file, if available.
T_1,T_3 or T_4 Document Identifier	(3)	A/N	
Container Number	(5)	A/N	
Consignor	(6)	A/N	
Water Commodity	(5)	A/N	
Water POD	(3)	A/N	
Mode of Shipment	(1)	A/N	
Type Pack	(2)	A/N	
Consignee	(6)	A/N	
Transportation Priority	(1)	A/N	
RDD	(3)	A/N	
Proj	(3)	N	
Day Shipped	(3)	N	
ETA Code	(1)	A/N	
Transportation Account Code	(4)	A/N	
TCMD Pieces	(4)	N	
TCMD Weight	(5)	N	
TCMD Cube	(4)	N	
Receipt Data	22	A/N	Not updatable.
Location	(9 or 12)	A/N	Rignt-justified.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Pieces	(4)	N	
Weight	(4)	N	
Cube	(5)	N	

b. IMCO Trailer Card

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
TCMD Data	22	A/N	From transshipment file.
TJ6 Document Identifier	(3)	A/N	
National Stock Number	(13)	A/N	
UN Class	(2)	A/N	
UN Number	(4)	A/N	

c. Miscellaneous Information Trailer Cards (up to 9 cards)

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
TCMD Data	30	A/N	From transshipment file.
T_9 Document Identifier	(3)	A/N	
Miscellaneous Information	(26)	A/N	
Card Sequence	(1)	N	

d. Transshipment Status

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Transshipment Status	1	A	From transshipment file.

e. Next Transaction

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Next Transaction	17	A/N	Enter the next TCN inquiry.

5. If the transshipment is a consolidated pack TX3, the operator, upon completion of review of the RDRO Container Data, should press Enter. The program will provide a S/U Prime and Trailer Data display for each shipment unit in the consolidation.

6. Edit and validations of data elements when input Action Code is A or C will be the same as for appendix B-281.

7. The following data elements will be displayed from the Transshipment History File if the shipment (TCN) is completed.

FIELD LEGEND	NO. OF CHAR .	TYPE	EXPLANATION/INSTRUCTIONS
Load Number	4	N	SEAVAN Load number if TCN is shipped via Mode V.
Date Shipped	5	N	Date TCN was shipped.
Pieces	4	N	Number of pieces shipped for TCN.
Weight	5	N	Total weight shipped for TCN.
Cube	4	N	Total cube shipped for TCN.
Originating Consignor	6	A/N	Orginating consignor for shipment.
Date Received	5	N	Date TCN received at transshipment activity.
Mode Shipped	1	A	Mode TCN was shipped.

APPENDIX B-286

SEAVAN CONSIST HEADER CARD

1. This transaction is produced as a result of the print/transceive indicator being 2 or 3 in the SEAVAN Destination which requires a Consist, F-62 (SEAVAN Table 4).

2. REFERENCE

Appendix B-277

3. DATA ELEMENTS

a. Header card, card sequence 1

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	ZWF, provided by program.
Van Number	4-12	From in-process file.
Consignee	13-18	From in-process file.
Load Number	19-22	From in-process file.
Card Sequence	23	Program will assign a 1.
Destination Communication Routing Identifier	24-30	From SEAVAN Table 4.
Owner	31-34	From in-process file.
Van Size	35-36	From in-process file.
Commodity	34-41	From in-process file.
POE	42-44	From in-process file.
POD	45-47	From in-process file.
Mode	48	From in-process file.
Type Pack	49-50	From in-process file.
SEAVAN TCN	51-67	From in-process file.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Priority	68	From in-process file.
SDD	69-71	Computed.
CD	72	In-process record.
Ship Date	73-77	From in-process file.
Blank	78-88	Leave blank.

b. Header card, card sequence 2

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	ZWF, provided by program.
Van Number	4-12	From in-process file.
Consignee	13-18	From in-process file.
Load Number	19-22	From in-process file.
Card Sequence	23	Program will assign a 2.
Inside Van Cube	24-28	From in-process file.
Total Pieces	29-33	From in-process file.
Total Weight	34-38	From in-process file.
Van Seal Number	43-50	From in-process file.
Blank	51-80	Leave blank.

APPENDIX B-287

SEAVAN CONSIST LINE ITEM CARD

1. This transaction is produced as a result of the print/transceive indicator being 2 or 3 in the SEAVAN Destination which requires a Consist, F-62 (SEAVAN Table 4).

2. REFERENCE

Appendix B-277

3. DATA ELEMENTS

a. Line item card 1

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	ZWG, provided by program.
Van Number	4-12	From in-process file.
Consignee	13-18	From in-process file.
Requisition Number	19-27	From SEAVAN MRO file.
Card Sequence Number	28	Program will assign a 1.
National Stock Number	29-41	From SEAVAN MRO file.
Pieces	42-46	From SEAVAN MRO file.
Unit Pack	47-49	From SEAVAN MRO file.
Quantity Shipped	50-54	From SEAVAN MRO file.
Quantity Ordered	55-59	TRANS will be printed for a transshipment; otherwise, if quantity shipped is different than quantity ordered, move quantity ordered from SEAVAN MRO file or leave blank.
Blank	60-80	Leave blank.

best copy available

b. Line item card 2

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	ZWG, provided by program.
Van Number	4-12	From in-process file.
Consignee	13-18	From in-process file.
Requisition Number	19-27	From SEAVAN MRO file.
Card Sequence Number	28	Program will assign a 2.
Unit Price	29-36	From SEAVAN MRO file.
Extended Price	37-44	From SEAVAN MRO file.
RDD	45-47	From SEAVAN MRO file.
Weight	48-52	From SEAVAN MRO file.
Cube	53-57	From SEAVAN MRO file.
Troop Issue Flag	58	An asterisk will be placed in this column for Troop Issue items.
Blank	59-80	Leave blank.

c. Line item card 3

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	ZWG, provided by program.
Van Number	4-12	From in-process file.
Consignee	13-18	From in-process file.
Requisition Number	19-27	From SEAVAN MRO file.
Card Sequence Number	28	Program will assign a 3.
Item Description	29-79	First 51 positions of the in-process line item record description.
Blank	80	Leave blank.

APPENDIX B-290

COPAD MRO INQUIRY AND UPDATE PROCESS

1. PURPOSE

This transaction is used to inquire or update needed shipping data for process through the MOWASP/MOFAST system and release COPAD MRO to the in-process file. This input is made randomly via CRT.

2. REFERENCES

a. Appendix D-212, COPAD MRO Documentation Process

b. Appendix E-275 P Part B, COPAD MRO Inquiry and Update Process

3. DATA ELEMENTS

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
COPAD Section Code	2	A	Enter PR.
Contract Call Number	5	A/N	Enter Contract Call Number.
Document Number	4	N	Enter last 4 positions of the document number.

4. VALIDATION

a. Initial entry

FIELD LEGEND	VALIDATION
COPAD Section Code	Must be PR.
Contract Call Number	Must match recorded call number.
Document Number	Must match last 4 positions of recorded document number.

b. Update elements

FIELD LEGEND	VALIDATION
Part Number	Must contain at least 1 character.
Quantity Shipped	Numeric, greater than zero.
Unit Weight	Numeric greater than zero, two decimals.
Unit Cube	Numeric greater than zero, three decimals.

FIELD LEGEND	VALIDATION
Unit Price	Numeric greater than zero.
Water Commodity	Alpha/numeric or blank.
Special Req-CDE	Alpha/numeric or blank.
Air Dimension	Alpha or blank.
Air Commodity	Alpha/numeric or blank.
Nomenclature	Alpha/numeric or blank.
NMFC/SFX	Numeric or blank.
LTL	Alpha or blank.
Mode	Alpha/numeric or blank.
Physical Security Code	Alpha or blank.
UI	Alpha or blank.
Pack Location	Alpha/numeric.

APPENDIX B-291

COPAD PART NUMBER PROCESS

1. PURPOSE

This transaction is prepared whenever an inquiry, add, update or delete is needed to the COPAD Part Number file. This input is made randomly via CRT.

2. REFERENCES

a. Appendix D-212, COPAD MRO Documentation and Release Process

b. Appendix E-275 P Part C, Part Number Process

3. DATA ELEMENTS

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
COPAD Section Code	2	A	Enter PN.
Action	1	A	Enter I to inquire, A to add, U to update and D to delete.
Part Number	15	A/N	Enter part number.

4. VALIDATION

a. Initial entry

FIELD LEGEND	VALIDATION
COPAD Section Code	Must be PN.
Action	Must be A, I, U or D.
Part Number	Must contain 6 characters for an add action. Must match recorded Part Number for inquiry, update or delete action.

b. Update elements

FIELD LEGEND	VALIDATION
Unit Weight	Numeric, two decimals.
Unit Cube	Numeric, three decimals.

FIELD LEGEND	VALIDATION
Water Commodity	Alpha/numeric or blank.
Special Req-CDE	Alpha/numeric or blank.
Air Dimension	Alpha or blank.
Air Commodity	Alpha/numeric or blank.
Nomenclature	Alpha/numeric or blank.
NMFC/SFX	Numeric or blank.
LTL	Alpha or blank.
Physical Security Code	Alpha or blank.

APPENDIX B-292

DEPOT COMPLAINT ACKNOWLEDGEMENT AND CLOSE-OUT CARD (CD4)

1. This procedure defines the Document Identifier Code (DIC) CD4 card format, which is one of four card formats used to transmit customer complaint data between the DSC/ICP and the user depot (see appendices B-161, B-162 and B-163). The DIC CD4 card format is generated solely by the DSC/ICP, and functions independently of the CD1, CD2 and CD3 formats. The initial CD4 transaction (header record) is generated as acknowledgment of receipt of a depot complaint. The center may use interim transactions (trailer records) to extend the response suspense date, and will generate the final transaction providing the depot with instructions for disposition of the discrepant materiel.

2. On receipt at the depot, a card image of the transaction will appear on the F-150 Report, Part 5, CD4 Transaction Listing, and will also be inquireable via program $$UWTM01 (appendix E-092) ICP-FILE inquiry option.

3. DIC CD4 card format sample follows. The field legends correspond to field titles shown in the ICP-FILE display, program $$UWTM01 application.

FIELD LEGEND	FIELD POS.	NO. TYPE CHARACTER	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	3 A/N	Document Identifier Code CD4.
RIC To	4-6	3 A/N	Routing Identifier Code To. Not shown in ICP-FILE display.
Indicator	7	-	P for Partial, F for Final. (Indicated on trailer records only)
NSN/Part Number	8-22	15 A/N	National Stock Number/Part Number.
Unit of Issue Code	23-24	2 A	Unit of Issue.
Quantity	25-29	5 N	Complaint Quantity.
Document Number	30-43	14 A/N	Document or Contract Number (position 43 may be blank).
Suffix	44	1 A	Suffix code.
CLIN	45-50	6 A/N	Contract Line Item Number or leave blank.

FIELD LEGEND	FIELD POS.	NO. TYPE CHARACTER	EXPLANATION/INSTRUCTIONS
Suspense Date	51-55	5 N	Two-position year and Julian date provided by the ICP. Will appear on header record and trailer record indicating interim reply.
Dollar Value	51-57	7 N	Total dollar value will be reflected on subsequent trailer records where an interim reply is not indicated.
Control Number	58-66	9 A/N	CDCS Control Number.
RIC From	67-69	3 A/N	DSC RIC.
Blank	70	-	Field position not used.
Condition Code	71	1 A	May be blank.
Discrepancy Code	72-73	2 A/N	CDCS Discrepancy Code on initial and interim transmissions. May be blank on close-out actions.
Disposition Code	74-75	2 A	CDS Disposition Code (appendix A-95). If filled, record cannot have interim reply code.
Interim Reply Code	76	1 A	Applicable code (appendix A-129). If filled, record cannot have disposition code.
Call/Order Number	77-80	4 A/N	Call/Order Number or blank.

4. VALIDATION

Violations will appear on appendix F-150, part I CD1/CD3/CD4 Activity List.

FIELD POSITION	VALIDATION	VIOLATION MESSAGE
25-29	5 N	QUANTITY CANNOT BE ZEROS INPUT QUANTITY GREATER THAN ORIGINAL QUANTITY
51-55	5 N	INVALID SUSPENSE DATE
56-57	7 N	INVALID DOLLAR VALUE
58-66	9 A/N	INVALID CONTROL NUMBER

NOTE: If any of these violations occur, records will have to be retransmitted from the center. Notify the responsible DSC of these violations.

FIELD POSITION	VALIDATION	VIOLATION MESSAGE
74-75	2 A	INVALID DISPOSITION CODE
76	1 A	INVALID INTERIM REPLY CODE

NOTE: If any of these violations occur, records will have to be retransmitted from the center. Notify the responsible DSC of these violations.

APPENDIX B-294

COPAD ORDER DATA CARDS

1. PURPOSE

a. These transactions are used to transmit COPAD Order Data from DCSC to DDMD via AUTODIN Daily after each SAMMS Procurement Process Cycle.

b. COPAD Order Data is transmitted from DCSC to DDMP via AUTODIN in a series of card image records. The AUTODIN records are identified by a group code (position 7 of each record) and a record type code (position 27-28 of each record). All cards will be identified by DIC CJW.

c. The relationship between group codes and record types is as follows:

GROUP CODE (POS. 7)	RECORD TYPE CODE (POS. 27-28)	EXPLANATION
0	00	Control Record-Statistical Data. Card Sequence 1.
0	04	Control Record-Vendor Name Card Sequence 2.
0	06	Control Record-Vendor Street Address. Card Sequence 3.
0	08	Control Record-Vendor city/ state/ZIP. Card Sequence 4.
1,2,3	01	MRO/SIS Data for IPG I (Code 1) IPG II (Code 2) IPG III (Code 3). Card Sequences 5.
1,2,3	02	MRO/SIS Data for IPGs cited above. Card Sequence 6.
1,2,3	03	MRO/SIS Data for IPGs cited above. Card Sequence 7.
1,2,3	20 thru 79	Descriptive data (exception type requisitions and non-stock NSNs W/PID) for IPGs above. Card Sequences 8 through 68 if required.

d. Each transaction will require from 3 to 63 Card Image Records. Each transmission will also contain four separate image records containing control data. The control records (group 0, record codes 00, 04, 06 and 08) will precede the MRO/SIS Data Records. The next series of records transmitted will be the Group Code 1 (IPG I) records. There will always be three cards per order (records 01, 02 and 03); any additional cards for a specific order will be record codes 20 through 79 (Descriptive Data). After all IPG I items are transmitted, Group 2 (IPG II) and then Group 3 (IPG III) items will be transmitted.

2. REFERENCES

a. Appendix D-212, COPAD MRO Documentation and Release Process

b. Appendix C-12, COPAD Order/Response Form

3. DATA ELEMENTS

a. Control Record; Statistical Data.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
Routing Identifier Code	4-6	Enter SAJ.
Group Code	7	Enter 0.
Vendor Code	8-12*	Enter Vendor Code.
Blank	13-26	Leave blank.
Record Type Code	27-28	Enter 00.
Process Date	29-33	Enter Julian date, 5-position number.
Number of Calls	34-38	Enter total number of procurement orders included in this transmission.
Number of IPG 1 Calls	39-43	Enter number of IPG I orders included in this transmission.
Number of IPG II Calls	44-48	Enter number of IPG II orders included in this transmission.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Number of IPG III Calls	49-53	Enter number of IPG III orders included in this transmission.
Number of Records	54-59	Enter total number of cards in this transmission.
Blank	60-80	Leave blank.

b. Control Record; Vendor Name and Address Record. Record Type 04 through 08.

(1) First Line Vendor Address

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
Routing Identifier Code	4-6	Enter SAJ.
Group Code	7	Enter 0.
Vendor Code	8-12*	Enter Vendor Code.
Blank	13-26	Leave blank.
Record Type	27-28	Enter 04.
Vendor Name	29-70	Enter first line of vendor address which corresponds with vendor code (pos. 8-12). Mandatory entry.
Blank	71-80	Leave blank.

(2) Second Line Vendor Address

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
Routing Identifier Code	4-6	Enter SAJ.
Group Code	7	Enter 0.
Vendor Code	8-12*	Enter Vendor Code.
Blank	13-26	Leave blank.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Record Type	27-28	Enter 05.
Vendor Address	29-70	Enter second line of vendor address identified by vendor code in (pos. 8-12). Mandatory entry.
Blank	71-80	Leave blank.

(3) Third Line Vendor Address

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
Routing Identifier Code	4-6	Enter SAJ.
Group Code	7	Enter 0.
Vendor Code	8-12*	Enter Vendor Code.
Blank	13-26	Leave blank.
Record Type	27-28	Enter 06.
Vendor Address	29-70	Enter third line of vendor address of Vendor Code in pos. 8-12. Mandatory entry.
Blank	71-80	Leave blank.

(4) Fourth Line Vendor Address

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
Routing Identifier Code	4-6	Enter SAJ.
Group Code	7	Enter 0.
Vendor Code	8-12*	Enter Vendor Code.
Blank	13-26	Leave blank.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Record Type	27-28	Enter 07.
Vendor Address	29-70	Enter fourth line of vendor address identified by vendor code in (pos. 8-12). Optional entry.
Blank	71-80	Leave blank.

(5) Fifth Line Vendor Address

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
Routing Identifier Code	4-6	Enter SAJ.
Group Code	7	Enter 0.
Vendor Code	8-12*	Enter Vendor Code.
Blank	13-26	Leave blank.
Record Type	27-28	Enter 08.
Vendor Address	29-70	Enter fifth line of vendor address of Vendor Code in pos. 8-12. Optional entry.
Blank	71-80	Leave blank.

c. Record Type 01, (MRO/SIS Data)

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
Routing Identifier Code	4-6	Enter SAJ.
Group Code	7	For IPG I, enter 1; for IPG II, enter 2; for IPG III, enter 3.
Vendor Code	8-12*	Enter Vendor Code.
PR Number	13-26	Enter Purchase Request Number assigned to this MRO.
Record Type	27-28	Enter 01.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	29-31	Enter DIC of incoming requisition (A51, A52, A55 or A5E).
RIC TO	32-34	Enter RIC-TO of incoming requisition.
Media/Status Code	35	Enter Media and Status Code of incoming requisiton.
Stock/Part Number	36-50	Enter NSN/Part Number requested.
Unit of Issue	51-52	Enter U/I applicable to the stock number requested.
Quantity	53-57	Enter quantity of item requested.
Requisition Number	58-71	Enter Document Number of the requisition.
Suffix Code	72	a. Enter the suffix code when the requisition quantity is divided into separate supply actions. b. When the requisition quantity is not divided, this field should be left blank.
Supplementary Address	73-78	Enter code from requisition.
Signal Code	79	Enter code from requisition.
Blank	80	Leave blank.

d. Record type 02, (MRO/SIS Data; continuation of data on record type 01).

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
RIC TO	4-6	Enter SAJ.
Group Code	7	For IPG I, enter 1, for IPG II, enter 2, for IPG III, enter 3.
Vendor Code	8-12*	Enter Vendor Code.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
PR Number	13-26	Enter purchase request number for this MRO.
Record Type	27-28	Enter 02.
Fund Code	29-30	Enter code from MRO.
Distribution Code	31-33	Enter code from MRO.
Project Code	34-36	Enter code from MRO.
Priority Designator	37-38	Enter code from MRO.
Required Delivery Date	39-41	Enter date from requisition, when field is blank, leave blank.
Advice Code	42-43	Enter code from MRO.
RIC From	44-46	Enter S9J.
Purpose Code	47	Enter code from MRO.
Condition Code	48	Enter code from MRO.
Management Code	49	Enter code from MRO.
Type Package	50	Enter code from MRO.
Unit Price	51-57	Enter price from MRO.
Blank	58-80	Leave blank.

e. Record type 03, (MRO/SIS Data; continuation of data on record types 01 and 02).

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
RIC TO	4-6	Enter SAJ.
Group Code	7	For IPG I, enter 1, for IPG II, enter 2, for IPG III enter 3.
Vendor Code	8-12*	Enter vendor code.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
PR Number	13-26	Enter purchase request number for this MRO.
Record Code	27-28	Enter 03.
PIIN	29-45	Enter contract number for this MRO.
SIS Date	46-50	Enter Julian date shipment instruction sheet was issued.
Delivery Date	51-55	Enter vendor required delivery date.
Vender Code	56-60	Enter code of vendor supplying the materiel.
Substitute Code	61	Input X if substitute restriction is to be printed. Restriction will not print if field is left blank.
Quantity Code	62	Input X if quantity restriction is to be printed. Restriction will not print if field is left blank.
Blank	63-80	Leave blank.

f. Record types 04-08.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJW.
RIC To	4-6	Enter SAJ.
Group Code	7	For IPG I, enter 1, for IPG II, enter 2, for IPG III, enter 3.
Vendor Code	8-12*	Enter vendor code.
PR Number	13-26	Enter purchase request number for this MRO.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Record Type	27-28	Sequence item description cards from 04 through 08 as required**.
Data	29-69	Enter item descriptive data.
Blank	70-80	Leave blank.

*Reference: SAMMS Active PR File

**Record types will process in sequence (i.e., 21, 22, 23 etc.) until all descriptive data are transmitted for this order.

4. VALIDATION

a. Control record; statistical data.

FIELD LEGEND	VALIDATION
DIC	Must be CJW.
RIC	Must be SAJ.
Group Code	Must be 0.
Vendor Code	Filled, alpha/number.
Record Type Code	Must be 00.
Process Date	Filled, numeric.
Number of Calls	Filled, numeric, must be the sum of IPG 1, 2 and 3 calls (pos. 39-43, 44-48 and 49-53).
Number of Records	Filled, numeric.

b. Control record; name and address record; record type 4 through 8.

(1) First Line Vendor Address

FIELD LEGEND	VALIDATION
DIC	Must be CJW.
RIC	Must be SAJ.

FIELD LEGEND	VALIDATION
Group Code	Must be 0.
Vendor Code	Filled, alpha/numeric.
Record Type	Must be 04.
Vendor Name	Alpha/numeric 42 positions alpha/numeric allowed; vendor name must correspond to the above vendor code as listed in SAMMS active PR file. Mandatory entry.

(2) Second Line Vendor Address

FIELD LEGEND	VALIDATION
DIC	Must be CJW.
RIC	Must be SAJ.
Group Code	Must be 0.
Vendor Code	Filled, alpha/numeric.
Record Type	Must be 05.
Vendor Address	42 alpha/numeric positions allowed. Must correspond to the above vendor code as listed in SAMMS active PR file. Mandatory entry.

(3) Third Line Vendor Address

FIELD LEGEND	VALIDATION
DIC	Must be CJW.
RIC	Must be SAJ.
Group Code	Must be 0.
Vendor Code	Filled, alpha/numeric.
Record Type	Must be 06.
Vendor Address	42 alpha/numeric positions allowed; vendor address must correspond to the above vendor code as listed in SAMMS active PR file. Mandatory entry.

(4) Fourth Line Vendor Address

FIELD LEGEND	VALIDATION
DIC	Must be CJW.
RIC	Must be SAJ.
Group Code	Must be 0.
Vendor Code	Filled, alpha/numeric.
Record Type	Must be 07.
Vendor Address	42 alpha/numeric positions allowed. Must correspond to the above vendor code as listed in SAMMS active PR file. Optional entry.

(5) Fifth Line Vendor Address

FIELD LEGEND	VALIDATION
DIC	Must be CJW.
RIC	Msut be SAJ.
Group Code	Must be 0.
Vendor Code	Filled, alpha/numeric.
Record Type	Must be 08.
Vendor Address	42 alpha/numeric positions allowed; vendor address must correspond to the above vendor code as listed in SAMMS active PR file. Optional entry.

c. (Record type 1, MRO/SIS data) violation rejects will be listed on the F-85 report.

FIELD LEGEND	VALIDATION	VIOLATION CODE
Document Identifier Code	Must be CJW.	
Routing Identifier Code	Must be SAJ.	
Group Code	Must be 1, 2, or 3.	
Vendor Code	5 positions, alpha/numeric.	
PR Number	14 positons, alpha/numeric.	
Record Type	Must be 01.	
Document Identifier Code	A51, A52, A55 or A5E.	
RIC TO	RIC to of incoming requisition.	
Media/Status Code	No edit.	
Stock/Part Number	NSN/PN must contain at least six characters (A/N) in pos. 36-41 (no blanks).	AY
Unit of Issue	Alpha only.	AN
Quantity	Numeric, nct all zeros.	AS
Requisition Number	Alpha/numeric pos. 58-63, numeric pos. 64-67, alpha/numeric pos. 68, numeric pos. 69-71, no blanks.	AI
Suffix Code	Blank/alpha/numeric; except I, N, O, P, R, S, 4, 2, 1 or 0.	
Supplementary Address	Alpha/numeric/blanks.	BJ
Signal Code	Alpha A, B, C, D, J, K, L, M, W or X only.	AU

d. (Record type 2 MRO/SIS data) violation rejects will be listed on the F-85 report.

FIELD LEGEND	VALIDATION	VIOLATION CODE
Document Identifier Code	Must be CJW.	
Routing Identifier Code	Must be SAJ.	
Group Code	Must be 1, 2 or 3.	
Vendor Code	5 positions, alpha/numeric.	
PR Number	14 positions, alpha/numeric.	
Record Type	Must be 02.	
Fund Code	No edit.	
Distribution Code	No edit.	
Project Code	Must be JZ_.	
Priority Designator	Numeric 01 through 15 only System will assign 15 if not a valid entry.	
Required Delivery Date	Only validated when pos. 42-43 contains 2T, then all must be numeric.	3W
Advice Code	No edit.	
RIC (From)	Alpha/numeric must be in the Table and Control file.	AB
Purpose Code	Alpha, numeric or blank.	AQ
Condition Code	Alpha A, B, C, D, E, F, G, H, J, K, L or M only.	AF
Management Code	Alpha A, F, G, H, S or blank when pos. 44-46 is S9_. Alpha Z when pos. 29-31 of record type 01 is A55/A5E.	AW
Type Pack Code	No edit.	
Unit Price	Numeric other than all zeros.	AM

e. Record type 03, MRO/SIS data.

FIELD LEGEND	VALIDATION
Document Identifier Code	Must be CJW.
RIC To	Must be SAJ.
Group Code	Must be 1, 2 or 3.
Vendor Code	5 positions alpha/numeric.
PR Number	14 positions, alpha/numeric.
Record Code	Must be 03.
PIIN	17 positions, alpha/numeric.
SIS Date	5 positions, numeric.
Delivery Date	5 positions, numeric.
Vendor Code	5 positions, alpha/numeric.
Substitute Code	Blank or X.
Quantity Code	Blank or X.

f. Record types 04 through 08 item description.

FIELD LEGEND	VALIDATION
Document Identifier Code	Must be CJW.
RIC To	Must be SAJ.
Group Code	Must be 1, 2, or 3.
Vendor Code	5 positions, alpha/numeric.

FIELD LEGEND	VALIDATION
PR Number	14 positions, alpha/numeric.
Record Type	2 positions, numeric. Sequence record type codes starting with 04 through 08 if required.
Item Description Data	42 positions alpha/numeric.

APPENDIX B-295

NOTIFICATION OF COPAD VENDOR DELIVERY OF MATERIEL

1. PURPOSE

To inform DCSC that vendor delivery of requisitioned COPAD materiel had been made to DDMP.

2. REFERENCE

Appendix D-212, COPAD MRO Documentation and Release Process

3. DATA ELEMENTS

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter CJV.
RIC TO	4-6	Enter S9J.
PIIN Number	7-23	Enter Contract Number.
Quantity	24-28	Enter quantity received from vendor.
Date	29-33	Enter date of receipt.
U/I	34-35	Enter the U/I applicable to the stock number requested.
Blank	36-66	Leave blank.
RIC From	67-69	Enter SAJ.
Blank	70-80	Leave blank.

4. VALIDATION

FIELD LEGEND	FIELD POSITIONS	VALIDATION
RIC TO	4-6	Must be S9J.
PIIN	7-23	Alpha/numeric, filled.
Quantity	24-28	Numeric, filled.
Date of Receipt	29-33	Numeric, filled.

FIELD LEGEND	FIELD POSITIONS	VALIDATION
Unit of Issue	34-35	Alpha, filled.
RIC From	67-69	Must be SAJ.

APPENDIX B-300

UNIT ASSEMBLY END ITEM DATA

1. PURPOSE

This record format, along with formats B-301, B-302, B-303 and B-304, is used by the assembly manager to provide unit assembly data to the assembly activity. These formats may be used by the assembly activity to enter corrections, provide missing data and will also be used to transmit local changes and history data to the assembly manager. There will be one B-300 transaction for each build directive.

2. REFERENCES

None

3. DATA ELEMENTS

The following are the fields in the card format:

a. Card Sequence 1.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2A. Will be Z2A for local entry.
Routing Identifier Code To	4-6	Enter RIC of the activity designated to receive the transaction.
Card Sequence Number	7	Enter 1.
Stock Number	8-22	Enter the end item stock number (see note).
Document Number	23-36	Enter end item document number (see note).
Nomenclature	37-58	Enter the end item nomenclature (see note).
Estimated Cost	59-66	Enter estimated cost in dollars (see note).
Routing Identifier Code From	67-69	Enter the RIC of the generating activity.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Build Directive Number	70-73	Enter the applicable build directive number.
Action Code	74	Enter: C for changes. N for new transactions.
Unit Assembly Number	75-78	Enter applicable unit assembly number (see note).
Blank	79-80	Leave blank.

b. Card Sequence 2

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2A. Will be Z2A for local entry.
Routing Identifier Code To	4-6	Enter RIC of the activity designated to receive the transaction.
Card Sequence Number	7	Enter 2.
Blank	8-19	Leave blank.
Total Number of Assemblages	20-24	Enter the number of assemblages to be built (see note).
Total Number of Component Data Records	25-29	Enter the total number of components in the build directive.
Ship To Activity Address Code	30-35	Enter AAC of the ship-to-activity (see note).
Project Order Number	36-50	Enter project order number (see note).
Blank	51-55	Leave blank.
End Item Receipt Document Number	56-69	Enter document number for end item receipt (see note).
Build Directive Number	70-73	Enter the applicable build directive number

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Action Code	74	Enter: C for changes. N for new transactions.
Blank	75-80	Leave blank.

NOTE: This element is eligible for change when Action Code is C. Special validation, when required, is provided in the validation portion of this appendix.

4. VALIDATION

Violations will appear on the appendix F-85 Report for correction by the assembly activity.

a. Card Sequence 1.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2A or Z2A.	AA
4-6	Alpha/numeric, must be filled.	AC
7	Must be 1.	RA
8-22	Alpha/numeric, must contain at least 6 characters no blanks in pos. 8-13. If Action Code is C, may be blank.	AY
23-36	Positions 1-6 alpha/numeric, positions 7-10 numeric, positions 11-14 alpha/numeric. If BDN begins with 8, must not have blanks or all zeros. If BDN begins with 7 or if Action Code is C, may be blank.	AI
59-66	Numeric or blank.	RB
67-69	Alpha/numeric must be in the table and control file.	AB
70-73	Alpha/numeric. First position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
74	Must be C or N.	CF

FIELD POSITIONS	VALIDATION	VIOLATION CODE
75-78	Alpha/numeric, may be blank, or contain embedded blanks.	RF

b. Card Sequence 2.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2A, or Z2A.	AA
4-6	Alpha/numeric, must be filled.	AC
7	Must be 2.	RA
20-24	Numeric, not all zeros or blank when Action Code is N. If Action Code is C may be blank when BDN begins with 7, no validation if BDN begins with 8.	RG
25-29	Numeric, not all zeros or blank.	RI
30-35	Alpha/numeric or blank.	RJ
56-69	Positions 1-6 alphanumeric, positions 7-10 numeric, positions 11-14 alphanumeric, must not have blanks or all zeros. If Action Code is C, may be blank.	AI
70-73	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
74	Must be C, or N.	CF

APPENDIX B-301

UNIT ASSEMBLAGE CONTROL DATA

1. PURPOSE

This record format, along with formats B-300, B-302, B-303 and B-304 is used by the assembly manager to provide unit assembly data to the assembly activity. These formats will be used by the assembly activity to enter corrections, provide missing data and also to transmit changes and history data to the assembly manager. There will be one B-301 transaction for each assemblage within build directive.

2. REFERENCE

None

3. DATA ELEMENTS

The following are the fields in the card format:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2B. Will be Z2B for local entry.
Routing Identifier Code To	4-6	Enter the RIC of the activity designated to receive the transaction.
Assemblage Identification Number	7-8	Enter the applicable identification number.
Blank	9-44	Leave blank.
Assemblage Control Number	45-52	Enter the applicable assemblage control number.
Blank	53-66	Leave blank.
Routing Identifier Code From	67-69	Enter the RIC of the generating activity.
Build Directive Number	70-73	Enter the applicable build directive number.
Action Code	74	Enter: N for new transactions
Blank	75-80	Leave blank.

4. VALIDATION

Violations will appear on the appendix F-85 Report for correction by the assembly activity.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2B or Z2B.	AA
4-6	Alpha/numeric, must be filled.	AC
7-8	Numeric. 1-20 filled.	RK
45-52	Alpha/numeric, must be filled.	RL
67-69	Alpha/numeric must be in the table and control file.	AB
70-73	Alphanumeric. Filled, first positions must be 8.	RD
74	Must be N.	CF

APPENDIX B-302

UNIT ASSEMBLY FUNCTION DATA

1. PURPOSE

This record format, along with formats B-300, B-301, B-303 and B-304, is used by the assembly manager to provide unit assembly data to the assembly activity. These formats will be used by the assembly activity to make corrections, provide missing data and will also be used to transmit changes and history data to the assembly manager. There will be one B-302 transaction for each function/group within build directive and one B-302 for each subfunction within build directive.

2. REFERENCES

None

3. DATA ELEMENTS

The following are the fields in the card format.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2C. Will be Z2C for local entry.
Routing Identifier Code To	4-6	Enter the RIC of the activity designated to receive the transaction.
Blank	7-22	Leave blank.
Function/Group Code	23	Enter the applicable Function/Group Code.
Subfunction Code	24-25	Enter applicable subfunction code.
Function/Group Name	26-45	Enter the function group name for the function code entered.
Subfunction Name	(26-45)	Enter subfunction name for code entered.
Blank	46-66	Leave blank.
Routing Identifier Code From	67-69	Enter the RIC of the generating activity.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Build Directive Number	70-73	Enter the applicable build directive number.
Action Code	74	Enter: D for deletions. A for additions. C for changes. N for new transactions.
Blank	75-80	Leave blank.

4. VALIDATION

Violations will appear on the appendix F-85 Report for correction by the assembly activity.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2C or Z2C.	AA
4-6	Alpha/numeric, must be filled.	AC
23	Alpha, blank if pos. 24-25 are filled.	RM
24-25	Alpha/numeric, blank if pos. 23 is filled.	RN
67-69	Alpha/numeric must be in the table and control file.	AB
70-73	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
74	Must be A, C, D or N.	CF

APPENDIX B-303

UNIT ASSEMBLY COMPONENT DATA

1. PURPOSE

This record format, along with formats B-300, B-301, B-302 and B-304, is used by the assembly manager to provide unit assembly data to the assembly activity. These formats will be used by the assembly activity to make corrections, provide missing data and will also be used to transmit local changes and history data to the assembly manager. There will be one set of B-303 transactions for each component within build directive. Card sequence format 1 is mandatory for new build directives and for additions to existing build directives. Any of the four card sequence formats can be used independently for changes, only card sequence format 1 is required for deletes.

2. REFERENCE

None

3. DATA ELEMENTS

The following are the fields in the card format:

a. Card Sequence 1.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2D. Will be Z2D for local entry.
Routing Identifier Code	4-6	Enter RIC of the activity designated to receive the transaction.
Card Sequence Number	7	Enter 1.
Stock Number	8-22	Enter the component stock number.
Basic Quantity	23-29	Enter the component quantity required for one assemblage. Field represents 5 whole numbers and two decimal places (see note).
Extended Quantity	30-36	Enter extended quantity computed by multiplying the basic quantity X or No. of assemblages and subtracting the quantity authorized short and quantity sub (see note).

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Nomenclature	37-58	Enter component nomenclature (see note).
Container Number Low	59-62	Enter recorded container number. If more than one container is required for component, enter the lowest number.
Container Number High	63-66	Enter recorded container number when more than one container is required for the component.
Routing Identifier Code From	67-69	Enter the RIC of the generating activity.
Build Directive Number	70-73	Enter the applicable build directive number.
Action Code	74	Enter: D for deletion. A for additions. C for changes. N for new transactions.
Function/Group Code	75	Enter applicable Function/Group Code.
Subfunction Code	76-77	Enter applicable subfunction code.
Sort Sequence Number	78-80	Enter applicable sort sequence number.

b. Card Sequence 2.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2D. Will be Z2D for local entry.
Routing Identifier Code To	4-6	Enter RIC of the activity designated to receive the transaction.
Card Sequence Number	7	Enter 2.
Component Stock Number	8-22	Enter the component stock number.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Unit of Measure	23-24	Enter the applicable unit of measure if required to further define the unit of issue (see note).
Measurement Quantity	25-29	Enter the number of units of measure required (see note).
Quantity Authorized Short	30-38	Enter the authorized shortage when applicable. Field represents 7 whole numbers and two decimals (see note).
Function/Group Code	39	Enter applicable Function/Group Code.
Subfunction Code	40-41	Enter applicable Subfunction Code.
Blank	42	Leave blank.
Unit of Issue	43-44	Enter component unit of issue.
Unit of Issue Weight	45-51	Enter component unit of issue weight. Field represents 5 whole numbers and 2 decimal places.
Unit of Issue Cube	52-58	Enter component unit of issue cube. Field represents 4 whole numbers and 3 decimal places.
Inspection Required Indicator	59	Enter recorded indicator.
Water Commodity Code	60-64	Enter recorded code.
Shelf-Life Code (Potency)	65	Enter recorded code.
Physical Security Code	66	Enter recorded code.
Special Requirements Code	67	Enter recorded code.
Hazardous Storage Compatibility Code	68-69	Enter recorded code.
Build Directive Number	70-73	Enter the applicable build directive number.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Action Code	74	Enter: A for additions. C for changes. N for new transactions. D for deletions.
Air Commodity Code	75-76	Enter recorded code.
Blank	77	Leave blank.
Sort Sequence Number	78-80	Enter applicable sort sequence number.

c. Card Sequence 3.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2D. Will be Z2D for local entry.
Routing Identifier Code To	4-6	Enter RIC of the activity designated to receive the transaction.
Card Sequence Number	7	Enter 3.
Stock Number	8-22	Enter the component stock number.
Original Stock Number	23-37	Enter original stock number for which component is a substitute.
Function/Group Code	38	Enter applicable Function/Group Code.
Subfunction Code	39-40	Enter applicable Subfunction Code.
Position Alignment Code	41-44	Code will indicate location of component within the container where applicable (see note).
Blank	45-69	Leave blank.
Build Directive Number	70-73	Enter the applicable build directive number.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Action Code	74	Enter: A for additions. C for changes. N for new transactions. D for deletions.
Blank	77	Leave blank.
Sort Sequence Number	78-80	Enter applicable sort sequence number.

d. Card Sequence 4.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2D. Will be Z2D for local entry.
Routing Identifier Code To	4-6	Enter RIC of the activity designated to receive the transaction.
Card Sequence Number	7	Enter 4.
Stock Number	8-22	Enter the applicable component stock number.
Unit of Issue (Old)	23-24	Enter the old unit of issue.
Unit of Issue (New)	25-26	Enter the new unit of issue. May be same as UI (new) if stock number change.
Conversion Factor	27-31	The factor by which the old quantity must be multiplied to convert to new UI. Must be 1 if UI old and new are the same.
	(27)	Enter the decimal locator as follows: 0 - To indicate a whole number (no decimal). 1 - To indicate a decimal before pos. 31.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
		2 - To indicate a decimal before pos. 30. 3 - To indicate a decimal before pos. 29. 4 - To indicate a decimal before pos. 28.
	(28-31)	Enter the multiplication factor to be used in conjunction with pos. 27.
New Stock Number	32-46	Enter the new stock number for a stock number change.
Blank	47-66	Leave blank.
Routing Identifier Code From	67-69	Enter the RIC of the generating activity.
Blank	70-80	Leave blank.

NOTE: This element is eligible for change in the assembly activity system when the Action Code is C. Specific validation, when required, is provided in the validation portion of this appendix.

4. VALIDATION

Violations will appear on the appendix F-85 Report for correction by the assembly activity.

a. Card Sequence 1.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2D or Z2D.	AA
4-6	Alpha/numeric, must be filled.	AC
7	Must be 1.	RA
8-22	Alpha/numeric must contain at least 6 characters. No blanks in pos. 8-13.	AY
23-29	Numeric, not all zeros if Action Code is A, C or N. No validation if Action Code is D.	AS

FIELD POSITIONS	VALIDATION	VIOLATION CODE
30-36	Numeric, may be all zeros. No validation if Action Code is D.	AS
59-62	Numeric, may be blank.	RU
63-66	Numeric, may be blank.	RU
67-69	Alpha/numeric must be in the table and control file.	AB
70-73	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
74	Must be A, C, D or N. Must be filled.	CF
75	Alpha, may be blank.	RM
76-77	Alpha/numeric, may be blank.	RN
78-80	Numeric, may not be blank.	X2

b. Card Sequence 2.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2D or Z2D.	AA
4-6	Alpha/numeric, must be filled.	AC
7	Must be 2.	RA
8-22	Alpha/numeric. Must contain at least 6 characters. No blanks in pos. 8-13.	AY
23-24	Alpha, may be blank.	AN
25-29	Numeric, may be blank.	RQ
30-38	Numeric, not all zeros. May be blank.	AS
39	Alpha, may be blank.	RM
40-41	Alpha/numeric, may be blank.	RN
43-44	Alpha, must be filled, unless Action Code is D. If so do not validate.	AN

FIELD POSITIONS	VALIDATION	VIOLATION CODE
45-51	Numeric, may be blank.	RR
52-58	Numeric, may be blank.	RS
59	Must be Y or blank.	RP
60-64	Alpha/numeric, may be blank.	IC
65	Alpha/numeric, may be blank.	HB
66	Alpha, may be blank.	MW
67	Alpha/numeric, may be blank.	LS
68-69	Alpha/numeric, may be blank.	IS
70-73	Alpha/numeric. First position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
74	Must be A, C, D or N. Must be filled.	CF
75-76	Alpha/numeric, may be blank.	ID
78-80	Numeric, may not be blank.	X2

c. Card Sequence 3.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2D or Z2D.	AA
4-6	Alpha/numeric, must be filled.	AC
7	Must be 3.	RA
8-22	Alpha/numeric. Must contain at least 6 characters. No blanks in pos. 8-13.	AY
23-37	Alpha/numeric, must contain at least 6 characters. May be blank.	AY
38	Alpha, may be blank.	RM
39-40	Alpha/numeric, may be blank.	RN
41-44	Alpha/numeric, may be blank.	RT

FIELD POSITIONS	VALIDATION	VIOLATION CODE
70-73	Alpha/numeric. Filled, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
74	Must be A, C, D or N. Must be filled.	CF
78-80	Numeric, may not be blank.	X2

d. Card Sequence 4.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2D or Z2D	AA
4-6	Alpha/numeric, must be filled.	AC
7	Must be 4.	RA
8-22	Alpha/numeric. Must contain at least 6 characters. No blanks in pos. 8-13.	AY
23-24	Alpha, must be filled.	AN
25-26	Alpha, must be filled, may be same as pos. 22-24 if stock no. change.	AN
27	Must be numeric, 0, 1, 2, 3 or 4.	MX
28-31	Numeric other than all zeros.	VU
32-46	Alpha/numeric or blank. Mandatory if (old) and (new) UI are the same. When present must contain at least 6 characters. No blanks in pos. 32-37.	AY

APPENDIX B-304

UNIT ASSEMBLY CONTAINER DATA

1. PURPOSE

This record format, along with formats B-300, B-301, B-302 and B-303, is used by the assembly manager to provide unit assembly data to the assembly activity. These formats will be used by the assembly activity to make corrections, provide missing data and will also be used to transmit local changes and history data to the assembly manager. One B-304 transaction will be provided for each container within build directive.

2. REFERENCE

None

3. DATA ELEMENTS

The following are the fields in the card format:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier	1-3	Enter C2E. Will be Z2E for local entry.
Routing Identifier Code To	4-6	Enter the RIC of the activity designated to receive the transaction.
Container Number	7-10	Enter the recorded container number.
Type Package Code	11-12	Enter the recorded type package code for the container.
Container Description	13-32	Enter the recorded container description.
Pallet Number	33-36	Enter the recorded pallet number.
Container Label Data	37-66	Enter recorded container label data.
Routing Identifier Code From	67-69	Enter the RIC of the generating activity.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Build Directive Number	70-73	Enter the applicable build directive number.
Action Code	74	Enter: N for new transactions. C for transmission of data updates to the assembly manager.
Shipping Document Sequence Number	75-76	Enter recorded shipping document sequence number.
Blank	77-80	Leave blank.

4. VALIDATION

Violations will appear on the appendix F-85 Report for correction by the assembly activity.

FIELD POSITIONS	VALIDATION	VIOLATION CARD
1-3	Must be C2E or Z2E.	AA
4-6	Alpha/numeric, must be filled.	AC
7-10	Numeric	RU
11-12	Alpha/numeric, may be blank.	XD
33-36	Alpha/numeric, may be blank	RV
67-69	Alpha/numeric, must be in the table and control file.	AB
70-73	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
74	Must be N.	CF
75-76	Numeric, may be blank.	RW

APPENDIX B-305

ADVANCE DATA FOR ASSEMBLY

1. PURPOSE

The advance assembly data is originated by the assembly manager and transmitted to the assembly activity when the decision has been made to start assembling a build directive. This data provides notification that materiel is due in to the assembly activity and will also be used in the preparation of the Assembly Component Receipt Confirmation.

2. REFERENCE

None

3. DATA ELEMENTS

The following are the fields in the card format:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2G/Z2G for procurement or C2H/Z2H for other.
Routing Identifier Code To	4-6	Enter RIC of the activity designated to receive the transaction.
Quantity Reversal Indicator	7	Enter Y to reverse advance receipt quantity.
Component Stock Number	8-22	Enter the component stock or part number of materiel to be received.
Unit of Issue	23-24	Enter the UI abbreviation of the item to be received.
Quantity	25-29	Enter the quantity of the item to be received preceding significant digits with zeros.
Document Number	30-43	Enter component document number constructed in accordance with appendix C-2.
Suffix Code	44	Enter Suffix Code when applicable.
Supplementary Activity Address Code	45-50	Enter the AAC of the assembly activity.
Blank	51-52	Leave blank.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Build Directive Number	53-56	Enter the applicable build directive number.
Function/Group Code	57	Enter applicable Function/Group Code.
Subfunction Code	58-59	Enter applicable Subfunction Code.
Blank	60-63	Leave blank.
Sort Sequence Number	64-66	Enter applicable sort sequence number.
Routing Identifier Code From	67-69	Enter the RIC of the generating activity.
Blank	70	Leave blank.
Condition Code	71	Enter Condition Code of item to be received.
Estimated Delivery Date	72-76	Enter estimated year and Julian day for delivery of materiel.
Blank	77	Leave blank.
Routing Identifier Code of Shipping Activity	78-80	Enter the RIC of the activity from which the materiel will be shipped.

4. VALIDATION

Violations will appear on the appendix F-85 Report for correction by the assembly activity.

FIELD POSITIONS	VALIDATION	VIOLATION CODE
1-3	Must be C2G/Z2G or C2H/Z2H.	AA
4-6	Alpha/numeric.	AC
7	Y or blank.	XR
8-22	Alpha/numeric, must contain at least 6 characters. No blanks in positions 8-13.	AY
23-24	Alpha, must be filled.	AN
25-29	Numeric other than all zeros.	AS

FIELD POSITIONS	VALIDATION	VIOLATION CODE
30-43	Position 1-6 alpha/numeric, positions 7-10 numeric, positions 11-14 alpha/numeric, must not have blanks or all zeros.	AI
44	Alpha, may be blank.	AI
45-50	Alpha/numeric, must be filled.	BJ
53-56	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.	RD
57	Alpha, may be blank.	RM
58-59	Alpha/numeric, may be blank.	RN
64-66	Numeric, may not be blank.	X2
67-69	Alpha/numeric must be in the table and control file.	AB
71	Alpha, A, B, C, D, E, F or G.	AF
72-76	Numeric, mandatory for C2G/Z2G. May be blank for C2H/Z2H.	HP
78-80	Alpha/numeric, mandatory for C2H/Z2H. May be blank for C2G/Z2G.	RX

APPENDIX B-306

ASSEMBLY COMPONENT RECEIPT CONFIRMATION

1. PURPOSE

This record format is prepared the assembly activity and is transceived to the assembly manager to report receipt of materiel.

2. REFERENCE

None

3. DATA ELEMENTS

The following are the fields in the card format:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2J for procurement or C2K for other.
Routing Identifier Code To	4-6	Enter the RIC of the supply center directing the assembly.
Quantity Reversal Indicator	7	Enter Y to reverse receipt quantity.
Component Stock Number	8-22	Enter the component stock or part number of materiel received.
Unit of Issue	23-24	Enter the UI abbreviation of the item received.
Quantity	25-29	Enter quantity received, preceding significant digits with zeros.
Component Document Number	30-43	Enter the applicable component document number.
Suffix Code	44	Alpha, may be blank.
Supplementary Activity Address Code	45-50	Enter the AAC of the assembly activity from PMR data.
Blank	51-52	Leave blank.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Build Directive Number	53-56	Enter the applicable build directive number from PMR data.
Function/Group Code	57	Enter applicable Function/Group Code.
Subfunction Code	58-59	Enter applicable Subfunction Code from PMR data.
Blank	60-66	Leave blank.
Routing Identifier Code From	67-69	Enter RIC of the assembly activity at which item is received.
Blank	70	Leave blank.
Condition Code	71	Enter Condition Code of item.
Blank	72	Leave blank.
Date of Receipt	73-75	Enter Julian day materiel is received at the assembly area.
Blank	76-77	Leave blank.
Sort Sequence Number	78-80	Enter applicable sort sequence number.

4. VALIDATION

Computer prepared output transaction.

APPENDIX B-307

COMPONENT LOCATION UPDATE

1. PURPOSE

This CRT input will be used to establish an assembly storage location for component stock which was not directed to a previously established location or to an assembly line.

2. REFERENCE

Appendix E-277 P, part F.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UA.
Process Indicator	1	A	Enter I for Inquiry or U for Update. May leave blank to clear displayed data.
Component Stock Number*	15	A/N	Enter the assigned component stock number.
Storage Location	9	A/N	Enter location code when applicable.
Storage Location New	9	A/N	Enter location code when applicable.
Action Code*	1	A	a. Enter A to add "Storage Location New" and/or expiration date, date of manufacture data to the assembly locator for the component stock number. Enter D to delete "Storage Location" from the assembly locator. b. Enter C to delete "Storage Location" and add "Storage Location New" and/or associated expiration date and date of manufacture data.
Date of Pack	4	N	Enter applicable date of pack. Two digit month and two digit year.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Expiration Date	4	N	Enter two digit numeric month and two digit numeric year on shelf-life items.
Stock Quantity	10	N	Enter up to a seven digit whole number, a decimal point and two decimal digits to update stock quantity. Fill the field with 9's to zero the stock quantity.
Residual Quantity	8	N	Enter up to a five digit whole number, a decimal point, and two decimal digits to update residual quantity. Fill the field with 9's to zero the residual quantity.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Process Section Code	Must be UA.
Process Indicator	Must be I, U or blank.
Component Stock Number	Alpha/numeric. Must contain at least 6 characters. No blanks in positions 1-6.
Storage Location Code	Must be present when Action Code is C or D.
Storage Location Code New	Must be present when Action Code is A or C.
Action Code	Must be A, C or D for location updates.
Date of Manufacture	Numeric, may be blank.
Expiration Date	Numeric, may be blank.
Stock Quantity	Numeric, may be blank.
Residual Quantity	Numeric, may be blank.

APPENDIX B-308

COMPONENT PICKING/PACKING REQUEST

1. PURPOSE

This CRT input will be used by the assembly activity to request Component Pick/Movements Documents (appendix F-328) for materiel to be assembled. It will also provide for the output of the Assemblage Control Packing Data (appendix F-329) and the assignment of assembly lines for materiel to be picked based on container(s), function, assemblage identification number or build directive number included in the request. Assembly activities may use the location sequence option to obtain picking lists with locations sequenced for picking by individual container or sequenced to obtain all components on the Component Picking/Packing Release with one pass through the assembly storage area.

2. REFERENCE

Appendix E-277 P, part P.

3. The following data elements are entered via CRT.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RA.
Build Directive Number*	4	A/N	Enter applicable build directive number.
Assembly Area*	5	A/N	Enter number of assigned assembly area.
Assemblage Identification No.	2	N	For major assemblages enter specific AIN or ZZ if for all AINs.
Location Sequence Option*	1	A	a. Enter A if a separate location sequence is desired for each container. b. Enter B if one location sequence is desired for the total picking/packing request. Do not merge into location sequence with other option B inputs.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
			c. Enter C, same as option B, but merge into location sequence with other option B inputs processed in the same batch.
Total Number of Assemblages	5	N	Enter number of minor assemblages for which components are to be picked.
Container Number Low	4	N	Enter low container number when a sequence of containers is required.
Container Number High	4	N	Enter high container number in conjunction with low to define containers included in sequence.
Function/Group Code	1	A	Enter Function/Group Code.
Container Number	4	N	Enter container numbers, up to forty.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be RA.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Assembly Area	Alpha/numeric.
Assemblage Identification Number	Must be 01-20 or ZZ, if build directive is for a major assemblage; otherwise, leave blank.
Location Sequence Option	Alpha, must be A, B or C.
Total Number of Assemblages	Must be numeric if build directive is for minor assemblages; otherwise, leave blank.

FIELD LEGEND	VALIDATION
Container Number Low	Numeric or blank. Must be blank when Function/Group Code is entered. Must have entry when container number high has entry.
Container Number High	Numeric or blank. Must be blank when container number low field is blank or when Function/Group Code is entered.
Function/Group Code	Alpha or blank. Must be blank if container numbers are included in entry.
Container Number	Numeric, up to 40 entries or blank. Must be blank when Function/Group Code is entered.

APPENDIX B-309

PACKING COMPLETION DATA

1. PURPOSE

This CRT input will indicate to the system that the quantity entered for a component control number has been packed. Entry of exception packing data will also be accomplished in this process.

2. REFERENCE

Appendix E-277 P, part G.

3. The following data elements are entered via CRT:

a. Packing completion data:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UB.
Process Indicator	1	A	Enter I for Inquiry, C for Change, U for Update or leave blank to clear displayed data.
Build Directive Number*	4	A/N	Enter applicable build directive number.
Assemblage Identification Number*	2	A/N	For major assemblies, enter applicable assemblage identification number, or ZZ if update applies to all assemblages.
Total Number of Assemblages	5	N	Enter number of minor assemblages for which component is packed.
Component Control Number*	5	N	Enter component control number of packed item.
Unit of Measure	2	A	Enter the unit of measure which describes the quantity packed.
Quantity Packed	9	N	Enter the quantity packed. May enter decimal in field to represent 7 whole numbers and 2 decimal places. If minor assembly enter the basic monthly.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Container Number Low*	4	N	Enter container number in which component is packed.
Container Number High	4	N	Enter container number high when CCN is packed in a range of container.
Range Override	1	A	Enter Y to override the check for reasonableness of the container range.
Container Override	1	A	Enter Y to pack in different container than originally planned.
Date of Manufacture	4	N	Enter component date of manufacture. Two position month and two position year.
Expiration Date	4	N	Enter component date of expiration date. Two position month and two position year.
Lot Number	12	A/N	Enter applicable lot number.
Manufacturer	14	A	Enter name of component manufacturer.
Contract Number	13	A/N	Enter applicable contract number.
Serial Number	15	A/N	Enter applicable serial number.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UB.
Process Indicator	Must be I, C, U or blank.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.

FIELD LEGEND	VALIDATION
Assembly Identification Number or (Total Number of Assemblages)	AIN and total number of assemblages are entered in the same CRT field. If BDN is "8---", first two positions must be 01-20 or ZZ. If BDN is "7---", and a quantity packed is entered, must enter up to 5 numeric position; otherwise, may be blank.
Component Control Number	Numeric
Unit of Measure	Alpha, mandatory if quantity packed is entered.
Quantity Packed	Numeric or blank. If BDN begins with 7, quantity entered must equal the basic quantity.
Container Number Low	Numeric.
Container Number High	Numeric or blank.
Range Override	Y or blank.
Container Override	Y or blank. Used with Process Indicator U only.
Date of Manufacture	Numeric, may be blank.
Expiration Date	Numeric, may be blank.

APPENDIX B-310

CONTAINER PACKING LIST REQUEST

1. PURPOSE

This CRT input will provide for the output of the Container Packing List (appendix F-331) with the component stock number data for each item in the container.

2. REFERENCE

Appendix E-277 P, part H.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UD.
Build Directive Number*	4	A/N	Enter applicable build directive number.
Assemblage Identification Number	2	A/N	For major assemblages, enter the applicable assemblage identification number.
Container Number Low*	4	N	Enter the applicable container number.
Container Number High	4	N	Enter range when one component is packed in multiple containers. Packing list will be provided for each container in range.
Type Package Code*	2	A/N	Enter applicable Type Package Code.
Container Weight*	7	N	Enter total container weight including material handling aids.
Container Cube*	7	N	Enter container cube. Field represents 6 whole numbers and one decimal place.
Weight of Pallet	7	N	Enter the weight of any material handling aid, such as pallet, which is authorized for exclusion from transportation billing.

*Mandatory enteries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UD.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Assemblage Identification Number	Numeric 01-20 if first position of BDN is 8. May be blank if first position of BDN is 7.
Container Number Low	Numeric.
Container Number High	Numeric, may be blank.
Type Package Code	Alpha/numeric.
Container Weight	Numeric.
Container Cube	Numeric.
Weight of Pallet	Numeric or blank. Mandatory when Type Package Code of PT or SD is entered.
Close IND.	Alpha (must be Y or blank).

APPENDIX B-311

CONTAINER LOCATION DATA

1. PURPOSE

To provide for the CRT input of storage locations for completed containers which must be stored until the remainder of the assembly is ready for shipment.

2. REFERENCE

Appendix E-277 P, part I.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UE.
Build Directive Number*	4	A/N	Enter BDN of component being located.
Assemblage Identification No.*	2	A/N	Enter applicable assemblage identification number.
Pallet Number	3	A/N	Enter up to 3 numerics, system assigns P in the first position.
Container Number Low	4	N	Enter applicable container number.
Container Number High	4	N	Enter container number when a sequence of containers is placed in the same location.
Storage Location	9	A/N	Enter applicable Storage Location Code.
Storage Location New	9	A/N	Enter Storage Location Code when applicable.
Action Code*	1	A	a. Enter A to add the "Storage Location New" to the assembly locator.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
			b. Enter D to delete the "Storage Location" from the assembly locator.
			c. Enter C to delete "Storage Location" and add "Storage Location New".

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UE.
Build Directive Number	Alpha/numeric, first position must be 8.
Assemblage Identification Number	Numeric 01-20.
Pallet Number	Numeric, must have entry if container number low is blank.
Container Number Low	Numeric, must have entry if pallet number is blank.
Container Number High	Numeric, may be blank.
Storage Location	Must have entry when Action Code is C or D.
Storage Location New	Must have entry when Action Code is A or C.
Action Code	Must be A, C or D.

APPENDIX B-312

ASSEMBLY PACKING LIST NARRATIVE

1. PURPOSE

This input provides for the CRT entry, update and display of descriptive narrative data which is required on the Assembly Packing List.

2. REFERENCE

Appendix E-277 P, part J.

3. DATA ELEMENTS

a. The following data element is entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UF.
Process Indicator	1	A	Enter I for Inquiry, U for Update or leave blank to clear displayed data.
Build Directive Number	4	A/N	Enter applicable BDN.

b. The following field is displayed for input or update:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Narrative	1320	A/N	Enter or update narrative applicable to BDN.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UF.
Process Indicator	Must be I, U or blank.
Build Directive Number	Alpha/numeric. First position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.

*Mandatory entries.

APPENDIX B-313

REPRINT REQUEST

1. PURPOSE

This CRT entry will provide for the reprint of the F-326 (Receipt Movement Document - Assembly Area) and the F-334 (Receipt Movement Document - Location) which were originally generated in the receipt process. The duplicate documents will be identified by a ***REPRINT*** message printed on the document.

2. REFERENCE

Appendix E-277 P, part Q.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RB.
Component Document No*	14	A/N	Enter the document number from the receipt document.
Suffix Code	1	A	Enter when applicable.

*Mandatory entries.

4. VALIDATION

None performed.

APPENDIX B-314

CONTAINER PALLETIZATION ENTRY

1. PURPOSE

This CRT input provides for the assignment of containers to a pallet and the input of associated pallet data. Previously entered data may be called up for review and necessary changes, deletions and additions can be made.

2. REFERENCE

Appendix E-277 P, part K.

3. DATA ELEMENTS

a. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UG.
Process Indicator	1	N	Enter I for Inquiry, U for Update, N to blank container fields or blank to clear all displayed data.
Build Directive Number*	4	A/N	Enter applicable BDN.
Assemblage Identification No.	2	A/N	Enter applicable assemblage identification number or ZZ if applicable to all assemblages.
Pallet Number*	3	A/N	Enter up to 3 numerics, system assigns P in first position.

b. The following data elements are displayed for review, additions or deletions:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Container Number Low	4	N	Enter container number low when a sequence of containers is required.
Container Number High	4	N	Enter container number high with low to define containers in the sequence.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Shipping Document Sequence Number	2	N	Enter applicable shipping document sequence number.
Weight of the Pallet	7	N	Enter weight of empty pallet.
Gross Pallet Weight	7	N	Enter weight of loaded pallet.
Gross Pallet Cube	7	N	Enter cube of loaded pallet. Field represents 6 whole numbers and one decimal.
Type Package Code	2	A/N	Enter applicable Type Package Code.
Pallet Description	20	A/N	Enter applicable description.
Pallet Location	9	A/N	For review only.
Container Numbers	4	N	Enter container numbers on the loaded pallet.
Action Code	1	A	Enter A for add or D for delete. Applies only to container number entries; otherwise, leave blank.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UG.
Process Indicator	Must be I, U, N or blank.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Assemblage Identification Number	Alpha/numeric 01-20 or ZZ. Manadatory if BDN is "8---", (major), may be blank if BDN is "7---", (minor).
Pallet Number	Numeric.
Container Number Low	Numeric, may be blank.

FIELD LEGEND	VALIDATION
Container Number High	Numeric, may be blank.
Shipping Document Sequence Number	Numeric, may be blank.
Weight of the Pallet	Numeric, may be blank. Mandatory when Type Package Code is PT or SD.
Gross Pallet Weight	Numeric, may be blank. Must be entered prior to entering the assembly completion notice.
Gross Pallet Cube	Numeric, may be blank. Must be entered prior to entering the assembly completion notice.
Type Package Code	Alpha/numeric, may be blank.
Container Number	Numeric, may be blank.
Action Code	May be A, D or blank.

APPENDIX B-315

STOCK NUMBER/RECEIPT DOCUMENT NUMBER INQUIRY

1. PURPOSE

This CRT input will generate a display of the receipt document numbers for the stock number entered.

2. REFERENCE

Appendix E-277 P, part D.

3. DATA ELEMENTS

a. The following data element is entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter IC.
Stock Number*	15	A/N	Enter stock number of materiel received.

*Mandatory entries.

b. The following data elements will be displayed on the CRT screen for review:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Document Number	14	A/N	For review only.
Suffix Code	1	A	For review only.
Build Directive No.	4	A/N	For review only.

APPENDIX B-316

ASSEMBLY COMPONENT SHORTAGE REQUEST

1. PURPOSE

This CRT input provides for the output of the Assembly Component Shortage Report (appendix F-335) fo the input parameters.

2. REFERENCES

a. Appendix E-277 P, part R.

b. Appendix F-335.

3. The following fields of data are to be input through the remote terminal.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RC.
Build Directive Number*	4	A/N	Enter build directive number for which report is desired.
Function/Group Code	1	A	Enter Function Code for which report is required.
Container Number Low	4	N	Enter applicable container number.
Container Number High	4	N	Enter high container number in conjunction with low to define containers included in the sequence.
Assemblage Build Capability	2	N	Enter number of assemblages for which shortage information is desired.
Requester Identification	4	A/N	Enter applicable requester identification.

*Mandatory entries.

NOTE: If no entry is made in assemblage build capability field, the shortage report will be processed for the total number of sets in the build directive.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be RC.
Build Directive Number	Alpha/numeric, first position must be 8.
Function/Group Code	Alpha or blank. Must be blank if container numbers are included in entry.
Container Number Low	Numeric or blank. Must be blank when Function/Group Code is entered. Must have entry when container number high has entry.
Container Number High	Numeric or blank. Must be blank when container number low field is blank or when Function/Group Code is entered.
Assemblage Build Capability	Numeric or blank.
Requester Identification	Alpha/numeric, may be blank.

APPENDIX B-317

COMPONENT PLANNING/UPDATE DATA

1. PURPOSE

To provide the assembly activity to review the recorded data for a specific component within a build directive. The operator will have the capability to make changes or corrections and to add planning data and assign component control numbers to containers.

2. REFERENCE

Appendix E-277 P, part L.

3. DATA ELEMENTS

a. The following are fields for CRT input to assign component control numbers to a container or to display item data associated with the component control number.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UH.
Process Indicator	1	A	Enter I for Inquiry, U for Update or blank to clear displayed data.
Build Directive Number*	4	A/N	Enter the BDN to which the component is assigned.
Assemblage Identification No.	2	A/N	Enter specific AIN or leave blank for Inquiry. For update, enter applicable AIN or ZZ if applicable to all assemblages.
Component Control Number Low*	5	N	Enter the number of the applicable component.
Component Control Number High	5	N	Enter component control number high when input data applies to all components in the low to high range. Cannot be entered in conjunction with container number high.
Container Number Low	4	N	Enter the applicable container number.

Mandatory entries

b. The following data elements are displayed:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Container Number High	4	N	Enter when more than one container number is required for component control number. Cannot be entered in conjunction with component control number high.
Range Check Override	1	A	Enter a Y to override the check for reasonableness of container range.
Component Control Number	5	N	For review only.
Component Stock Number	15	A/N	For review only.
Nomenclature	22	A	May enter or change name of assembly component.
Unit of Issue	2	A	For review only.
Basic Quantity	7	N	For review only.
Unit of Measure	2	A	May change or enter correct unit of measure.
Measurement Quantity	5	N	May change or enter correct measurement quantity.
Container Number Low	4	N	For review only.
Container Number High	4	N	For review only.
Inspection Required Indicator	1	A	Enter Y, if inspection is required or R to remove requirement.
Shelf-Life Code	1	A/N	May change or enter correct (Potency) code.
Physical Security Code	1	A	May change or enter correct code.
Special Requirements Code	1	A/N	May change or enter correct code.
Hazardous Storage Compatibility Code	2	A/N	May change or enter correct code.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Water Commodity Code	5	A/N	May change or enter any position of code.
Air Commodity Code	2	A/N	May change or enter correct code.
Unit of Issue Weight	7	N	May change or enter correct unit of issue weight. Field represents 5 whole numbers and 2 decimal places.
Unit of Issue Cube	7	N	May change or enter correct unit of issue cube. Field represents 4 whole numbers and 3 decimal places.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UH.
Process Indicator	Must be I, U or blank.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Assemblage Identification Number	Alpha/numeric, 01-20 or ZZ for Update. 01-20 for Inquiry. Mandatory if BDN is "8---" (major), may be blank if BDN is "7---" (minor).
Component Control Number Low	Numeric.
Component Control Number High	Numeric, may be blank.
Container Number Low	Numeric, may be blank.
Container Number High	Numeric, may be blank.
Nomenclature	Alpha, may be blank.
Basic Quantity	Numeric, may be blank.
Unit of Measure	Alpha, may be blank.
Measurement Quantity	Numeric, may be blank.

FIELD LEGEND	VALIDATION
Quantity Authorized Short	Numeric, may be blank.
Container Number High	Numeric, may be blank.
Container Number Low	Numeric, may be blank.
Inspection Required Indicator	Must be Y or R, may be blank.
Shelf-Life Code (Potency)	Alpha/numeric, may be blank.
Physical Security Code	Alpha, may be blank.
Special Requirements Code	Alpha/numeric, may be blank.
Hazardous Storage Compatibility Code	Alpha/numeric, may be blank.
Water Commodity Code	Alpha/numeric, may be blank.
Air Commodity Code	Alpha/numeric, may be blank.
Unit of Issue Weight	Numeric, may be blank.
Unit of Issue Cube	Numeric, may be blank.

APPENDIX B-318

COMPONENT PACKING CONFIRMATION

1. PURPOSE

This record format is used to notify the assembly manager that packing has been completed at the assembly activity for the designated component within the specified parameters.

2. REFERENCE

None

3. DATA ELEMENTS

The following fields are in the card format:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Document Identifier Code	1-3	Enter C2F.
Routing Identifier Code To	4-6	Enter the RIC of the supply center controlling the assembly.
Quantity Reversal Indicator	7	Enter Y to reverse quantity packed.
Stock Number	8-22	Enter component stock or part number of materiel packed.
Unit of Issue	23-24	Enter UI abbreviation of the materiel packed.
Quantity Packed	25-31	Enter quantity packed.
Build Directive Number	32-35	Enter applicable build directive number.
Assemblage Identification Number	36-37	Enter applicable assemblage identification number.
Total Number of Assemblages	38-42	Enter number of assemblages for which component is packed.
Blank	43	Leave blank.
Function/Group Code	44	Enter applicable Function/Group Code.
Subfunction Code	45-46	Enter applicable Subfunction Code.

FIELD LEGEND	FIELD POSITIONS	EXPLANATION/INSTRUCTIONS
Container Number Low	47-50	Enter applicable container number.
Container Number High	51-54	Enter highest container when more than one container was required to pack stock number.
Original Stock Number	55-69	Enter original stock number when applicable.
Routing Identifier Code From	70-72	Enter the RIC of the assembly activity which packed the materiel.
Blank	73-77	Leave blank.
Sort Sequence Number	78-80	Enter applicable sort sequence number.

4. VALIDATION

Computer prepared output transaction.

APPENDIX B-319

UNIT ASSEMBLY PLANNING LIST REQUEST

1. PURPOSE

This CRT input provides for the output of the Unit Assembly Planning Data (appendix F-324) listing for the input parameters.

2. REFERENCE

Appendix E-277 P, part S.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RD.
Build Directive Number*	4	A/N	Enter the applicable build directive number.
Function/Group Code	1	A	Enter the applicable Function/Group Code.
Container Number Low	4	N	Enter the applicable container number.
Container Number High	4	N	Enter high container number in conjunction with low to define containers included in sequence.
Requester Identification	4	A/N	Enter applicable requester identification.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be RD.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.

FIELD LEGEND	VALIDATION
Function/Group Code	Alpha or blank. Must be blank if container numbers are included in entry.
Container Number Low	Numeric or blank. Must be blank when Function/Group Code is entered. Must have entry when container number high has entry.
Container Number High	Numeric or blank. Must be blank when container number low field is blank or when Function/Group Code is entered.
Requester Identification	Alpha/numeric, may be blank.

APPENDIX B-320

ASSEMBLY RECEIPT DATA

1. PURPOSE

This CRT entry will provide for the display of the advance receipt data for the corresponding document number. Necessary data can be entered to process a receipt when advance receipt data was not received. Entry of a received quantity will initiate the output of the component receipt confirmation to the assembly manager and the assembly receipt movement document for routing of materiel to the appropriate assembly lines or storage locations.

2. REFERENCE

Appendix E-277 P, part M.

3. DATA ELEMENTS

a. The following are fields for input:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UI.
Component Document Number*	14	A/N	Enter the document number from the receipt document.
Suffix Code	1	A	Enter when applicable.

*Mandatory entries.

b. The following elements are displayed:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Component Stock Number	15	A/N	For review, enter if not displayed from advanced receipt data.
Unit of Issue	2	A	For review, enter if not displayed from advance receipt data.
Due In Quantity	5	N	For review, blank if advance receipt data is not available.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Condition Code	1	A	For review, may be changed or enter if not displayed from advance receipt data.
Unit of Measure	2	A	Field will be displayed only when entry is necessary to process receipt or advance receipt data is not available.
Measurement Quantity	5	N	Field will be displayed only when entry is necessary to process receipt or advance receipt data is not available.
Received Quantity	5	N	Required entry to initiate component receipt confirmation.
Quantity Reject Override	1	A	Enter Y to force system to accept more than due in quantity.
Build Directive Number	4	A/N	Enter if advance receipt data was not displayed.
Function	1	A	Enter if advance receipt data was not displayed.
Subfunction	2	A/N	Enter if advance receipt data was not displayed.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UI.
Suffix Code	Alpha, may be blank.
Component Stock Number	Alpha/numeric. Must contain at least 6 positions. No blanks in first 6 positions.
Unit of Issue	Alpha, must be filled.
Condition Code	Alpha, A, B, C, D, E, F or G.
Unit of Measure	Alpha, may be blank.

FIELD LEGEND	VALIDATION
Measurement Quantity	Numeric, may be blank.
Received Quantity	Numeric, may be blank.
Quantity Reject Override	Y or blank.

APPENDIX B-321

ASSEMBLAGE COMPLETION NOTIFICATION

1. PURPOSE

This CRT input will indicate that a specific assemblage has been packed and is ready for shipment. This entry will initiate the sending of the receipt confirmation to the assembly manager for a major assembly and the output of the assembly packing list for both major and minor assemblies.

2. REFERENCE

Appendix E-277 P, part T.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RE.
Build Directive Number*	4	A/N	Enter BDN of completed assemblage.
Assemblage Identification No.	2	A/N	For major assemblies, enter identification number of the completed assemblage.
Total Number of Assemblages	5	N	Enter the number of minor assemblages completed.
Major Assembly Reprint/Completion Indicator	1	A	Enter a Y to obtain a reprint of a previously generated assembly packing list without sending a receipt confirmation. Enter a Z to direct that the assemblage be completed by considering any required quantity not packed as authorized short.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be RE.

FIELD LEGEND	VALIDATION
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Assemblage Identification Number or (Total Number of Assemblages)	AIN and number of assemblages are entered in the same field. If first position of BDN is 8, must be 01-20 in first two positions. If first position of BDN is 7, must enter up to 5 numerics.
Major Assembly Reprint/Completion Indicator	May be Y, Z or blank.

APPENDIX B-322

BUILD DIRECTIVE DELETION NOTICE

1. PURPOSE

This CRT input will indicate a build directive number has been completed and will result in the output of the build directive transaction history report (appendix 336) and the associated records will be deleted.

2. REFERENCE

Appendix E-277 P, part U.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RF.
Build Directive Number*	4	A	Enter the BDN of completed assemblage.
Mandatory Deletion Indicator	1	A	Enter Y to override completion checks.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Enter RF.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Mandatory Deletion Indicator	Must be Y or blank.

APPENDIX B-323

END ITEM AND ASSEMBLAGE DATA INQUIRY

1. PURPOSE

This CRT input will generate a display of the end item data and the associated assemblages for a build directive number.

2. REFERENCE

Appendix E-277 P, part N.

3. DATA ELEMENTS

a. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UJ.
Process Indicator	1	A	Enter I for Inquiry, U for Update or blank to clear displayed data.
Build Directive Number*	4	A/N	Enter BDN for which identification is required.

*Mandatory entries.

b. The following data elements will be displayed on the CRT screen for review or update:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Stock Number	15	A/N	For information only.
Nomenclature	22	A/N	May add or change.
Estimated Cost	8	N	May add or change.
Unit Assembly Number	4	A/N	May add or change.
Routing Identifier Code From	3	A/N	For information only.
Project Order Number	15	A/N	May add or change.

best copy available

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Document Number	14	A/N	May add or change.
Ship To Activity Address Code	6	A/N	May add or change.
Job Order Number	6	A/N	May add or change.
End Item Receipt Document Number	14	A/N	May add or change.
Assemblage Control Number Prefix	4	A/N	For information only.
Assemblage Control Serial Number	4	A/N	May add or change.
Assemblage Identification No.	2	A/N	For information only.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UJ.
Process Indicator	Must be I, U or blank.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Estimated Cost	Numeric or blank.
Document Number	Positions 1-6 alpha/numeric, positions 7-10 numeric, positions 11-14 alpha/numeric. When first position is 8, must not have blanks or all zeros. May be blank if first position of BDN is 7.
Ship To Activity Address Code	Alpha/numeric or blank.
End Item Receipt Document Number	Positions 1-6 alpha/numeric, positions 7-10 numeric, positions 11-14 alpha/numeric, must not have blanks or all zeros.

APPENDIX B-324

FUNCTION AND SUBFUNCTION INQUIRY

1. PURPOSE

This CRT input will generate a display of the Function/Group Name for the Function/Group Code entered or the Subfunction Name for the Subfunction Code entered. This entry may also be used to obtain the Function and Subfunction Report (appendix F-337).

2. REFERENCE

Appendix E-277 P, part B.

3. DATA ELEMENTS

a. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter IA.
Build Directive Number*	4	A/N	If BDN is the only entry, the Function and Subfunction Report will be produced.
Function/Group Code	1	A	Enter code for which name is desired.
Subfunction Code	2	A/N	Enter code for which name is desired. Do not use if entry is in the Function/Group Code.
Requester Identification	4	A/N	Enter applicable requester identification when report is requested.

*Mandatory entries.

b. The following data elements will be displayed on the CRT screen:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Function/Group Name	20	A/N	For information only.
Subfunction Name	20	A/N	For information only.

FIELD LEGEND	VALIDATION
Processing Section Code	Must be IA.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Function/Group Code	Alpha, must be blank if Subfunction Code field has entry.
Subfunction Code	Alpha/numeric, must be blank if Function/Group Code field has entry.
Requester Identification	Alpha/numeric or blank.

APPENDIX B-325

CONTAINER DATA INPUT

1. PURPOSE

This input will generate a CRT display of container data when four or fewer containers are included in the request parameters. It will result in the output of the Container Data Report (appendix F-338) when information on more than four containers is requested. This input will also be used to assign containers to a shipping document sequence number and to input or update data associated with the container.

2. REFERENCE

Appendix E-277 P, part 0.

3. DATA ELEMENTS

a. The following data elements are entered via CRT to obtain display.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter UK.
Process Indicator	1	A	Enter I for Inquiry, C for Change, U for Update or leave blank to clear displayed data.
Build Directive Number*	4	A/N	Enter applicable BDN.
Assemblage Identification No.	2	A/N	Enter applicable AIN or ZZ if information is applicable to all assemblages.
Container Number Low*	4	N	Enter the applicable container number.
Container Number High	4	N	Enter high container number in conjunction with low to define containers included in the sequence.
Requester Identification	4	A/N	Enter applicable requester identification when report is requested.

*Mandatory entries.

b. The following data elements will be displayed on the CRT screen for review, update or deletion:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Container Number	4	N	For review only.
Type Package Code	2	A/N	Enter applicable Type Package Code.
Container Description	20	A/N	Enter applicable container description.
Container Weight	7	N	Enter the container weight including the weight of the pallet when applicable.
Container Cube	7	N	Enter applicable container cube. Field represents 6 whole numbers and one decimal.
Shipping Document Sequence Number	2	N	Enter applicable shipping document sequence number.
Container Location	9	A/N	For review only.
Pallet Number	4	A/N	For review only.
Container Label Data	30	A/N	Enter applicable container label data.
Weight of Pallet	7	N	Enter the weight of any materials handling aid, such as a pallet, which is authorized for exclusion from transportation billing.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be UK.
Process Indicator	Must be I, C, U or blank.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.

FIELD LEGEND	VALIDATION
Assemblage Identification Number	Alpha/numeric 01-20 or ZZ. Mandatory if BDN is "8---" (major) may be blank if BDN is "7---" (minor). ZZ cannot be used with process indicator C.
Container Number Low	Numeric, may be blank.
Container Number High	Numeric, may be blank.
Requester Identification	Alpha/numeric or blank.
Container Number	Numeric, may be blank.
Type Package Code	Alpha/numeric, may be blank.
Container Weight	Numeric, may be blank.
Container Cube	Numeric, may be blank.
Shipping Document Sequence Number	Numeric, may be blank.
Weight of Pallet	Numeric, may be blank.

APPENDIX B-326

COMPONENT AVAILABILITY STATUS REQUEST

1. PURPOSE

This CRT entry will provide for the output of Component Availability Status Report (appendix F-327) for the Build Directive Number entered.

2. REFERENCE

Appendix E-277 P, part V.

3. The following data elements are entered via CRT.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RG.
Build Directive Number*	4	A/N	Enter applicable BDN.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be RG.
Build Directive Number	Alpha/numeric, first position must be 8.

APPENDIX B-327

ASSEMBLAGE CONTROL PACKING DATA REQUEST

1. PURPOSE

This CRT input will provide for the output of Assemblage Control Packing Data (appendix F-329) for the parameters requested.

2. REFERENCE

Appendix E-277 P, part W.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RH.
Build Directive Number*	4	A/N	Enter applicable BDN.
Assemblage Identification No.*	2	A/N	Enter applicable AIN or ZZ if required for all AINs.
Function/Group Code	1	A	Enter Function/Group Code when applicable.
Container Number	4	N	Enter container numbers up to 40.
Container Number Low	4	N	Enter container number low when a sequence of containers is required.
Container Number High	4	N	Enter container number high in conjunction with container number low to define containers included in the sequence.
Requester Identification	4	A/N	Enter applicable requester identification.

*Mandatory entries.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be RH.
Build Directive Number	Alpha/numeric, first position must be 8.
Assemblage Identification Number	Alpha/numeric 01-20 or ZZ.
Function/Group Code	Alpha or blank. Must be blank when container numbers are included in entry.
Container Number	Numeric, blank or up to 40 entries. Must be blank when Function/Group Code is entered.
Container Number Low	Numeric or blank. Must be blank when Function/Group Code is entered. Must have entry when container number high has entry.
Container Number High	Numeric or blank. Must be blank when container number low is blank or when Function/Group Code is entered.
Requester Identification	Alpha/numeric, may be blank.

APPENDIX B-328

PACKING STATUS REQUEST

1. PURPOSE

This CRT entry will provide for the output of Packing Status Report (appendix F-300) for the parameters requested.

2. REFERENCE

Appendix E-277 P, part X.

3. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter RI.
Build Directive Number*	4	A/N	Enter applicable BDN.
Assemblage Identification No.*	2	A/N	Enter applicable AIN or ZZ if required for all AINs.
Function/Group Code	1	A	Enter Function/Group Code when applicable.
Container Number Low	4	N	Enter container number low when a sequence of container is required.
Container Number High	4	N	Enter container number high in conjunction with container number low to define containers included in the sequence.
Requester Identification	4	A/N	Enter applicable requester identification.
Container Number	4	N	Enter container numbers up to 40.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be RI.
Build Directive Number	Alpha/numeric, first position must be 8.
Assemblage Identification Number	Alpha/numeric 01-20 or ZZ.
Function/Group Code	Alpha or blank. Must be blank when container numbers are included in entry.
Container Number Low	Numeric or blank. Must be blank when Function/Group Code is entered. Must have entry when container number high has entry.
Container Number High	Numeric or blank. Must be blank when container number low is blank or when Function/Group Code is entered.
Request Identification	Alpha/numeric, may be blank.
Container Number	Numeric, blank or up to 40 entries. Must be blank when Function/Group Code is entered.

APPENDIX B-330

COMPONENT/PACKING DATA INQUIRY

1. PURPOSE

This CRT input will generate a display of component data and the applicable packing and inprocess quantities for the component control number inquired.

2. REFERENCE

Appendix E-277 P, part C.

3. DATA ELEMENTS

a. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter IB.
Build Directive No.*	4	A/N	Enter the applicable BDN.
Component Control No.*	5	N	Enter the applicable CCN.
Assemblage Identification No.	2	N	Leave blank to obtain component data at the BDN level. Enter specific AIN (01 for minors) to obtain packing data for the CCN.

*Mandatory entries.

b. The following data elements will be displayed on the CRT screen for review:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Stock Number	15	A/N	Information only.
Function/Group Code	1	A	Information only.
Subfunction Code	2	A/N	Information only.
Original Stock Number Indicator	1	A	Information only.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Substitute Stock Number 1	15	A/N	Information only.
Substitute Stock Number 2	15	A/N	Information only.
Substitute Stock Number 3	15	A/N	Information only.
Position Alignment Code	4	A/N	Information only.
Basic Quantity	7	N	Information only.
Extended Quantity	7	N	Information only.
Quantity on Hand	7	N	Information only.
Quantity Authorized Short	9	N	Information only.
Quantity Substituted	7	N	Information only.
Quantity Due In	7	N	Information only.
Packed/In Process Quantity	9	N	Information only.
Receipt Pick Quantity	9	N	Information only.
Quantity Packed	9	N	Information only.
Quantity in Process	9	N	Information only.
Container Low	4	N	Information only.
Container High	4	N	Information only.
Assembly Area	5	A/N	Information only.
Packing Exception Indicator	1	N	Information only.
Manufacturer	14	A	Information only.
Lot Number	12	A/N	Information only.

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Serial Number	15	A/N	Information only.
Contract Number	13	A/N	Information only.
Date of Pack	4	N	Information only.
Expiration Date	4	N	Information only.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be IB.
Build Directive Number	Alpha/numeric. First position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.
Component Control Number	Numeric.
Assemblage Identification Number	Numeric, 01-20 or blank.

APPENDIX B-331

STOCK NUMBER/COMPONENT CONTROL NUMBER INQUIRY

1. PURPOSE

This CRT input will generate a display of the component control numbers for a specific stock number within a build directive number.

2. REFERENCE

Appendix E-277 P, part E.

3. DATA ELEMENTS

a. The following data elements are entered via CRT:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Processing Section Code*	2	A	Enter ID.
Build Directive Number*	4	A/N	Enter the applicable BDN.
Stock Number*	15	A/N	Enter the applicable stock number.

*Mandatory entries.

b. The following data elements will be displayed on the CRT screen for review:

FIELD LEGEND	NO. OF CHAR.	TYPE	EXPLANATION/INSTRUCTIONS
Component Control Number	5	N	For review only.
Function/Group Code	1	A	For review only.
Subfunction Code	2	A/N	For review only.

4. VALIDATION

FIELD LEGEND	VALIDATION
Processing Section Code	Must be ID.
Build Directive Number	Alpha/numeric, first position must be 7 or 8. Filled if first position is 8. May be 3 positions if first position is 7.

APPENDIX B-333

CUSTOMER/SERVICE DATA

1. This record format is used by the assembly activity to provide completed build directive information to the customer/service via magnetic tape.

2. REFERENCES

3. TAPE CONTENT

DATA SEQUENCE	NO. OF POSITIONS	TYPE	EXPLANATION
1	4	A/N	Build Directive Number.
2	8	A/N	Assemblage Control Number.
3	2	N	Assemblage Identification Number.
4	15	A/N	National Stock Number/Part Number.
5	7	N	Quantity Shipped for this Quality Data Suffix.
6	1	A	Quality Data Suffix (only assigned if there is multiple quality data for this NSN/Part Number).
7	20	A/N	Manufacturers Name (left-justify).
8	2	N	Manufacture Year (YY).
9	2	N	Manufacture Month (MM)).
10	2	N	Expiration Year (YY).
11	2	N	Expiration Month (MM).
12	1	A	Lot/Serial/Contract Indicator L=Lot, S=Serial, C=Contract
13	20	A/N	Lot/Serial/Contract Number (left-justify).
14	1	A	Function/Group Code.
15	4	N	Container/Pallet Number Low - will contain individual container numbers unless a series of containers applies.

DATA SEQUENCE	NO. OF POSITIONS	TYPE	EXPLANATION
16	4	N	Container/Pallet Number High - leave blank unless it takes more than one container to pack a quantity of 1 of the component.
17	15	A/N	Transportation Control Number - MILSTAMP TCN covering this item.
18	1	A	Partial indicator if the set was shipped via multiple conveyance.
19	1		Filler.
20	8	A/N	Government Bill of Lading Number covering this item. Will be blank if not shipped via GBL.

4. VALIDATION

APPENDIX C-1

STOCK OR PART NUMBER ENTRIES

1. When a 13-digit National Stock Number (NSN) is applicable:

a. The 4-digit Federal Supply Classification (FSC) class code number will be entered in pos. 8-11.

b. The 9-digit National Item Identification Number (NIIN) will be entered in pos. 12-20. (Note: For U.S. use, the National Codification Bureau (NCB) Code comprises the first two digits of the NIIN; codes 00 and 01 have been assigned to this Country.)

c. Example:

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22
NSN	8	3	2	0	0	0	3	1	2	3	4	1	2	BLANK	

2. When codes are required in addition to the NSN to properly identify the item being requisitioned and these codes are recognizable to the DSC, the codes will be entered in pos. 21-22. If only one digit is required, entry will be in pos. 21.

Example:

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22
NSN/1 code	8	3	2	0	0	0	3	1	2	3	4	1	2	3	BLANK

or

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22
NSN/2 codes	1	5	6	0	0	0	3	1	2	3	4	1	2	B	C

3. When a 13-digit NATO Stock Number is applicable:

a. The 4-digit NATO Supply Classification class code number will be entered in pos. 8-11.

b. The 2-digit National Codification Bureau (NCB) Code will be entered in pos. 12-13.

c. The 7-digit NATO Item Identification Number (NIIN) will be entered in pos. 14-20. (Note: For other than U.S. use, the NCB Code is not considered as part of the NIIN.)

d. Example:

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22
NSN	5	3	4	0	0	0	1	2	3	1	2	3	4	BLANK	

4. When a Manufacturer's Part Number is applicable:

a. The Manufacturer's Identification Code (Federal Supply Code for Manufacturers (FSCM), or other) will be entered in pos. 8-12 (see example in subparagraph e below). If this type of code is not available, entry will be in-the-clear and entered in the "Remarks" space.

b. The Manufacturer's Part Number, if 10 digits or less, will be entered in pos. 13-22 progressing from left to right, with unused spaces, if any, left blank. The construction of part numbers will conform to the requirements of DoD 4100.39-M, DIDS Procedures Manual.

c. When a Manufacturer's Part Number exceeds 10 digits, the entire Manufacturer's Identification Code and Part Number will be entered in the "Remarks" space and properly identified.

d. When requisitioning across Service lines (i.e., interservice, DLA, GSA) the Manufacturers Identification Code (pos. 8-12) will always be the prescribed 5-digit FSCM. When the requisitioner cannot determine the appropriate 5-digit code, the manufacturer's name will be provided using DD Form 1348-6.

e. Example:

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22
Part Number	1	2	3	4	5	1	2	3	4	5	6	7	8	9	0

f. If a stock number or Manufacturer's Part Number is not known but a description or publication reference is available to adequately identify the item, and such reference is meaningful to the processing point, the Stock or Part Number field will be left blank and the descriptive or reference data will be entered in the "Remarks" space of the DD Form 1348-6.

5. When other than an NSN or Part Number is applicable (i.e., a Production Equipment Code (PEC), DoD Ammunition Code, or locally assigned number):

a. If 15 digits or less, it will commence in pos. 8 and progress to the right, with unused spaces left blank.

b. Examples:

(Less than 15 digits)

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22
Number	1	2	3	4	5	6	7	8	9	1	2	3	BLANK		

(15 digits)

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22
Number	11	2	3	4	5	6	7	8	9	1	2	3	4	5	6

c. If 16 digits or more, the entire number will be entered in the "Remarks" space.

d. Brand Name Resale Subsistence items are identified by special Item Identification Numbers assigned by DPSC and configured to conform with the NSN, as explained below:

(1) Field positions 8-11 will contain the 4-digit FSC class code number. Example: FSC class 8915 is canned fruits and vegetables.

(2) Field positions 12-13 will contain the 2-digit NCB Code 00 or 01.

(3) Field position 14 will contain an alpha character to distinguish Brand Name Resale Item Numbers from NSNs. The letter A identifies items in the 10-500 series of DLA Supply Bulletins for Brand Name Resale items. The letter B identifies items in the 10-600 bulletins. The letters S and J are assigned to certain Brand Name items not appearing in the 500 and 600 series bulletins. The latter are announced by DPSC in monthly Master Item Lists.

(4) Field positions 15-17 will contain the Supply Bulletin Number, which identifies the Brand Name supplier. Example: For SB 10-500-161, the numerics 161 identify the specific supplier by name for Brand Name Resale items listed in that bulletin.

(5) Field positions 18-20 will contain the numeric sequence of items listed in the specific bulletin (0 through 999), i.e., the line item number in the bulletin.

(6) Example:

pos.	8	9	10	11	12	13	14	15	16	17	18	19	20
	8	9	1	5	0	0	A	1	6	1	4	9	9
	FSC Class				NCB Code		Alpha	SB Number			Item Number		

e. Requisitions for perishable and nonperishable Subsistence will contain the applicable Subsistence Type of Pack Code in pos. 21. MROs for nonperishable Subsistence will contain the applicable Subsistence Type of Pack Code in pos. 73.

6. Field position 3 of the DIC (see appendix A-1) is significant to the type of number entered in pos. 8-22.

a. Any requisition containing an NSN, irrespective of additional codes in pos. 21-22, must have a 3 (for overseas shipment) or a C (for domestic shipment) entered therein unless additional data are contained in the "Remarks" space.

b. Any requisition containing a Part Number must contain a 2 or B unless additional data are entered in the "Remarks" space.

c. Any requisition containing a PEC, DoD Ammunition Code, or locally assigned number, must contain a 4 or D unless additional data are entered in the "Remarks" space.

d. Whenever additional data are entered in the "Remarks" space, regardless of the content of any positions of the requisition (including pos. 8-22), this position must contain a 5 or E and the requisition must not be transceived.

APPENDIX C-2

DOCUMENT NUMBER ENTRIES

1. The Document Number is a nonduplicative number, and once assigned, remains unchanged throughout the life of the source document. On requisition type documents four basic elements of data are required. They are:

a. Military Service (pos. 30) or FEDSTRIP AGENCY (pos. 30 and 31).

b. Requisitioner (pos. 31-35) or FEDSTRIP ADDRESS (pos. 32-35).

c. Julian Date (pos. 36-39).

d. Serial Number (pos. 40-43).

2. The entries in pos. 30 or pos. 30 and 31 (Service or agency) will always be the appropriate character or characters that indicate the Service or agency ownership or sponsorship. Specific alphabetic characters are prescribed for normal requisitioning and shipping, and ILP programing Service and contractor's use. Numeric characters are reserved for use on requisition initiated by those activities participating in FEDSTRIP.

3. Entries in pos. 31-35 (Service requisitioner) may be alpha, numeric, or a combination of both, that indicate a specific account number for the purpose of requisitioning and/or receiving materiel. Entries in pos. 32-35 (civil agency addresses) may also be alpha, numeric or a combination of both. The account number or address for each activity will be established and disseminated by each of the Services, DLA, and the General Services Administration. MILSTRIP addresses, Federal Aviation Agency (FAA) addresses and addresses of the General Services Administration Supply Depots are contained in the DoD/Activity Address Directory. Each account or address established will contain or serve as an address to permit shipping and billing for materiel and for mailing of documentation.

4. Entries in pos. 36-39 (Julian date) will always be numerics and will indicate the actual date of transmittal from the requisitioner to the initial supply source.

a. Field position 36 will indicate the last numeric digit of the calendar year in which the document number was originated, e.g., 2 for 1972, 3 for 1973, and 4 for 1974.

b. Field positions 37-39 will indicate the numeric days of the calendar year, e.g., 281 for 8 Oct, 313 for 9 Nov, and 352 for 18 Dec.

5. Entries in pos. 40-43 may be numeric or alpha (with the exception that alpha I and O will not be used), to indicate the serial number of the document. Serial numbers will be assigned at the discretion of the document originator, but numbers will not be duplicated on the same day.

6. Special Document Identifiers are not provided to separately identify Inter-Service Supply Procedures (ISSP) Requisitions. However, since separate identity of the latter is required, the following alphabetic codes will be used in the first position of the Serial Number (pos. 40) of the Document Number field of all ISSP Requisitions and related issue documentation. Alphabetic codes not reserved for identity of ISSP Requisitions may be used at the discretion of the document originator.

CODE	EXPLANATION
J	To identify ISSP Requisitions resulting from interrogation and offer procedures.
K	To identify ISSP Requisition and followup documents resulting from DLSC mechanized screening procedures. Code K will be entered in pos. 40 of requisition documents prepared for materiel requirements upon receipt of offer notifications from DLSC. Code K will be perpetuated in all follow-on documents resulting from the requisition processing transactions.
L	To identify requisitions and other Excess Personal Property Redistribution Documents resulting from screening DLSC excessor potential excess listings. Code L will be entered in pos. 40 of requisition documents prepared by bases, posts, camps, and stations for materiel requirements determined available from screening DLSC excess or potential excess listings.
M	Reserved for future assignment.
N	To identify ISSP requisitions for conventional ammunition and follow-on documents resulting from DLSC mechanized screening procedures, Code N will be entered in pos. 40 of requisition documents prepared for materiel requirement for conventional ammunition upon receipt of offer notification from DLSC. Code N will be perpetuated in all follow-on documents resulting from the requisition processing transactions.
O	Not to be used.
P	IPE requisition coded P in pos. 40 denotes that the requisitioner intends to purchase the item if it is not supplied from IPE assets. This demand, if the item is supplied from IPE assets, denotes hard savings under the Cost Reduction subgroup area, "Reutilization of Idle Production Equipment".
Q	IPE requisition coded P in pos. 40 denotes that the requisitioner does not intend to purchase the item if it is not available from IPE assets. This demand, if the item is supplied from IPE assets, denotes a Cost Avoidance under the Cost Reduction subgroup area, "Reutilization of Idle Production Equipment."

CODE	EXPLANATION
R thru T	(Reserved for future assignment.)
U	Identify shelf-life items which are invoiced to PDO for utilization screening and/or disposal and reported in accordance with DoD 4140.34-M, Defense Utilization Manual and DoD 4160.21-M (Defense Disposal Manual).
Y	To identify Marine Corps ownership of materiel applicable to Contractor Inventory Utilization Group (CIUG) Procedures.

7. Examples of how other document numbers are to be constructed on the various type system inputs are as follows:

Materiel Receipt Cards
(Procurement Instrument Source)

FIELD POSITIONS	EXPLANATION
30-35	Six position code to identify the buying activity, e.g., DLA 00 for DESC, DLA 700 for DCSC and DLA 500 for DISC. (Reference Appendix N, Armed Services Procurement Regulation).
36-37	Last two digits of the fiscal year in which the instrument is issued.
38	Type of Procurement Instrument Code.
39-42	Four position alpha/numeric serial number.
43	Blank.

8. Document Number entries for ILP Requisitions (chapter 18, section 2), pos. 30-43, identify the Service, the requisitioner, the requisition data, and the requisition serial number as described below:

FIELD POSITIONS	EXPLANATION
30	a. For Grant Aid, the alphabetical code of the U.S. implementing Service/Agency designated to be the recipient of the ILP order. b. For Foreign Military Sales, the Service code of the Service/Agency maintaining FMS case control (appendix A-5).
31-32	The appropriate recipient country for ILP materiel (appendix A-19).

FIELD POSITIONS	EXPLANATION
33 (33-34 for Vietnam)	a. For Grant Aid, and one digit alpha or numeric code indicating the country recipient and place of discharge within the country (appendix A-22). b. For Foreign Military Sales a one digit alpha or numeric code indicating the country recipient and place of discharge when not applicable a numeric zero will be entered. Shipments will be made to the address indicated by the entry in pos. 33 and the corresponding address in appendix A-22 when an XX appears in pos. 46-47. In all other instances regardless of entry in pos. 33, the materiel or notice will be forwarded to the address contained in appendix A-25 for the coded entry in pos. 46-47. c. An XW in pos. 46-47 indicates that the materiel is to be shipped to an assembly point or staging area. In such instances, in-the-clear shipping instructions are contained in the remarks portion of the requisitions and related materiel release orders.
34	a. For Foreign Military Sales, a one digit numeric code indicating the terms of delivery (appendix A-23). b. For Grant Aid this entry is not applicable. A number 0 will always appear with exception of Vietnam as noted above.
35	A one digit alpha or numeric code indicating the type of assistance (appendix A-24).
36-39	Julian Date - last digit of the calendar year in pos. 36 and the day of the calendar year in pos. 37-39 (i.e., 31 January is expressed as 031).
40-43	a. The serial number of the requisition. The number is assigned at the discretion of the requisitioner but will not be duplicated on any one day. b. For FMS requisitions the data entered in the serial number field is the item number of the country case (order). The case is entered in pos. 48-50.

9. The Defense Property Disposal Service (DPDS) is authorized to assign a unique document number in each PLUS offer to an ICP using the ICP DoDAAD Code, the date of the offer and nonduplicated serial number for each date from a range of K series numbers predesignated by the Service/Agency and furnished to DPDS. This DPDS-assigned document number would become the document number for the offer rejection transaction.

APPENDIX C-3

SUPPLEMENTARY ADDRESS ENTRIES

1. The Supplementary Address for support of U.S. Forces documents is a two-part field to indicate:

a. Service (pos. 45) or FEDSTRIP agency (pos. 45 and pos. 46).

b. Address (pos. 46-50).

2. The entry in pos. 45 (Service or pos. 45-46 (FEDSTRIP agency) will always be the appropriate character that indicates the Service or agency. Specific alphabetic characters are prescribed for normal requisitioning and shipping and for MAP and contractor's use.

3. Entries in pos. 46-50 (MILSTRIP address) or pos. 47-50 or pos. 47-50 (FEDSTRIP address) may be alpha, numeric or a combination of both that indicates a specific account number or address code for the purpose of receiving materiel or receiving documentation. The account number or address code will be established and disseminated by each of the Services, DLA, and the General Services Administration. Each account or address code so established will contain addresses in detail to permit shipping and billing materiel and for mailing of documentation. (See DoD 4000.25-D.)

4. When the originator of the document desires to utilize these field positions (46-50) for other data, the entry will not be significant to other than the originator. In these cases, an alpha Y will be entered in pos. 45. The alpha Y indicates that the contents of the field (pos. 46-50) are not be disseminated, but will be perpetuated and appear on subsequent documents generated.

5. If the supplementary address is not required for billing, shipping or other identification, the field should be left blank or zero filled.

6. On all MAP Grant Aid Transactions, the ODMA Record Control Number will be entered in pos. 45-50 as follows: An alpha Y will be entered in pos. 45. Field position 46 will indicate the last numeric digit of the Program Year in which the requisitioned item was approved and funded. Field positions 47-50 will indicate the 4-digit program line item number of the requisitioned item (alpha, numeric or alpha/numeric).

Field Positions	45	46	47	48	49	50
Entry	Y	8	A	1	0	0

Y - Nonsignificant
8 - Program Year 1978
A100 - 1978 Program Line Number A100

7. On all Foreign Military Sales (FMS) transactions the entries will be as follows: pos. 45 will contain the MAP Service Code of the customer country's requisitioning Service. Field position 46 will contain the applicable Country Option Code A, Y or Z, or Code X to indicate options do not apply. Field position 47 will contain a code to designate the recipient of shipments and documentation. This entry will by the FMS Country Representative/Freight Forwarder Code (CR/FF) or Code X or W to indicate that a CR/FF is not applicable. (See DoD 5105.38-D.) Field positions 48-50 will contain the specific FMS case designator consisting of three alpha/numeric characters.

45	46	47	48	59	50
FMS	ADDRESS CODE FOR CANADA				
COUNTRY MAP SERVICE CODE	OPTION CODE OR CODE X	CR/FF CODE OR CODE X	FMS CASE DESIGNATOR		

APPENDIX C-4

MEDALOC MANIFEST
TRANSPORTATION CONTROL AND MOVEMENT
DOCUMENT (DD FORM 1384-2)

1. The following lists the computer printed fields on the DD Form 1384-2. This form is used to provide a MEDALOC Manifest Listing for all pallets. The data printed on this manifest are also tranceived to the overseas Aerial Port of Debarkation, reference appendix B-124.

2. One form is printed which provides pallet information. Additional forms are printed to list the individual shipment units for each consignee on the pallet. A separate form(s) is provided for each consignee on the pallet.

3. The following data are printed on the form to provide pallet information:

BLOCK	PRINT LINE	PRINT LINE POSITION	EXPLANATION/INSTRUCTIONS	SOURCE
Top Margin	1	8-10	Literal AIR	Computer
Top Margin	1	67-83	Literal ***** RECAP *****	Computer
1	4	2-4	Document ID TX2	Computer
2	4	8-12	Print Pallet ID positions 8-9, print positions 12-14 of pallet TCN in position 10-12.	Pallet Data
3	4	20-25	CCP DoDAAC SW3102 if DDMP SW3201 if DDTC	Table & Control
4	4	41-42	Air Commodity Code	CDP Data
5	4	62	Always A	Computer
6	4	69-71	APOE Code	Pallet Data/ Address File
7	4	87-89	APOD Code	Pallet Data/ Address File
9	6	8-9	Always PT	Computer
10	6	14-30	Pallet TCN	Pallet Data

BLOCK	PRINT LINE	PRINT LINE POSITION	EXPLANATION/INSTRUCTIONS	SOURCE
11	6	43-48	On Throughput Pallets print Consignee Code if POD is not OSN, HOW, PLA, EIL or HIK. On other single consignee and on Breakbulk Pallets as follows: APOD=RMS Print WK4FDK APOD=FRF Print WK4FDK APOD=HOW Print WF6LH1 APOD=PLA Print W8003H APOD=OSN Print WT4JBS APOD=EIL Print WC1JH5 APOD=HIK Print WX3JN7	CDP Data
12	6	62	Priority	Pallet Data
13	6	65-67	Required Delivery Date	Pallet Data
15	6	77-79	Date Shipped	Pallet Data

	21	46-48	Count of Shipment Units on Pallet.	Computer
	23	1-10	Literal FINAL DEST	
	23	14-15	Literal AT	
	23	17-22	On Throughput Pallets (Single Consignee) print Consignee Code if POD is not OSN, HOW, PLA, EIL or HIK. On other Single Consignee and on Breakbulk Pallets (Multiple Consignees) print as follows: APOD=RMS Print WK4FDK APOD=FRF Print WK4FDK APOD=HOW Print WF6LH1 APOD=PLA Print W8003H APOD=OSN Print WT4JBS APOD=EIL Print WC1JH5 APOD=HIK Print WX3JN7	Computer
	23	85-88	Pieces	Pallet Data
	23	90-94	Weight	Pallet Data
	23	96-99	Cube	Pallet Data

4. The following data are printed on a separate form(s) for each consignee on the pallet.

BLOCK	PRINT LINE	PRINT LINE POSITION	EXPLANATION/INSTRUCTIONS	SOURCE
Top Margin	1	8-10	Literal AIR	Computer
Top Margin	1	67-84	Literal CONTINUATION SHEET	Computer
Top Margin	1	93-95	Page Number	Computer

BLOCK	PRINT LINE	PRINT LINE POSITION	EXPLANATION/INSTRUCTIONS	SOURCE
1-24	2,4,6, & 8		Duplicate information from Pallet Form.	Computer
25	10	2-11	Literal FINAL DEST	Computer
	10	15-16	Literal AT	
	10	18-23	Throughput Pallet print Consignee Code if POD is not OSN, HOW, PLA, EIL or HIK. On Other Single Consignee and on Breakbulk print as follows: APOD=RMS Print WK4FDK APOD=FRF Print WK4FDK APOD=HOW Print WF6LH1 APOD=PLA Print W8003H APOD=OSN Print WT4JBS APOD=EIL Print WC1JH5 APOD=HIK Print WX3JN7	Computer
32-44	21-45		Print one line for each TCN on the pallet in print positions as follows: data is only printed every other print line a maximum of 14 TCNs per form; if there are more than 14 TCNs for one consignee, start a new form.	
		1-3	Document ID TX4	Computer
		5-9	Duplicate Data from print line 4 positions 8-12 (Pallet ID/Pallet TCN Serial Number)	
		11-16	Consignor of origin shipping activity. CCP AAC if Consolidated Pack.	CDP Data
		21-22	Air Commodity Code	CDP Data
		26-28	APOE	Pallet Data
		31-33	APOD	Pallet Data
		37-38	Type Pack Code	CDP Data

BLOCK	PRINT LINE	PRINT LINE POSITION	EXPLANATION/INSTRUCTIONS	SOURCE
		40-56	SU Transportation Control Number. On Consolidated Pack print Consolidated Pack TCN and only print one line entry on the form.	CDP Data
		58-63	Consignee	CDP Data
		64	Priority based on CDF priority 01-03=1, 04-08=2, 09-15=3	CDF Data
		66-69	Required Delivery Date	CDP Data
		74-76	Date Shipped Origin	CDP Data
		80-83	TAC A980 MEDALOC-E (DDMP) A984 MEDALOC-K (DDTC) A951 MEDALOC-P (W8003H) A924 MEDALOC-P POD=PLA A991 MEDALOC-A POD=EIL A992 MEDALOC-H POD=HIK	Computer
		85-88	Pieces	CDP Data
		90-94	Weight	CDP Data
		96-99	Cube	CDP Data

NOTE: If individual Consignee takes more than one form, print literal END OF THIS ACTIVITIES SHIPMENT, after the last shipment unit.

APPENDIX C-5

STORAGE QUALITY CONTROL REPORT
(DD FORM 1225)

STORAGE QUALITY CONTROL REPORT

1. DATE MAILED: 10 Oct 75
2. REPORT NUMBER: SC0300-2316-1103
3. TO: DPSC Directorate of Subsistence
ATTN: STQS, 2800 So. 20th Street
Philadelphia, Pa., 19101
4. FROM: Defense Depot Memphis
Memphis, Tennessee
5. FEDERAL STOCK NUMBER: 8915-127-7262
6. TYPE OF INSPECTION: [X] CYCLIC [ ] SHELF LIFE EXPIRATION [ ] SPECIAL [ ] RECOVERY [ ] OUTBOUND SHIPMENT [ ] OTHER (Explain in block 35 below)
7. NOMENCLATURE: PINEAPPLE, CRUSHED, no. 10 CAN

SPECIAL DD FORM 1348-1 FOR ISSUE OF MAJOR MEDICAL SETS

APPENDIX C-11

SINGLE LINE ITEM RELEASE/RECEIPT DOCUMENT WITH ATTACHED LABEL (DD FORM 1348-1)

1. The following lists the computer printed fields on DD Form 1348-1 and its attached address labels to provide DS/T or the Directorate of Industrial Plant Equipment Operations, of all available information, to assist in stock selection for shipping. DD Form 1348-1 will be printed with red ink for all IPG I MROs, green ink for IPG II MROs, and black ink for all IPG III MROs.

2. This form is also utilized to inform the DS/T of DD Form 1348-1 prepared for stock picking when an item is under inventory. Processing of this DD Form 1348-1 is depicted in appendix E-064 P.

3. For manual entries required to complete DD Form 1348-1 refer to appendix E-011 P, Single Line Item Release/Receipt Document (DD Form 1348-1) for shipment.

4. Return addresses in Block A and shipping label of the DD Form 1348-1 for each DLA Depot may be printed by selecting the print option in Table 04 (Action Code 22) of the Table and Control File.

5. The following entries will be printed:

POSITIONS	FIELD LEGEND	EXPLANATION	SOURCE
1-3	Document Identifier Code	Code identifying source document.	MRO
4-6	Routing Identifier Code (From)	RIC of shipping activity.	MRO
7	Media and Status Code	Code assigned to requisition document.	MRO
8-20	Stock Number	Stock number of item being shipped.	MRO
(21)	Type Pack Code	Subsistence type pack code	DRO
21-22	Blank	Leave blank.	
23-24	Unit of Issue	UI of item being shipped. (On IPE MROs UI is always considered to be EA.)	MRO

POSITIONS	FIELD LEGEND	EXPLANATION	SOURCE
(23)	Management Code	Management Code 6 or 7 indicating industrial or military equipment shipment (on IPE MROs).	
(24)	Condition Code	Condition Code indicated on IPE MRO.	
25-29	Quantity	Actual quantity being shipped.	MRO
(25-26)	Transportation Citation Code	IPE Transportation Fund Code.	MRO
(27-29)	Quantity	IPE Quantity being shipped.	MRO
30-43	Document Number	Document number originally assigned to requisition.	MRO
44	Suffix Code	Blank when total quantity requisitioned is being shipped. Alpha or numeric when this is a partial quantity release.	MRO
45-50	Supplementary Address	Code indicated on requisition or DROs, designated DRMO.	MRO
51	Signal Code	Code indicated on requisition.	MRO
52-53	Fund Code	Code indicated on requisition. Blank on DROs.	MRO
54-56	Distribution Code	Code indicated on requisition (pos. 54 blank on DROs).	MRO
57-59	Project Code	Code indicated on requisition.	MRO
60-61	Priority Code	Code indicated on requisition.	MRO
60	Reentry Code	X high punch. Manual entry.	DRO
61	Blank	Leave blank.	DRO
(55-61)	Retention Quantity	Quantity to be retained in storage.	DRO

POSITIONS	FIELD LEGEND	EXPLANATION	SOURCE
62-64	Required Delivery Date	Julian date indicated on requisition.	MRO
(62)	Precious Metals Identification Code	Code indicated on DRO.	DRO
(63)	ADPE Identification Code	Code indicated on DRO.	DRO
(64)	Disposal Authority Code	Code indicated on DRO.	DRO
65-66	Advice Code	Code indicated on requisition.	MRO
(65)	Demil Code	Demilitarization Code on DRO.	DRO
(66)	Reclamation Code	Code indicated on DRO.	DRO
67-69	Routing Identifier Code (From)	RIC of DSC directing the release of the materiel.	MRO
(70-80)	Item Identification Number	IPE Item Identification Number (i.e., equipment serial number) on IPE MROs.	
70	Purpose Code	Code indicated on requisition.	MRO
(70)	Ownership Code	Code indicated on DRO.	DRO
71	Condition Code	Code indicated on requisition (other than IPE MROs).	MRO
72	Management Code	Code indicated on requisition.	MRO
73	Type Pack Code	Code on Subsistence MROs.	MRO
73	DICOMSS Cycle Code	Code on DICOMSS MROs.	MRO
73	Screening Code	Code indicated on DRO.	DRO
74-80	Unit Price	Unit Price of the item being shipped.	MRO

POSITIONS	FIELD LEGEND	EXPLANATION	SOURCE
(74-79)	DPSC Unit Price (Non-Perishable Brand Name Item MRO's)	Unit Price of Item. Consists of two dollar positions and four cent positions to the right of the assumed decimal.	MRO
(80)	Variable Price Deduction Code	Used in conjunction with DPSC unit price. Appendix A-111.	MRO

NOTE 1: The above fields, appearing on the top line of DD Form 1348-1, are a printout of the original MRO/DRO.

NOTE 2: On shipments of major medical sets, a unique DD Form 1348-1 is prepared. A sample is shown on page III-4-C11-1. Only the fields depicted in the sample need be printed.

APPENDIX C-12

ORDER/RESPONSE FORM
WITH ATTACHED LABEL
(DCSC FORM 1938)

APPENDIX C-12

ORDER/RESPONSE FORM
WITH ATTACHED LABEL
(DCSC FORM 1938)

1. The following lists the computer printed fields on DCSC Form 1938 and its attached address labels. This form is utilized for the procurement of stock from Contractor Operated Parts Depots (COPADS). Procedures for processing the COPADS order/response form are depicted in apppendix E-275 P.

5. The following entries will be printed:

FIELD LEGEND	FIELD POSITIONS	EXPLANATION	SOURCE
Document Identifier Code	1-3	Code identifying source document.	CJW
Routing Identifier Code (From)	4-6	RIC of shipping activity.	CJW
Media and Status Code	7	Code assigned to requisition document.	CJW
Part Number	8-22	Part number of item being shipped.	CJW
Unit of Issue	23-24	UI of item being shipped.	CJW
Quantity	25-29	Actual quantity being shipped.	CJW
Document Number	30-43	Document number originally assigned to requisition.	CJW
Suffix Code	44	Blank when total quantity requisitioned is being shipped. Alpha or numeric when this is a partial quantity release.	CJW
Supplementary Address	45-50	Code indicated on requisition.	CJW
Signal Code	51	Code indicated on requisition.	CJW

FIELD POSITIONS	FIELD LEGEND	EXPLANATION	SOURCE
Fund Code	52-53	Code indicated on requisition.	CJW
Distribution Code	54-56	Code indicated on requisition.	CJW
Project Code	57-59	Code indicated on requisition.	CJW
Priority Code	60-61	Code indicated on requisition.	CJW
Required Delivery Date	62-64	Julian date indicated on requisition.	CJW
Advice Code	65-66	Code indicated on requisition.	CJW
Routing Identifier Code (From)	67-69	RIC of DSC directing the release of the materiel.	CJW
Purpose Code	70	Code indicated on requisition.	CJW
Condition Code	71	Code indicated on requisition.	CJW
Management Code	72	Code indicated on requisition.	CJW
Unit Price	74-80	Unit Price of the item being shipped.	CJW

NOTE: The above fields appearing on the top line of DCSC Form 1938 are a printout of the original MRO.

APPENDIX C-39

WATER COMMODITY GROUP TABLE

1. ORIGIN: The table is based on DoD Regulation 4500.32-R (MILSTAMP).

2. USE: The table is used during the shipment documentation process to facilitate the identification and grouping of water Commodity Codes which may be combined, provided other elements of consolidation criteria are met. MROs for items with blank in Water Commodity Code field on the Locator File will not be consolidated, when all other consolidation criteria are not. Water Commodity Codes not contained on the following table must be consolidated on an individual basis.

3. STANDARD: The following consolidation criteria applicable to Water Commodity Codes is provided:

a. Code series which may be combined and consolidated into multiline shipment units:

CODE SERIES	COMMODITY GROUP
570-579	Metal Products
580-589	Vehicle Parts
590-599	Machinery and Parts
650-659	Instruments and Apparatus
670-679	Aircraft Parts
700-772	Miscellaneous Items
790-793	Antisubmarine Equipment

b. Codes which may be consolidated within commodity group only, i.e., items containing codes 100-149 may be consolidated. But Codes 100-149 may not be consolidated with Codes 150-199 or any other group.

CODE SERIES	COMMODITY GROUP
100-149	Chill
150-199	Freeze
500-529	Subsistence
530-549	Drugs and Sundries
680-689	Ammunition and Small Arms
690-693	Containers

c. Codes which may be consolidated with like code only, i.e., items with code 621 may be consolidated. But Code 621 may not be consolidated with Code 622.

CODE SERIES	COMMODITY GROUP
550-561	Lumber and Logs
600-609	POL Items (except Bulk)
620-629	Paints, Varnishes
630-639	Chemicals
660-665	Construction Materiel

APPENDIX C-41

NOTICE OF AVAILABILITY/SHIPMENT
(DD FORM 1348-5)

1. ORIGIN: This form is mechanically prepared by the shipping activity as a result of offering the shipment to transportation.

2. USE: This form is a manual Notice of Availability which provides advice of materiel shipments ready for release to designated FMS country representatives not having a mechanized capability to process card image NOAs. The DD Form 1348-5 together with a set of DD Form 1348-1 comprise the Notice of Availability (NOA). Data to be entered on the DD Form 1348-5 are those that describe the shipment unit while the supporting DD Form 1348-1 provides individual item data.

3. DISTRIBUTION: This is a three-part form of continuous pin-feed configuration. One copy of the DD Form 1348-5 will be retained by the shipping activity pending receipt of shipment release instructions. The remaining two copies will be forwarded with a set of DD Form 1348-1 to the addressee designated to receive the NOA. The recipient will annotate shipment release instructions on one of the copies and return it to the shipping activity. The remaining copy will be retained by the recipient.

4. The following are the blocks in the NOA document, DD Form 1348-5:

FIELD LEGEND	EXPLANATION/INSTRUCTIONS	SOURCE
Date	Enter NOA preparation date.	Computer
From	Enter the complete address of the activity originating the notice.	Table 05
For	Enter the in-the-clear name of the country receiving shipment.	Table 05
Number of line items identified on accompanying DD Form 250/ 1348-1	Enter the number of line items being shipped.	Shipment Unit File
Notice Number	Enter the Transportation Control Number assigned to the shipment.	Shipment Unit File
Case Number		MRO pos. 48-50
Type Pack Code	Enter the code identifying the type of pack of the shipment. If various codes apply, enter MX	Shipment Unit File

FIELD LEGEND	EXPLANATION/INSTRUCTIONS	SOURCE
Pieces	Enter the number of pieces comprising the shipment.	Shipment Unit File
Weight	Enter the total weight of the shipment.	Shipment Unit File
Cube	Enter the total cube of the shipment.	Shipment Unit File
Security Classification		Shipment Unit File
Ammunition/Explosive	Type Cargo Code description for Codes F, I or J.	App. A-34
Extreme Dimensions/ Weight	a. Weight: Enter the weight in tons of the heaviest container.	Shipment Unit File
	b. Length: Enter the length of the longest piece of the shipment unit in feet.	Shipment Unit File
	c. Width: Enter the width of the largest piece of the shipment unit in feet.	Shipment Unit File
	d. Height: Enter the height of the largest piece of the shipment in feet.	Shipment Unit File
Consigned To	Blank	
Other Information	Will be used for conveying additional information or instructions as dictated by type of materiel or NOA. For shipments of hazardous materiel the following statement applies: "Hazardous Materiels Only" Intended Mode of Shipment to Final Destination Air---Water (Circle One)	App. A-34 App. A-81 App. A-98

FIELD LEGEND	EXPLANATION/INSTRUCTIONS	SOURCE
Addressee	The address of the country representative of freight forwarder designated to receive NOAs. Type Address Code 3.	DoDAAC File

APPENDIX C-43

STORAGE SPACE MANAGEMENT REPORT (DD FORM 805)

1. USE

To provide data on utilization and occupancy of storage space at Defense Depots and DSCs.

2. AUTHORITY

DLAR 4145.3, Storage Space Management Report (DD Form 805) RCS DLA (SA)2260(O).

3. FREQUENCY

Semiannual

4. DISTRIBUTION

The Storage Space Management Report (DD Form 805) is submitted on a semiannual frequency, as of 30 June and 31 December to HQ DLA IAW current MIS 178 instructions.

5. PROCEDURES

a. DD Form 805 is prepared from local feeder reports (appendix C-83) by the MSO, DS/T. Detailed procedures for gathering data to prepare feeder reports are prescribed in chapter 63.

b. DD Form 805 for period ending 30 June and 31 December:

(1) Report will include Sections A, B, C and D and lines 1 through 26.

(2) A consolidated report is to be submitted to include the applicable entries established in subparagraph (1) above.

(3) Remarks will include a breakout by DLA commodity and other allocation/assignment and identify covered storage space in terms of total square feet allocated, occupied, and vacant (lines 9, 12 and 14). Open improved and unimproved square feet occupied will be included.

APPENDIX C-44

SHIPPING INSTRUCTION
(DLA FORM 1224)

SHIPPING INSTRUCTION

THIS SHIPPING INSTRUCTION IS ISSUED IN ACCORDANCE WITH AND SUBJECT TO THE TERMS, CONDITIONS AND PROVISIONS OF THE BLANKET PURCHASE AGREEMENT (INDEFINITE DELIVERY TYPE CONTRACT (BPA/IDTC-PIIN) REFERENCED BELOW. FAILURE TO RESPOND TO THIS SHIPPING INSTRUCTION WITHIN 10 DAYS FROM "DATE CALL/ORDER ISSUED" LISTED BELOW MAY RESULT IN CANCELLATION OF THIS SHIPPING INSTRUCTION.

DD FORM 1387-1 APR 66 MILITARY SHIPMENT LABEL

APPENDIX C-58

MILITARY SHIPMENT LABEL (CONT'D)
(DD FORM 1387)

1. DD Form 1387-1 Preparation:

a. MOFAST produces a mechanized DD Form 1387-1 on line when materiel is offered to transportation.

b. MOWASP provides (as an option) a stencil, printed as part of the computer processes, to DS/T for reproducing labels for freight shipments. The data printed on the stencil are accumulated as DD Forms.

(1) The stencil format is spaced for the requirements of Military Shipment Label, DD Form 1387. One stencil is printed for each shipment unit.

(2) The stencil format includes data for preparation of stencils for tag labels, DD Forms 1387-1.

(3) POE and POD Identifier Codes and in-the-clear addresses print on the stencil if available in the computer.

(4) Piece number, total pieces, weight and cube are not provided. Manual addition of these data to the label is made in conjunction with area packing and marking procedures (MILSTD 129 and MILSTAMP).

(5) Reproduction of stencil data is made with:

(a) Red border labels for IPG I line items.

(b) Blue border labels for IPG II line items.

(c) No border color for IPG III line items.

(6) Clerical controls in conjunction with matching DD Form 1348-1 are established to assure each stencil is used, changed or destroyed as shipments are packed, marked and assembled.

2. See previous page for mechanized DD Form 1387-1 and stencil format as prepared by the computer.

a. TCN - The Transportation Control

b. RDD - Required Delivery Date as shown on the MRO and DD Form 1348-1.

c. Project - Project Code, if applicable.

d. From - Coded and in-the-clear address of the depot.

e. Shipment Unit Number

f. Date label prepared (MOFAST only).

g. Priority - The appropriate IPG of the materiel being shipped.

h. POE - The Port of Embarkation Code and in-the-clear address.

i. POD - The Port of Debarkation Code and in-the-clear address.

j. To - Coded and in-the-clear address of the ultimate consignee.

k. FMS Cs Nr - FMS case number for shipment unit.

l. Piece No - Number of this piece in the shipment unit (MOFAST only).

m. Total Pieces - Total number of pieces in the shipment unit (MOFAST only).

n. Weight This Piece - Weight this piece (MOFAST only).

o. Cube This Piece - Cube this piece (MOFAST only).

p. Total Number of Packs - Numeric on border of form in line with coded address of ultimate consignee (MOFAST only).

q. Label Print Sequence Number - Numeric sequence number on right margin, first print line (MOFAST only).

3. DD Form 1387 is sequenced IAW depot option as defined in appendix A-66 (MOFAST only).

APPENDIX C-67

ANNUAL INVENTORY FORECAST

1. ORIGIN

Prepared and typed within the D/D in coordination with applicable Inventory Managers at the DSC.

2. USE

To schedule physical inventories in an orderly and timely manner and to furnish two copies to each applicable DSC.

3. FREQUENCY

Annually, as specified in chapter 7 of this manual; updated within 30 days subsequent to the end of each quarter to include any required changes.

4. DATA ELEMENTS

a. Part I - Physical Inventories

(1) DSC/NICP - Defense Supply Center or National Inventory Control Point.

(2) INV CAT - Inventory Category Code.

(3) NSN RANGE - Beginning and ending NSN or FSC.

(4) LOT SIZE - Number of NSNs in NSN/FSC RANGE.

(5) COUNT PERIOD - Period of time in which the inventory is planned. For closed inventories, this will be the starting and ending date.

(6) DSC FREEZE - Date MRO will be held at DSC.

(7) DEPOT FREEZE - Date depot will commence holding transactions.

b. Part II - Location Reconciliation

(1) 1st Quarter Date - .

(2) 2nd Quarter Date - .

(3) 3rd Quarter Date - .

(4) 4th Quarter Date - .

5. DISTRIBUTION

Two copies to applicable DSC/NICP.

STOCK LOCATOR CHANGE DOCUMENT
(DLA FORM 536)

1. DLA Form 536, Stock Locator Change Document, is provided for storage personnel to provide change location data to the computer files; i.e., establish a new location, delete a location or change location data on file.

2. Data may be submitted via program $$UWME10.

3. DLA Form 536 will be retained in location sequence:

a. If violation actions do not occur, the suspense file will be destroyed the next day.

b. If violation actions do occur, the suspense file will be used for review and corrective action. If necessary, the initiator of the ZBA action (signature block) will be contacted. Corrective actions will be annotated to the "remarks" block and filed for periodic management review.

4. DATA ELEMENTS

Reference appendix B-71.

FIELD LEGEND	POSITIONS	EXPLANATION AND INSTRUCTIONS
Blank	41-44	Leave blank.
Inspection Date*	45-48	Enter month and year of current inspection date of materiel if applicable.
Date of Pack/Expiration	49-52	Enter date of pack, (month and year, e.g., 0866 for August 1966) nonshelf life materiel. Enter expiration date - shelf-life materiel.
Lot/Contract Number	53-57	Enter when applicable.
Lot/Contract Indicator	58	Enter L for lot; C for contract when pos. 53-57 has data.
Blank	59-62	Leave blank.

APPENDIX C-95

U.S. GOVERNMENT BILL OF LADING
(SF 1103)

1. This form is utilized for processing shipments. Preparation will be manual, i.e., typewriter and/or flexowriter facilities by Directorate of Storage and Transportation. Data under "Description of Articles" will be shown if the Bill of Lading is a single line item. When this action is for multi-lines, the Continuation Sheet is used.

2. The alpha subparagraphs shown below provide a reference and explanation for the completion of the form.

a. Prefix Symbols and Serial Numbers. Enter the prefix symbol. The prefix symbol is a part of the bill of lading number and must be shown with the serial number.

b. Transportation Company - Tendered to. Enter the full name of the initial line-haul carrier.

c. Traffic Control Numbers. Enter the route order number, the export release number, and other symbols assigned to the movement. Dates of validity of such numbers will also be shown whenever they are specified. (See DLAR 4500.3 for additional details.)

d. Initials, Numbers, Sizes and Capacities of Railroad Cards, Motor Vehicles, Aircraft and Barges. Enter the appropriate information. (See DLAR 4500.3 for additional details.)

e. Date Bill of Lading Issued. Enter the date of issue. The date of issue will be the date the first entry is made on the bill of lading.

f. From (Shipping Point). Enter the name of the point at which the shipment is actually tendered to the initial carrier. When such point is outside the switching district, the name of carrier's station, name of military installation or name of industry, as the case may be, will be shown.

g. Full Name of Shipper. Enter the name of the shipping establishment except when a bill of lading is issued to a contractor or other authorized shipper to cover a shipment from another point. In such instances, only the name and designation of the actual shipper will be shown in this space.

h. Marks. Enter under the heading "Marks" all markings which are common to the various packages making up the shipment. Any marks having reference to transportation, delivery at destination or identification of packages in route or at destination must be shown (see DLAR 4500.3 for additional details).

i. Consignee. Enter the designation or official title of consignee and the official name of installation or activity in accordance with particular shipping instructions. Other information such as name of Government department, name, military grade and serial number or title of an individual, post office address and whether plant or warehouse delivery is desired, will be shown. When consignee's post office address differs from the billed destination, it will be added in parentheses. When shipment is consigned for transshiped or delivery to other than the billed consignee, the word "For" and appropriate additional information will be shown in the "Marks" space.

j. Destination. Enter the destination. Instructions contained in the Terminal Facilities Guides (DLAH 4510 series) designate, according to the mode of transportation utilized, the city, town or point and state to be shown on bills of lading as destination. For consignees not listed in the guides and when precise information is not contained in the requisition or other shipping directives, advice and assistance may be obtained from local representatives of carriers, the destination transportation officer, or the appropriate MTMTS Regional Office. When there are two or more cities or towns of the same name in a state, the name of the county in which the destination is located also must be shown. (See DLAR 4500.3 for additional details.).

k. Routing (via). Enter the routing instructions provided in the route order or export release will be shown in the "Via" space of the bill of lading. For carriers, the abbreviations provided in the Uniform Alphabetic Code for Railroad Identification as published in the Official Railway Equipment Register will be used by routing authorities except that in those few instances when an abbreviation for a particular rail carrier is not shown, the full name of the carrier will be used. For other modes, the full corporate name of each carrier participating in the route will be shown. (See DLAR 4500.3 for additional details.).

l. Pickup Service. Enter, when applicable, the space marked "Carrier Furnished __ Pickup". (See DLAR 4500.3 for additional details.).

m. Trap Car Service. Enter, when shipments are loaded at origin by the shipper into trap cars, the space marked "Carrier Furnished __ Trap Car Service at Origin". (See DLAR 4500.3 for additional details.)

n. Switching at Origin. Enter, when switching service is required and performed at point of origin on carload railway express, or by car-carrier(s) other than the initial carrier in connection with a line-haul movement of freight, the following notation in the "Description of Articles" column: "Switched at origin by _____, (Name of switching carrier)." A record of the switching service performed will be maintained. The "Remarks" column of the Car Record may be used for this purpose.

o. Charges to Be Billed To. Enter the official designation and address of the office responsible for payment of charges, referred to as the disbursing office. (See DLAR 4500.3 for additional details).

p. Appropriation Chargeable. Enter the appropriation chargeable, name of the Government agency, and full allotment symbol when a specific allotment is chargeable. (See DLAR 4500.3 for additional details).

q. Number and Kinds of Packages. Enter the number of packages or containers, kind of package (barrels, boxes, or crates), and number and kinds of pallets used, if any, in the spaces provided. The number of articles or inner containers in any box, barrel, crate or other receptacle, will not be shown. Except for shipments of bulk freight, such as coal, gravel or scrap, the number of pieces or units will be shown in the "package" column when articles are shipped loose.

r. Description of Articles. Enter the proper freight description of each article shipped on all copies of the billing of lading. Enter the dimensions of the largest oversized package below the description. (See DLAR 4500.3 for additional details.)

s. Numbers on Packages. Enter, when packages are serially numbered, numbers in the space marked "Numbers on Packages" on the bill of lading.

t. Weights. Enter the weights on the bill of lading:

(1) Terms Used to Designate Weights:

(a) Regular rail or rail express shipments. Weights shown on bill of lading will be specified as "Agreed" or "Tariff" weights, to conform to the provision of weight agreements.

(b) Special rate quotation. When a schedule of agreed weights has been established under freight rate quotations or tenders covering specific commodities, "Agreed Weights" will be specified on the bill of lading.

(c) Shipments by motor or other modes. Actual or tariff weights will be shown on bills of lading covering shipments made by all modes of transportation other than rail freight and railway express. When tariff weights are used, the term "TARIFF WEIGHT" will be entered on the bill of lading.

(d) Estimated weight. When a reliable weight cannot be determined before shipment, an "Estimated" weight will be shown. In this case, the bill of lading will show "Estimated weight; weigh and correct."

(2) See DLAR 4500.3 for additional details.

u. Cubic Measurement. Enter, when shipments are to be loaded on vessels or consigned to ports for later movement by water, the total measurement of the shipment in cubic feet on the bill of lading. When a shipment is made up of a number of items, the cubic measurement for each item, or group of items, and the total number of cubic feet will be shown. (See DLAR 4500.3 for additional details.)

v. Name of Transportation Company. Enter the full name of the initial carrier in the same manner as in the block marked "Transportation Company Tendered to" (reference paragraph 2b above).

w. Date of Receipt of Shipment. Enter the date the carrier accepted the shipment. This date serves as the basis for determining when the carrier's responsibility for the shipment begins.

x. Signature of Agent--Per. Entering the signature of agent. The consignor will assure that carrier's agent manually signs the bill of lading in the space provided upon acceptance of the shipment. When the carrier's agent has an authorized representative accept shipment, the representative will sign the agent's name and enter the agent's own initials in the block marked "Per".

y. Certificate of Issuing Officer. Enter the authority for making the shipment (to be distinguished from routing or authority for method of shipment) in the "Certificate of Issuing Officer." (See DLAR 4500.3 for additional details.)

z. Seal Record. Enter the ownership and numbers of the seals applied by shippers to carriers' equipment in the space marked "Seal Nos." (See DLAR 4500.3 for additional details.)

aa. Shipper's Load and Count. Enter the Shipper's Load and Count or "SI&C"; the carrier may require that the bill of lading be annotated as such when shipments are loaded by the shipper and no check or tally has been made by the initial carrier as to the contents of the transportation unit or units.

ab. Special Military Service, Exclusive Use of Carrier Equipment, or Other Special Services. Enter special remarks. (See DLAR 4500.3 for additional details.)

ac. Car or Truck Loaded to Capacity. Enter a check in the block indicated "Yes" at the foot of the "Description of Articles" space when a shipment loads the car or truck to its full visible capacity or to its weight carrying capacity. When this situation arises and multiple cars or trucks are used, the statement "Loaded to Capacity" and the dimensions or cubic measurement of the loaded space of each car or vehicle will be shown.

ad. Tariff or Special Rate Authorities. Enter, when in connection with MTMTS routed traffic the MTMTS routing office has advised the shipper as to the applicable tariff, such information on the original and all copies of the bill of lading in the space marked "Tariff or Special Rate Authorities" (C/L-T/L or Vol. only).

ae. Valuation of Shipments. The shipper enters the actual value of the shipment. (See DLAR 4500.3 for additional details.)

af. Attendants With Shipments. Enter, when the nature of property shipped, or circumstances attending the shipment require that one or more attendants accompany rail freight or express shipments, the appropriate notations or references on the bill of lading. (See DLAR 4500.3 for additional details.)

ag. Export License and Shipper's Export Declaration. (See DLAR 4500.3 for details governing When Not Required/Required Notation.)

ah. Consignee's Certificate of Delivery. Enter applicable information in the spaces provided in the Consignee's Certificate of Delivery. (See DLAR 4500.3 for additional details.)

ai. Action by Transportation Officer at Stopoff Loading Point. The Transportation officer at each stopoff enters complete bill of lading data.

aj. Action by Consignee at Final Destination. The consignee at final destination will accomplish the original bill of lading in the regular manner for only that part of the shipment received at final destination.

3. Detailed procedural instructions are contained in appendix E-095 P.

APPENDIX C-96

U.S. GOVERNMENT BILL OF LADING-ORIGINAL
CONTINUATION SHEET
(SF 1109)

1. The GBL Continuation Sheet is utilized for multilines, when Standard Form 1103, (U.S. Government Bill of Lading), does not provide necessary space.

2. Documentation format is developed manually as follows:

a. Line 1: Bill of Lading Number.

b. Line 2: Page Number.

c. Line 3: (First Page): Appropriation Number.

d. Line 4: Transportation Control Number and "Ship To" Code.

e. Line 5: Priority Group/Required Delivery Date/Port of Debarkation and Project Code.

f. Line 6: Skip.

g. Line 7: Number of Packages/Kind/Federal Stock Number/Quantity/Shipment Unit Number/Cube/Weight.

h. Line 8: Document Number/UFC with SFX/NMFC with SFX.

i. Line 9: Location (AREA)/Item Description/Container Number.

j. Line 10: NMFC Description.

3. Repeat Lines 7 through 10 for all items under one TCN.

4. Print Package and Fund Total Cube and Weight.

5. Skip for new appropriation code, if appropriate, and repeat lines 3 through paragraph 4, as appropriate.

6. Provide GBL Grand Total Cube and Weight.

7. List MDT with SU Number and Lines involved, as needed.

8. Detailed procedural instructions are contained in appendix E-095 P.

APPENDIX C-104

STORAGE LOCATION IDENTIFICATION LABEL

1. ORIGIN: This label is computer prepared. Each label is prepared with a gummed or adhesive back.

2. USE: The Storage Location Identification Label serves the following purposes:

a. Identifies materiel in storage and the applicable location.

b. Identifies reserved bin locations.

c. Provides a means of deleting locations and data from the locator subrecord.

3. Storage Location Identification Labels are furnished for:

a. Each occupied location in the locator subrecord.

b. Each reserved bin location in the locator subrecord.

4. New or revised labels will be furnished:

a. When status of a location changes between occupied/reserved or vacant.

b. When storage item change processing changes or consolidates stock number(s).

c. When condition code for a specific location is changed.

d. When UI, commodity manager, shelf-life, or type storage code is established or changed (reference note 3).

e. When specifically requested during a location survey action by annotating the Location Survey Card, appendix B-78, with Management Code L entry.

FIELD LEGEND	EXPLANATION AND INSTRUCTIONS
NORMAL ENTRIES	
1 - Location	Physical Location.
2 - Type Pack	Type Pack Code.
3 - Stock Number	Stock Number.
4 - Shelf-Life Code	Shelf-Life Code.
5 - Type of Location Code	Type of Location Code.

FIELD LEGEND	EXPLANATION AND INSTRUCTIONS
6 - Type of Storage Code	Type of Storage Code.
7 - Date Prepared	Date of preparation. Year and Julian date.
8 - Condition Code	Condition Code.
9 - Unit of Issue	UI
10 - Commodity Manager	Commodity Manager.
ADDITIONAL ENTRIES	Additional data if Storage Item Change Card caused the change.
11 - Effective Date	Effective date of change.
12 - Stock Number	Old or previous stock number.

NOTE 1: The above will be interpreted as a 3-line print (see format below).

NOTE 2: When changes are made due to Storage Item Change Card processing, the new data will be printed near top of the label. Old stock number and effective date will be printed on third line.

NOTE 3: Where a basic item locator record does not exist and a new locator subrecord is established, commodity manager, shelf-life code, and UI will not appear on label. When UI, shelf-life code, and commodity manager are established in the record, a new label will be provided.

NOTE 4: At DGSC in DISARS controlled warehouses a DISARS Control Document (DCD) will be used in lieu of this label.

5. Detailed procedural instructions are contained in appendix E-104 P.

APPENDIX C-105

PERMANENT BIN LABEL

1. ORIGIN

This label is computer prepared. Each label is prepared with a gummed or adhesive back.

2. USE

To provide a permanent identification of active or inactive locations.

3. New or revised labels will be furnished:

a. When specifically requested during a location survey action by annotating the Location Survey Card, appendix B-78, with Management Code B.

b. When specifically requested on a Rewarehousing Card, appendix B-72, with Action Code GD.

APPENDIX D-1

MRO HISTORY MANUAL CONTROL CARD

1. INITIATING ACTION

Upon entry of appendix B-123 with DIC ZAQ.

2. REFERENCES

a. Chapter 4, paragraph 304211.

b. Appendix E-123 V.

c. Appendix F-85.

d. Appendix F-107.

3. GENERAL

DIC ZAQ provides a means of flagging the MRO History Records which require manual processing of MRO Followup and Shipment Status inquiries. This action would normally be taken when an error is noted in th History file and would be used to prevent erroneous followup replies or erroneous cancellation responses from being transmitted automatically. This transaction may also be used to place any MRO History Record in DP status.

4. OUTPUT

a. Appendix F-85.

b. Appendix F-107.

APPENDIX D-2

INSPECTION SCHEDULED SHELF-LIFE ITEMS

1. INITIATING ACTION

First day of each month.

2. REFERENCES

a. Appendix B-116.

b. Appendix D-3.

c. Appendix D-39.

d. Appendix F-20.

3. GENERAL

a. This procedure provides for the production of the Surveillance Inspection/Operational Test Notice Card (appendix B-116) and the Inspection Schedules for Shelf-Life Items (appendix F-20).

b. The Surveillance Inspection/Operational Test Notice Card is used by the Depot to perform surveillance inspections and is designed to permit addition of new or changed data for computer reentry and processing as prescribed in appendix D-39.

c. The Inspection Schedules for Shelf-Life Items (appendix F-20) will be used as a control listing for controlling the Surveillance Inspection/Operational Test Notice Cards.

d. A listing of late in process surveillance test cards is included in this process and reflected in appendix F-20.

4. OUTPUT

a. Appendix B-116.

b. Appendix F-20.

SOURCE | ACTIONS/DECISIONS

Locator File

On first day of each month, scan locator files selecting NSNs meeting at least one of the following:

a. An inspection date falling within parameters of the current and older than current month.

b. Inspection date field blank or zero filled with a condition code of other than J, K, L, H or F.

Diversify between shelf life items, non-shelf life items, and local purchase items (subsistence Y-coded) requiring periodic inspections and build inspection reports. Sort on commodity manager code and first three positions of warehouse location. Page break on change of commodity code. Identify delinquent records (less than current month) in following manner:

a. SSLIND equals alpha A thru S, delinquent ZCØ.

b. All other SSLIND, delinquent ZCØ.

F-20 Part 3 Insp. Schedule Local Purchase

F-20 Part 2 Insp. Schedule Non-Shelf Life

F-20 Part 1 Inspection Schedule Shelf Life Item

DS/T

Inspection test cards will be prepared in three groups based upon the following criteria:

Group, Type I
All records with an alpha SSLIND equal to A thru S.

Group, Type II
All other SSLINS originally selected as due for inspection.

Group, Type I & II
All records with shelf life code of other than Ø with blank or zero filled inspection date and/or date of pack/expiration.

Build Type II Ispection/Operational Test Notice cards with following criteria:

Cc 1-3, ZCØ, leaving cc 24-35, 48, 49-52, 53, 54-58, 59, and 66 blank. From locator file: Location will be entered in cc 36-47; inspection date in cc 60-63; shelf life code, cc 64; condition code, cc 65. All other is self-explanatory. Build Group, Type I & II the same as above except cc 60-63, inspection date, and/or cc 4-7, date of pack/expiration, will contain 9999. For DGSC create a ZCØ tape if location has 1st position A.

1

ZCØ

DS/T

DISARS ZCØ Tape

DISARS

ACTIONS/DECISIONS

Note: If record is assigned condition code C, cc 48, date of next inspection, cc 49-52 will be equal to date of expiration. If record is assigned condition code B, cc 48 date of next inspection will be equal to a month which is 3 months previous to the date of expiration.

CLASSIFICATION SUSPENSE REPORT

1. INITIATING ACTION

Weekly screen of the Classification Suspense File.

2. REFERENCES

a. Appendix D-36.

b. Appendix D-39.

c. Appendix D-69.

d. Appendix D-70.

3. GENERAL

a. The Classification Suspense File is screened for suspended items which are listed on appendix F-22, Classification Suspense Report. All line items will be again included on the F-22 report if not cleared by the time the next biweekly screen is made.

b. Specific SICs will be forwarded to the Classification Suspense File on the SIC effective date, DIC CMC (UI changes only), CMR, and CML. The changes will appear once on the first report cycle resultant from the first biweekl scan of the Classification Suspense File after the SIC effective date. Specifically marked records affected by SIC action will be output on the F-22 regardless of the suspense date status. Record of changes will appear on the output report.

4. OUTPUT

INVENTORY CANCELLATION CARD

1. INITIATING ACTIONS

a. Appendix B-28, Inventory Notification Card from DSC, DICs CKB, CKC, and CKD.

b. Appendix B-70, Inventory Cancellation Card, DIC ZAS.

c. Appendix B-100, Inventory Reject Card (DSC to Depot), DIC CK9.

d. Internal actions as a result of processing DSC actions.

2. GENERAL

a. These records are manually or computer prepared. They cancel Inventory Suspense Files maintained in the computer provided they pass validation. Otherwise, appendix F-85 is prepared.

b. When delete actions are complete, the record is transferred to the Inventory History File.

c. Actions returned from the DSC which cannot be scheduled in the DSC records as requested, will be processed through the program for cancellation action.

d. Internal cancellation actions will be processed when:

(1) DRO in-process or received.

(2) NSN or UI Manager change in-process.

(3) Rejected DJB cards received from DSC.

(4) Type record B receipt open after cutoff day.

(5) Receipt confirmation (MRC) with Condition Code or Type Pack Code different than that established on the IDC File for the same receipt.

(6) Attempting to update a receipt in the IDC File with Status Code 1 when count adjust process has been completed for the NSN.

(7) Any receipt update action is attempted and the receipt on the IDC File is currently Status Code 1 and count adjust has been completed for that NSN.

LOADING OF INVENTORY WORKLOAD BANK

1. INITIATING ACTIONS

a. Appendix B-26, Physical Inventory Request Card, DIC DJA/ZJA.

b. Appendix B-67, Establishment of the Inventory Workload Bank, DIC ZAV.

2. REFERENCES

a. Appendix A-13, Management Codes.

b. Appendix A-18, Type of Physical Inventory Codes.

c. Appendix B-47, Inventory Reject Card.

d. Appendix C-67, Annual Inventory Forecast.

e. Appendix F-16, Inventory Workload Bank.

f. Appendix F-85, Violation Printout.

g. Chapter 7, Inventory.

h. Chapter 72, Location Reconciliation.

3. GENERAL

a. Input of actions, paragraph 1a or 1b, will cause a record to be established in the Inventory Workload Bank (IWB). Inputs will be validated as indicated by appendices B-26 and B-67. Invalid DJA inputs originating from a non-DLA source will be listed on the F-85, Violation Printout. Invalid DJA inputs originating from DLA sources will be returned to the DSC under DIC CK4, appendix B-47, and listed on the F-85, Violation Printout. Other invalid inputs will be rejected and reported in appendix F-85, Violation Printout.

b. Appendix B-26 (DJA) actions originating from the DSC will be processed direct from the DSC to this process. Appendix B-26 actions from non-DLA activities will input to the process directly from the ICP if coming via AUTODIN, or manually input to the process if mailed in or manually prepared at the depot. Appendix B-26 (ZJA) actions with Type Inventory Code C and Management Code A or B, when input, will automatically establish an Inventory Cutoff Date six days from the current day. Appendix B-67 (ZAV) actions will be input by Inventory Branch, not more often than once each day. Internal actions, as a result of reconciliation, will be input in the same cycle in which the reconciliation programs are run.

c. IWB will contain necessary data to generate Workload Forecast Reports (F-16) and to schedule inventories based on criteria input by appendices B-90, B-91, and B-170, Workload Pull Cards. This process will select NSNs for sample inventories and assign lot numbers. Manhour requirements will be computed.

d. Daily, the Workload Bank will be reviewed and all records past the Mandatory Action Date (date established plus 90) will be deleted. All records deleted will be reported on the F-117, Inventory Cancellation Listing.

4. OUTPUT

a. Appendix B-47, Inventory Reject Cards.

b. Appendix F-16, Inventory Workload Bank.

c. Appendix F-85, Violation Printout.

d. Appendix F-117, Inventory Cancellation Listing.

INVENTORY COUNT UPDATE

1. DOCUMENT IDENTIFIER CODES

On-Line Input - Teleprocessing

2. REFERENCES

Appendix E-190 P, Inquiries and Updates to the Inventory Document Control File through the Teleprocessing System.

3. GENERAL

Inventory Count Cards, DIC ZKA, are entered into the computer via the (one line) teleprocessing method (appendix E-190 P). Inputs that pass validity check are checked against computer serial number suspense file. Violations in the teleprocessing system are displayed immediately to the operator for corrective action. Counts are held in suspense file until all counts for specific NSN are received, and then they are passed to the adjustment system. Daily, in the batch process, the suspense file is screened for open count cards; when count cards are open three days after cutoff date, an F-17 Report of Open Count Cards is output to DS/T for update action. During the day, an inquiry may be made IAW appendix E-190 P concerning open count cards for a specified stock number. This information is normally required for count cards with an associated MRO to ensure that all counts are completed before the end of the day and that MROs are released for processing in a timely manner.

4. OUTPUT

a. Appendix F-17, Open Count Cards on Inventory Suspense File.

b. Display on teleprocessor with option to print.

APPENDIX D-12

ACTIVATION OF WORKLOAD FROM THE INVENTORY WORKLOAD BANK (IWB)

1. INITIATING ACTIONS

a. Input of DIC ZAX, appendix B-90, DIC ZAW, appendix B-91, or ZAY appendix B-170, Inventory Workload Pull Cards.

b. Daily scan of workload bank for DSC requested inventories with cutoff dates.

2. REFERENCES

a. Appendix A-13, Inventory Management Codes.

b. Appendix A-18, Type of Inventory Codes.

c. Appendix F-16, Inventory Workload Bank.

d. Appendix F-85, Violation Printout.

3. GENERAL

a. This card is input to the computer based on established workload schedule to assign cutoff dates to items to be counted and establishes internal controls on locator, receipt, and shipping programs to ensure computer control of all transactions effecting the inventory count. Notification to DSC as to the cutoff date is prepared at this time. A report of all open transactions is prepared which will provide DS/T personnel with data to clear all open actions prior to the physical count.

b. At COB cutoff day, this process will generate count cards for all NSNs flagged for count on this day and all recounts required. Count cards will be sequenced as follows:

(1) If batching flag in T and C file is N, sort first count cards in three groups.

(a) No locations.

(b) Conditions other than A, B, C, and F in NSN sequence.

(c) All others in straight location sequence.

(d) Second and third counts in separate groups.

(2) If batching flag in T and C file is Y, sort first count cards as follows:

(a) No location - (Batch 1).

(b) Conditions other than A, B, C, and F (Batch 2).

(c) Sort balance into Matrix table groups (appendix F-11P2).

(d) Arrange Matrix Table X count cards in straight location sequence (Batch 4).

(e) Sequence remaining count cards in location sequence in accordance with Matrix table.

(f) Remove all NSNs with suspended MROs and also those with a matching count card in Matrix X (Batch 3).

(g) All remaining count cards are assigned Batch 5.

(3) All second and third count cards will be sequenced in NSN order and listed on F-11 report as Batch 6.

4. OUTPUT

a. Appendix B-25, Count Cards.

b. Appendix B-26, Physical Inventory Request Card.

c. Appendix B-29, Inventory Notification Card.

d. Appendix F-11, Summary of Count Cards.

e. Appendix F-16, Part 5, Inventory Forecast.

f. Appendix F-72, Open MROs Flagged for Inventory.

g. Appendix F-85, Violation Printout.

h. Appendix F-122, NSNs Scheduled for Count.

APPENDIX D-13

LOCATOR RECONCILIATION EXCEPTION CARD (FOR OTHER THAN DLA ACTIVITIES)

1. INITIATING ACTION

DICs CKB, CKC, and CKD (appendix B-28, Locator Reconciliation Exception Card Entries).

2. REFERENCES

a. Appendix A-82, Violation Codes

b. Appendix B-28, Locator Reconciliation Exception Card Entries

c. Appendix F-6, Locator Reconciliation Exception Card Summary Listing

d. Appendix F-117, Inventory Cancellation Listing

e. Appendix F-124, Locator Reconciliation Exception Card Listing

3. GENERAL

These cards are input to computer from DSC or other than DLA managers. Cards (CKB, CKC and CKD) identify differences between accountable records and locator files. Upon receipt from other than DLA managers, the computer will validate elements, update Locator Files, and produce appendix F-6 and appendix F-124 listings for DS/T usage. Computer suspense file is posted. For receipts from DLA managers, the action will cause an Inventory Cancellation action, and produce an appendix F-117 listing.

4. OUTPUT

a. Appendix F-124, Locator Reconciliation Exception Card Listing

b. Appendix F-85, Validation Reject Report

c. Appendix F-117, Inventory Cancellation Listing

APPENDIX D-14

OPEN MRO RECONCILIATION

1. INITIATING ACTION

Request to Data Systems Manager.

2. REFERENCES

a. Appendix E-177 P, Reconciliation of Open MROs.

b. Appendix F-47, Open MRO Reconciliation Report.

3. GENERAL

This procedure decision chart depicts the process by which the four part, Open MRO Reconciliation Report is produced. There is no document identifier associated with the production of this report and violation action is not applicable.

4. OUTPUT

Appendix F-47, Open MRO Reconciliation Report.

a. Part 1, Open History File.

b. Part 2, MRO Bank File.

c. Part 3, Shipment Unit Add-On File.

d. Part 4, Shipment Unit File.

APPENDIX D-15

ITEM LOCATOR SUBRECORD ADDITION, DELETION, AND CHANGE CARD

1. INITIATING ACTION

Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card, (DIC ZBA/9BA) with appropriate Action Codes. (DIC 9BA is created automatically by the computer as a result of certain other DICs.)

2. REFERENCES

a. Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card.

b. Appendix C-71, Stock Locator Change Document (DLA Form 536).

c. Appendix E-071 P, Procedures for Preparing Item Locator Subrecord Addition, Deletion, and Change Card.

d. Appendix E-071 V, Procedures for Processing Item Locator Subrecord Addition, Deletion, and Change Card Violations.

3. GENERAL

This chart depicts the process by which:

a. Locations are established in the Locator Subrecord.

b. NSNs are established in the basic Locator Record.

c. Locations are resequenced.

d. Locations are deleted from the Locator Subrecord.

e. MMHS Locations are identified by (alpha) O in the first position of the Location Code, appendix A-59.

f. First locator adds and last locator deletes are forwarded to DB&TR subsystem.

NOTE: The use of Action Codes required to accomplish these actions are explained in appendix B-71.

4. OUTPUT

a. Appendix B-114, Depot Balance and Transaction Register/Locator Data Correction Card.

b. Appendix C-104, Storage Location Identification Label.

c. Appendix F-33, Multiple Bin Location Listing.

d. Appendix F-34, Incomplete Item Locator Data Report.

e. Appendix F-85, Validation Reject Report.

REWAREHOUSING CARD

1. DOCUMENT IDENTIFIER CODE

ZUN, Rewarehousing Card.

2. REFERENCES

a. Appendix A-82, Violation Codes.

b. Appendix B-72, Rewarehousing Card.

c. Appendix F-85, Violation Printout.

3. GENERAL

a. The Rewarehousing Card provides a ready means of recording the transfer of stocks from one location to another and identifying the new location with its corresponding Warehouse Location Code. It will also update the Classification Suspense File and assist in the control of suspended materiel pending receipt of disposition instructions.

b. It will also be used to record a Bin Replenishment Action using type of Action Code FT in pos. 79-80. When FT Action Code is used with the ZUN (DIC) the program will not automatically close out the old location.

4. OUTPUT

a. Appendix B-116, Inspection/Test Card.

APPENDIX D-26

PMR FILE BACKORDER UPDATE

1. INITIATING ACTION

Merging the list of NSNs with backorders extracted from the Field Activity War and Emergency Support Plan (FAWESP) tapes received each month from the DSCs.

2. REFERENCES

a. Chapter 3

b. Chapter 19

3. GENERAL

a. This chart is designed to furnish an outline flow of actions and decisions involved in updating the Prepositioned Materiel Receipt File (PMRF) with backorder data from the FAWESP tapes.

b. Each month the DSC forwards an FAWESP tape to each of its storing depots. Each tape reflects the inventory on hand and due-in at that depot according to the DSC records. Included in each NSN record is an indicator advising whether the DSC has backorders for the NSN or not.

c. To expedite processing procurement receipts with backorders, the monthly FAWESP tape will be screened for backorder indicators and the Prepositioned Materiel Receipt File will be updated with the backorder indicator. Any subsequent A Inquiry response will be annotated with the message EXPEDITE - BACKORDERS PENDING.

APPENDIX D-27

WORKLOAD RELEASE

1. INITIATING ACTION

a. Periodic scheduling of low priority workload release.

b. Appendix B-98, Workload Request Card, ZBL.

2. REFERENCES

a. Appendix A-42.

b. Appendix B-98.

c. Appendix D-41.

d. Appendix D-65.

e. Appendix D-98.

f. Appendix D-108.

3. GENERAL

This chart represents processing of workload release of low priority MROs. After they have been merged into the Consolidation File, workload is released automatically, based on Planned Date to Transportation and other criteria. Workload may also be released by preparing a general purpose card to:

a. Request workload in addition to the workload already scheduled for the current Planned Date to Transportation (PDT), in conjunction with Action Codes (appendix A-42).

b. Request workload in addition to the workload already scheduled for Disposal Release Orders (DIC A5J) in conjunction with DRO Code W and Action Codes.

4. INPUT LIMITS

a. Thirty-five cards may be entered to pull workload by Special Project Code with Service Assignment Code.

b. Thirty-five cards may be entered to pull workload by Consignee - under emergency conditions only.

c. A hundred cards may be entered to pull workload by DEST.

d. One Hundred cards may be entered to pull workload by:

(1) Line Items.

(2) Geographic Shipping Area.

(3) Warehouse Area.

(4) Planned Date to Transportation or a combination of subparagraphs (1) through (4).

e. One card may be entered to pull only by Inventory Cutoff Date.

f. Fifty Cards may be entered to pull workload by NSN and cutoff date.

5. OUTPUT

a. Appendix B-8, Materiel Release Denial/Adjustment Card.

b. Appendix B-226, Disposal Release Denial/Adjustment Card.

c. Appendix F-38, Workload Forecast.

d. Appendix F-120, MRO Suspended for Inventory.

* ZBL may be input via CRT or card. Rejects from CRT input will be displayed back to the CRT.

**If Inv. Sort Group is Y in Table and Control, flag MROs to indicate suspended for inventory.

ACTIONS AND DECISIONS
1
Do ZBL transactions with Action Code CC or CD exceed 55 each
Y
Y
Do ZBL transactions with Action Code CE exceed 100
Y
N
Do ZBL transactions with Action Code CI and blank SSNs exceed 10
Y
N
Do ZBL transactions with Action Code CI and SSNs exceed 50
Y
N
Do remaining ZBL transactions exceed 100
Y
N
2
Reject ZBLs in excess of acceptable limit. Process remaining
F-85 Violation Code CU
DS/T

ACTIONS/DECISIONS

Note 1:

Applicable Action Codes and source of Workload Pull are as follows:

CC - Consignee
CD - Project
CE - DEST
CG - Line Items, PDT, Geographic Area
CI - Inventory Cutoff Date, NSN Number Inventory
CJ - Line Items, PDT, Geographic Area
CL - Line Items, Warehouse, Geographic Area
CN - Line Items, Geographic Area
CQ - Line Items, Warehouse, PDT
CS - Line Items, PDT
CT - PDT
CV - Line Items, Manhours
CX - Line Items

Note 2:

MROs flagged for Inventory will only be released when Action Code is CI.

APPENDIX D-28

MRO/DRO CONTROL AND STATUS REQUEST CARD

1. INITIATING ACTION

Appendix B-99, MRO/DRO Control/Status Request Card, DIC ZBM.

2. REFERENCES

a. Appendix A-42, Action Codes.

b. Appendix A-82, Violation Reason Codes.

c. Appendix B-99, MRO/DRO Control/Status Request Card.

d. Appendix E-099 P, MRO/DRO Control/Status Request Card.

e. Appendix E-099 V, MRO/DRO Control/Status Request Card Violations.

3. GENERAL

a. The MRO/DRO Control and Status Request Card is used to report completion of picking, packing, and assembly on individual items (MROs/DROs); the release of items to transportation, to report the shipment of parcel post items, and local pickup of materiel not requiring a Bill of Lading; to report actions such as warehouse refusals, denials, etc.; to request shipment status on an individual MRO/DRO or a complete shipment unit; and to code line items for the manual handling of inquiries. In addition, a delay reason or hold code may be entered when the shipment will be delayed.

b. Shipment Status Cards are also provided to the Defense Reutilization and Marketing Service on shipments made to disposal on a disposal turn in document when the item is pilferable/sensitive or has a line item value of $100 or more.

c. This process also covers shipment confirmation actions applicable to parcel post shipments at depots using the automatic clear date option.

4. OUTPUT

a. Appendix F-18, Status Cards Requiring POE in pos. 78-80.

b. Appendix F-40, Shipment Unit Line Item Inquiry Answer.

c. Appendix F-85, Validation Reject Report.

d. Appendix F-107, History File of Status Code DP Listing.

e. Appendix F-175, Area Control Branch Denial Listing.

f. Appendix F-83, Late MRO/DRO Process.

g. Output of card image forwarded through DAAS to applicable recipient:

(1) Appendix B-8, DIC A6_.

(2) Appendix B-14, DIC AR_.

(3) Appendix B-24, DIC AS_.

(4) Appendix B-14, DIC AU_.

(5) Appendix B-81, DIC AG6/AGJ.

(6) Appendix B-94, DIC AE6.

(7) Appendix B-225, DIC ARJ, ARK, ARL, AEJ.

(8) Appendix B-226, DIC AGJ.

2. REFERENCES

a. Appendix A-82, Violation Reason Code

b. Appendix E-101 P, Shipment Unit Completion Card

c. Appendix E-101 V, Shipment Unit Completion Card Violations

3. GENERAL

This appendix provides the actions and decisions to:

a. Validate the Shipment Unit Completion Card.

b. Change "freight" line items to Shipment Status Code 1, "Offered to Transportation", and record the date offered.

c. Provide the Shipment Status Cards to the requisitioner or supplementary address and Service/agency when required, for Parcel Post or local pickup shipments. Also provide shipment status cards to the Defense Reutilization and Marketing Service on shipments made to Disposal on a Disposal Turn In Document when the item is pilferable/sensitive or has a line item value of $100 or more.

d. Provide the responsible DSC with a Materiel Release Confirmation Card (AR_) for Parcel Post or local pickup shipments.

e. Provide the necessary reports and Supply Status Cards to the Depot Operations when manual processing is required.

f. Close Parcel Post or local pickup line items in the History File and record pertinent shipment date therein.

g. Process automatic clear parcel post transactions.

ACTIONS/DECISIONS

* If date shipped is earlier than date offered, insert current date shipped field. When date offered and/or date shipped contains all zeros, alphas or blanks, insert current date in date shipped and/or date offered fields. Insert current date in date shipped and/or date offered fields when date exceeds 366. If date offered is greater than current date, insert current date in date offered field.

** When producing AR- documentation if the date shipped is earlier than the date offered, insert the current date in the date shipped columns.

ACTIONS/DECISIONS

* When producing AS8 documentation, if the date shipped is earlier than the date offered, insert the current date in the date shipped columns.

** DAAS will convert the AS8 to the appropriate AS1, AS2 or AS3 transaction and make distribution to the correct recipient.

d. Appendix E-128 P, Government Bill of Lading Closeout/MRO Force Close Cards

e. Appendix E-128 V, Government Bill of Lading Closeout/MRO Force Closeout Card Violations

3. GENERAL

This chart depicts the process by which:

a. GBL Closeout Cards are validated.

b. Shipment Status Codes in the MRO History File is changed to a 3 or 4, as appropriate.

c. MROs/DROs are partially or completely closed from the Shipment Unit File to the History File.

d. Materiel Release Confirmation Cards are generated to the DSC.

e. Shipment Status Cards are provided to the requisitioner, supplementary address, and Service agency, as required. Shipment Status cards are also provided to the Defense Reutilization and Marketing Service on shipments made to Disposal on a Disposal Turn In document when the item is pilferable/sensitive or has a line item value of $100 or more.

f. Status cards and reports are provided to the DS/T when manual processing is required.

g. MROs/DROs are force closed to the History File.

4. OUTPUT

a. Appendix F-18, status card requiring POE in pos. 78-80.

b. Appendix F-85, Violation Printout.

c. Output of card image forwarded through DAAS to applicable recipient:

(1) Appendix B-14, (AR_).

(2) Appendix B-24, (AS_).

(3) Appendix B-94, (AE_).

(4) Appendix B-225, (ARJ, ARK, ARL, AEJ).

APPENDIX D-33

MRO DEPOT PROCESSING TIME ANALYSIS

1. INITIATING ACTION

Receipt of a Materiel Release Order (DIC A5_) except A5J and C5_ and/or an Intransit Data Card (DIC TK4) by the depot.

2. REFERENCES

a. Appendix B-1, Carrier Performance and MRO Depot Time Analysis Update.

b. Appendix B-66, Table 19, Depot Processing Time Analysis.

c. Appendix E-259, MRO Depot Processing Time Analysis.

d. Appendix E-234P, Part A, MOFAST Special Processing MOWASP Update.

e. Appendix F-61, MRO Depot Processing Time Analysis.

3. GENERAL

a. This action/decision chart depicts the processing of Intransit Data Cards (DIC TK4) and the production of the F-61 Report in 13 parts.

b. DIC TK4s are received via AUTODIN from Defense Automated Address Service (DAAS), at Defense Depot Tracy, California (DDTC), and in the form of manual input, or corrections, of previously rejected DIC TK4s. From that point on, the program:

(1) Validates Ship Date and Delivery Date. A listing is prepared of all transactions rejected (F-61, Part 1, Invalid TK4 List).

(2) The Standard Carrier File is then brought on-line, and the Standard Carrier Alpha Codes (SCAC) are validated.

(a) If valid, the transaction continues processing.

(b) If not valid, the transaction is rejected with the message "SCAC entry is not in file", and continues processing. It will be added to the Invalid TK4 List when all validation is completed.

(3) The Address File is brought on-line, and the DoDAAC of the Consignee is validated.

(a) If valid, the transaction continues processing.

(b) If not valid, the transaction is rejected with the message "Consignee DoDAAC not in Address File", and continues processing. It will be added to the Invalid TK4 List when all validation is completed.

(4) Then the MRO History is brought on-line, and the Delivery Dates are compared to Ship Date.

(a) If the Delivery Date exceeds the Ship Date by more than 45 days, the transaction is added to the Invalid TK4 List.

(b) The valid DIC TK4s are matched to the MRO History and continue processing.

(c) If the DIC TK4 is for the 45-day period involved, but there is no matching GBL History record, the DIC TK4 will be dropped from the system.

(d) If the DIC TK4 has a shipment date greater than the current reporting period, the DIC TK4 will go to the Recycle Holding File for the next cycle.

(5) At the same time, a listing is prepared of shipments made during the 45-day period for which no DIC TK4s have been received (F-61, Part 2, TK4s Not Received).

(6) The DIC TK4 is then checked for a duplicate GBL. If a duplicate is found, the last transaction entered in the system is accepted and the other is replaced/overlaid.

(7) The Shipped Date is checked in the MRO History to see if it is within the 45-day report period. If not, it is passed over.

(8) All valid transactions are then put in Government Bill of Lading (GBL) sequence, and the TK4 Received Listing is prepared (F-61, Part 3).

(9) Then all valid transactions are sorted into IPG, Geographic Area, Subarea, Destination, and Mode Group sequence, and listings are prepared by IPG.

(a) F-61, Part 4, (IPG I Review).

(b) F-61, Part 5, (IPG II Review).

(c) F-61, Part 6, (IPG III Review).

(10) Based on MRO History data and Late Codes therein, a check is made for any late shipments in any categories. If any were made, the following listings are prepared.

(a) F-61, Part 7 (Review of All IPG Late Shipments).

(b) F-61, Part 11 (IPG III Late Line Summary).

(c) F-61, Part 12 (Summary of IPG III Late Lines by Day Over 21).

(11) All valid transactions are then sorted into Geographic Area and Mode of Shipment Code sequence. By calculating average Hold and Transit times, the following reports are prepared:

(a) F-61, Part 13A (Depot Standards Table, Appendix B-66, Table 19).

(b) F-61, Part 13B (Summary of IPG III Late by Depot Standards).

(12) All valid transactions are then sorted into Geographic Area and IPG sequence, and the following reports are prepared:

(a) F-61, Part 8 (Percent of Lines On Time Summary).

(b) F-61, Part 9 (IPG III Average Processing Time by Geographic Area).

(c) F-61, Part 10 (IPG III MRO Processing Performance Analysis).

INVENTORY ANALYSIS REQUEST CARD

1. INITIATING ACTION

An Inventory Analysis Request Card, appendix B-132, input to the computer will produce the Locator Inventory Analysis Report, appendix F-8.

2. REFERENCES

a. Appendix B-132, Inventory Analysis Request Card.

b. Appendix E-132 P, Procedures for Preparation of Inventory Analysis Request Card.

3. GENERAL

The Inventory Analysis Request Card, DIC ZEU, will produce the Locator Inventory Analysis Report.

4. OUTPUT

Appendix F-8, Locator Inventory Analysis Report.

APPENDIX D-36

STORAGE ITEM CHANGE CARD

1. DOCUMENT IDENTIFIER CODES

CMR, CML, CMM, CMD, and CMC, appendix B-23.

2. REFERENCES

a. Appendix B-23, Storage Item Change Card.

b. Appendix B-26, Physical Inventory Request Card.

c. Appendix C-104, Storage Location Identification Label.

d. Appendix F-81, Multiple Location Listing.

e. Appendix F-82, Storage Item Change Listing.

3. These cards are utilized with DICs and Phrase Codes to update the Item Locator Record, its subrecord, and the Classification Suspense File to provide output for remarking and manual updating of locator file or reclassification actions.

a. Cards are received from DSCs and stored in the holding file.

b. These charts begin at the point of the predocumentation date and continue until the cards are removed on the effective date.

c. Procedure decision charts applicable to chapter 5, cover validity checks prior to placement in the Hold File.

d. If NSN, UI, or Manager are to be changed:

(1) Forward transaction to the Depot Balance and Transaction Register Subsystem.

(2) If the Locator Record is flagged for inventory, the inventory will be canceled.

e. The following cards are involved in processing:

(1) CMC.

(2) CMD.

(3) CML.

(4) CMM.

(5) CMR Phrase A.

(6) CMR Phrase C.

(7) CMR Phrase D.

f. Changes/updates contained in the following cards will be processed to the Classification Suspense File in addition to the locator update activity.

(1) DIC CML - NSN change and logistics transfer.

(2) DIC CMR - Consolidate (NSN change).

(3) DIC CMC - (UI only) Data change other than NSN.

g. Violation procedures are covered in chapter 5.

4. OUTPUT

a. Appendix B-26, Physical Inventory Request Card.

b. Appendix B-136, Data Bank Transaction Card.

c. Appendix B-139, Data Bank Deletion Card.

d. Appendix C-104, Storage Location Identification Label.

e. Appendix F-28, Delinquent Deleted Item Report.

f. Appendix F-81, Multiple Location Listing.

g. Appendix F-82, Storage Item Change Listing.

* At DGSC C-104 label will be suppressed for DISARS controlled locations. A DISARS control document (DCD) will be used instead for these locations and processed IAW DISARS operating procedures.

APPENDIX D-39

SURVEILLANCE INSPECTION/OPERATIONAL TEST NOTICE CARD (INSPECTION TEST CARD)

1. INITIATING ACTION

The Surveillance Inspection/Operational Test Notice Card is produced with the Inspection Schedule, Shelf-Life Items, appendix F-20.

2. REFERENCES

a. Chapter 66, Stock Locator System.

b. Chapter 70, Storage Surveillance.

c. Appendix B-116, Surveillance Inspection/Operational Test Notice Card.

d. Appendix C-54, Surveillance Inspection Test Notice Card.

e. Appendix D-2, Preparation of Inspection Schedules - Shelf-Life Items.

f. Appendix E-019 P, Procedures for Inspection Schedules - Shelf-Life and Nonshelf-Life Items.

g. Appendix E-116 P, Procedures for Surveillance Inspection/Operational Test Notice Card.

h. Appendix E-116 V, Procedures for Surveillance Inspection/Operational Test Notice Card Violation.

i. Appendix F-20, Inspection Schedules - Shelf-Life Items.

3. GENERAL

The Inspection Test Card, DIC ZCO, is produced for those items due to undergo surveillance inspection during the current month. These cards are used to update the Locator File with the results of the completed inspections.

4. OUTPUT

a. Appendix B-22, Materiel Adjustment Document.

b. Appendix B-116, Surveillance Inspection/Operational Test Notice Card.

c. Appendix C-104, Storage Location Identification Label.

d. Appendix F-85, Validation Reject Report.

APPENDIX D-40

CLASSIFICATION SUSPENSE DELETE CARD

1. DOCUMENT IDENTIFIER CODE

Appendix B-74, Classification Suspense Delete Card Entries, ZHW.

2. REFERENCES

a. Appendix D-39.

b. Appendix D-69.

c. Appendix D-70.

d. Chapter 61, Violation Control File.

3. GENERAL

a. This appendix provides a means of deleting an entire Classification Suspense Record or decreasing the quantity on the Classification Suspense Record.

b. This action would be initiated when an item or a portion of that item in Classification Suspense (Conditions J, K, or L) was shipped or disposed of without changing the condition.

c. Location will be entered in pos. 45-56 to delete an entry in Classification Suspense File that was established through ZCO action.

4. OUTPUT

Appendix F-85, Violation Printout.

* If cc 45-56 is filled, match in Location Code.
If cc 30-44 is filled, match NSN, Document Number, and CLIN.

APPENDIX D-41

MATERIEL RELEASE ORDERS VALIDATION

1. INITIATING ACTION

Receipt of Materiel Release Orders by the depot.

2. REFERENCES

a. Appendix B-7, Materiel Release Order Card.

b. Appendix B-192, Redistribution Order.

c. Appendix D-27, Workload Release.

d. Appendix D-98, Shipment Unit and Documentation Process.

e. Appendix D-120, Direct Commissary Support System.

f. Appendix E-001 P, MROs Received by Telephone, Message, Pilot Pickup and/or Hand Carried.

g. Appendix E-007 P, Procedures for Processing Exception MROs.

3. GENERAL

a. Issue transactions originated by the cognizant DSC/ICP in accordance with Volumes I and II of DLAM 4140.2 are forwarded to the distribution depot via AUTODIN as MROs, appendix B-7, B-192 and received directly into the computer.

b. Upon passing the validation checks, the MRO is entered in the Cumulative Register where the information is available for inquiry. MROs are then checked for Special Project Code and priority and forwarded for further processing in accordance with appendix D-98, Shipment Units and Documentation Process or appendix D-27, Workload Release Process. SEAVAN eligible MROs are forwarded to the Automated SEAVAN Shipment Planning module for further processing.

c. An MRO may be input by the depot through the Office of Data Systems.

4. OUTPUT

a. Appendix B-94, Supply Status Card.

b. Appendix F-12, Transactions Rejected to DSC.

Y
N
Does MSO location group code match SEAVAN eligible location group codes, Table 14
Y
N
15
Record in history file and merge MSOs into workload bank.
D-27

ACTIONS/DECISIONS

Provide MRO and the following data to the Automated SEAVAN Shipment Planning Module (ASSP)

- Shelf Life Code
- Destination AAC
- Consignee Code
- Booking Group
- Stop Number
- Transit Time
- DICOMSS Bank Code
- Water Commodity Code
- Special Requirements Code
- Line Item Weight
- Line Item Cube
- Unit Pack
- Location Group Code (1 position)
- Compatibility Code
- Water POD
- Type Item Code
- Materiel Locations (3)
- Hazardous Materiel Description
- DD 1348-1 Sequence
- DD 1387/674 Sequence
- Mandatory Date to Transportation (MDT)
- Date Received
- F-096 Indicator
- Nomenclature (DICOMSS 50 positions other than 9 positions)
- NMFC and Suffix
- Number of Packs
- Loose Issue
- Bin/Bulk Indicator
- Cancel Flag
- Physical Security
- Area Control
- Maximum Vertical
- Sort Group D
- Sort Group E
- Sort Group H
- Sort Group J
- ACB Sort Option
- Missing Locator Data Flag
- Hazardous Storage Compatibility Code
- Project Data
- IPG
- Unit Weight
- Unit Cube
- Storage In-Transit Code

* Mandatory SEAVAN Data Elements:

Locator File

- Water Commodity Code
- Unit Weight
- Unit Cube
- Materiel Location

APPENDIX D-42

LOCATOR FSC CHANGE CARD

1. INITIATING ACTION

Appendix B-112, Locator FSC Change Card, DIC ZUT.

2. REFERENCE

Chapter 66, Stock Locator System.

3. GENERAL

This card is used to change the FSC in the Locator File to the new FSC entered in the card. In the event that an incorrect FSC is added to the Locator Record, this card provides the capability of correcting the FSC.

4. OUTPUT

a. Appendix B-114, Depot Balance/Transaction Register and Locator Data Correction Card.

b. Appendix B-136, Central Data Bank Update.

c. Appendix C-104, Storage Location Identification Document.

d. Appendix F-85, Violation Printout.

* At DOSC C-104 label will be suppressed for DISARS controlled locations. A DISARS control document (DCD) will be used instead for these locations and processed IAW DISARS operating procedures.

APPENDIX D-43

MRO/DRO CANCELLATION PROCESSING

1. DOCUMENT IDENTIFIERS

a. Appendix B-17, AC6, Cancellation Card

b. Appendix B-17, AK6, Followup on Cancellation Request

c. Appendix B-227, ACJ, AKJ, DRO Followup/Cancellation/Followup on Cancellation Card

2. REFERENCES

a. Appendix B-17, MRO Cancellation Card

b. Appendix B-227, DRO Followup/Cancellation/Followup on Cancellation Card

c. Appendix E-005 P, Notice of Cancellation Request Report

3. GENERAL

a. Cancellation Requests are received via AUTODIN directly into the computer.

b. Replies to Cancellation Requests will be mechanically prepared by the computer when sufficient data are available in the Active or History File. If pertinent data are not available in the file, a management report (appendix F-69) is prepared for manual review and preparation of proper input documents.

c. A complete cancellation will transfer the MRO record from the Active to the History File.

4. OUTPUT

a. Appendix B-14, DIC AU_, Materiel Release Confirmation Card

b. Appendix B-81, DIC AG6/AGJ, MRO/DRO Cancellation Request Answer Card (No Record)

c. Appendix B-94, DIC AE6, Supply Status Card (Previous Denial)

d. Appendix B-225, DIC AEJ, Disposal Release Confirmation/Status Card

MATERIEL/DISPOSAL RELEASE ORDER (MRO/DRO) FOLLOWUP (AF6/AFJ)

1. INITIATING ACTION

a. Appendix B-60, Followup Card, DIC AF6

b. Appendix B-227, DRO Followup Card, DIC AFJ

2. REFERENCES

a. Chapter 4, Issue Transactions

b. Appendix E-063 P, Reply to an MRO/DRO Followup

3. GENERAL

Followups are received via AUTODIN directly into the computer.

a. Replies to followups will be mechanically prepared by the computer. When the MRO/DRO has not been shipped, an estimated available date will be furnished. When the MRO/DRO History record is coded DP, a Manual Cancellation Followup List, appendix F-50, will be furnished to Directorate of Storage and Transportation.

b. If no record of the MRO/DRO exists in the Active or History Files, the AF6/AFJ is recycled (IPG I and II, two history cycles; IPG III, five history cycles) and then a reply to the followup is furnished to the initiator with BF in pos. 65-66 (no record of the Materiel Release Order).

c. If record was "force closed" in History File (MRO only), reply is furnished to DSC/ICP with BE in pos. 65-66.

d. DIC AF6 followups with a BE Status Code in pos. 65-66 will force close depot records. Replies will not be furnished to the DSC/ICP.

4. OUTPUT

a. Appendix B-14, DIC AR_, MRO Card (Ship Status)

b. Appendix B-94, DIC AE6, Supply Status Card

c. Appendix B-81, DIC AG6/AGJ, MRO/DRO Cancellation Request Answer Card

d. Appendix B-225, DIC, ARJ, ARK, ARL, AEJ, Disposal Release Confirmation/ Status Card

ACTIONS/DECISIONS

* Estimated Shipping Date will be configured as follows:

a. MDT if MDT is greater than current date.

b. Otherwise:

(1) IPG I and II - Current date plus 2.

(2) IPG III - Current date plus 5.

ACTIONS/DECISIONS

* Estimated Shipping Date will be configured as follows:

a. MDT if MDT is greater than current date.

b. Otherwise:

(1) IPG I and II - Current date plus 2.

(2) IPG III - Current date plus 5.

APPENDIX D-45

PREPOSITIONED MATERIEL RECEIPT CARDS

1. INITIATING ACTION

a. Appendix B-18, Prepositioned Materiel Receipt Card (Procurement Instrument Source), DIC DU_.

b. Appendix B-19, Prepositioned Materiel Receipt Card (Other than Procurement Instrument Source), DIC DW_.

c. Appendix B-35, Prepositioned Materiel Receipt Card (Recoupment from PDO), DIC DWJ.

2. REFERENCES

a. Chapter 3, Processing Receipt Transactions.

b. Appendix A-13, Management Codes.

c. Appendix E-018 V, Processing Prepositioned Materiel Receipt Card Violations.

3. GENERAL

Each valid PMRC establishes a record in the Prepositioned Materiel Receipt File. The Prepositioned Materiel Receipt File is then screened against the Item Locator File to determine if the NSN is in the Locator File. If the NSN is not already in the Locator File, a record is established for the NSN and the Incomplete Item Locator Data Report is produced.

4. OUTPUT

Appendix F-85, Violation Printout.

APPENDIX D-49

MONTHLY SUMMARY OF LATE RECEIPTS

1. INITIATING ACTION

Internal Action (no input).

2. REFERENCES

a. Appendix D-69, Processing of Receipt Confirmation Card.

b. Appendix D-70, Processing of Receipt Stow Notice.

3. GENERAL

As a result of processing under appendices D-69 and D-70, records are added to the Completed Receipt File (CRF). When records added to the CRF identify receipts which have exceeded allowable processing times, they are considered late receipts. For procurement receipts the allowable time is 4 days; for nonprocurement receipts the allowable time is 7 days. Processing time is defined as the difference between the Date Received and the Date the Materiel Receipt Card (MRC) is transmitted to the DSC. All late receipts so defined are counted in the Monthly Summary of Late Receipts (appendix F-248) which is generated from this process.

4. OUTPUT

Appendix F-248, Monthly Summary of Late Receipts.

SOURCE
ACTIONS/DECISIONS

APPENDIX D-50

SHIPMENT UNIT FILE ANALYSIS

1. INITIATING ACTION

There is no input. This function is performed daily as programed.

2. REFERENCE

Chapter 60, Section 9

3. GENERAL

As a result of daily review of the Shipment Unit (SU) File the following actions are taken and reports prepared:

a. When a record has been in the SU File for 355 days, this routine will automatically generate and process a ZBM with Action Code DP. This action will remove the record from the SU File and place it in history. All lines removed from the SU File by this routine will be documented on report F-5, "Automatic DP Actions of MROs in SU File 355 Days".

b. The MRO Status Summary List is produced daily. This procedure outlines the production of appendix F-44 which DS/T will utilize to monitor and control the timeliness of the movement of shipments through the depot. When this report indicates that a particular Warehouse Area is developing late shipments, details as required can be requested and printed out on appendices F-78 and 87.

4. OUTPUT

a. Appendix F-5, Automatic DP Actions of MROs in SU File 355 Days

b. Appendix F-44, MRO Status Summary List

PREPOSITIONED MATERIEL RECEIPT FILE MAINTENANCE AND ACTIVE CONTRACT DATA

1. INITIATING ACTION

None, internal action (no input).

2. REFERENCE

None

3. GENERAL

a. This chart is designed to furnish an outline flow of actions and decisions involved in the maintenance of the Prepositioned Materiel Receipt (PMR) File, and the Active Contract Data.

b. Mechanically, on the second Saturday of each month, the PMR File will be screened in accordance with this appendix, and any record reflecting an Estimated Delivery Date which has been passed by 60 days or more, will be deleted, unless receipt action is in-process.

c. Simultaneously the DSC will take action to furnish new PMRCs, for those line items which are still due, though overdue by 60 days or more.

d. Contract data will also be reviewed. Those records with no open lines or open lines whose corresponding PMR record reflects a Delivery Date which has been passed by 60 days or more will be deleted from the active file. All records for which receipt activity has been recorded will be transferred to history.

COMPLETED RECEIPTS FILE MAINTENANCE

1. INITIATING ACTION

None, Internal Action (No Input).

2. REFERENCE

None

3. GENERAL

a. This chart is designed to furnish an outline flow of actions and decisions involved in the maintenance of the Completed Receipts File, and covers the system requirements for automatic file maintenance of the Completed Receipts File.

b. Automatic mechanical maintenance is performed daily and consists of screening the Completed Receipts File, and deleting any record which has been completed for 90 days or more.

4. OUTPUT

None

SOURCE
ACTIONS/DECISIONS
Comp. Receipts File
On a daily basis mechanically review the Completed Receipts File and delete any record for which 90 days has elapsed since MRC was processed.

APPENDIX D-54

LATE RECEIPT REPORT

1. INITIATING ACTION

Internal Action (no input).

2. REFERENCE

Appendix F-71, Late Receipt Report.

3. GENERAL

a. This chart is designated to furnish an outline flow of actions and decisions involved in the preparation of the Late Receipt Report, appendix F-71.

b. Each working day, all records in the Suspended Receipt File are mechanically reviewed to determine which receipts may be/have been in work process in excess of the processing standards.*

c. A daily listing (part 3) of all receipts awaiting stow notice will be produced by mechanical scan of the Suspended Receipts File. All records in this category will be output according to each records date of receipt and the resultant days in process. In addition, those records having no evidence of receipt activity other than initial A inquiry will be displayed.

4. OUTPUT

Receipt records identified as late/potential late in process will be printed out on a Late Receipt Report, appendix F-71.

*Three days or more for Procurement Receipts. Six days or more for Redistribution Receipts and Customer Returns.

SOURCE
ACTIONS/DECISIONS
Sus. Receipt File
Daily mechanically review the Suspended Receipt File and prepare a Late Receipt Report to include any procurement instrument due-in which has been in suspense three or more workdays and any other than procurement instrument due-in which has been in suspense six or more workdays without the ZV_, ZW_, ZX_ or ZY_ card and Receipt Stow Notice being input. This run is made after daily input of completed receipts. Allowable processing time is computed as current date minus date of receipt of materiel.
F-71 Late Receipt Report Parts 1 and 2
DS/T
Mechanically review all records which have:
1. No recorded Stow Notice.
2. No RCC or Stow Notice.
Accumulate data and output totals by days in process, whether the receipt record is procurement or other, by the 3 digit warehouse area present in the ZV_, ZW_, ZX_ or ZY_ record. Accumulate area (1st position of 3 digit loc. code) totals, and all area totals.

APPENDIX D-58

RECEIPTS PERFORMANCE REPORT

1. INITIATING ACTION

Internal Action (No Input).

2. REFERENCE

Appendix A-1, Document Identifier Codes.

3. GENERAL

a. This chart is designed to furnish an outline flow of actions and decision involved in the preparation of the "daily" and "month-to-date" Receipts Performance Report, appendix F-65, and covers the actions required for preparation of the daily and cumulative (during the month) report on receipts processing performance in terms of days required to process complete receipt action.

b. Daily, all reported receipts are mechanically collected and listed on a two-part report (i.e., current date receipts and current month receipts through current date), in the format of appendix F-65, to provide management with a daily indication of number of line items, units and tons received; and processing time required for each commodity manager, by type of receipt.

c. For purposes of this report, the term "Vendor" is defined as those receipts under DIC D4_; "Redistribution" is defined as those receipts under DIC D6K; "Materiel Returns" is defined as receipts under DIC D6A through D6E and the term "others" is defined as receipts under any DIC in the D6_ Series, not specifically listed above.

4. OUTPUT

Appendix F-65, Receipts Performance Report.

APPENDIX D-60

MATERIEL RECEIPT FOLLOWUP AND REPLY CARDS

1. DOCUMENT IDENTIFIER CODE

Appendix B-59, DICs DXA, DXB, DXC, and DXD, Materiel Receipt Followup and Reply Card.

2. REFERENCES

a. Appendix A-1, Document Identifier Codes.

b. Appendix A-2, Routing Identifier Codes.

c. Appendix A-82, Violation Reason Codes.

d. Appendix F-85, Violation Printout.

3. GENERAL

a. This appendix is designed to furnish an outline flow of the actions and decisions involved in the processing of Materiel Receipt Followup/Reply Cards, by the defense depot, and covers the system requirement for the processing of Materiel Receipt Followup Cards from time of receipt through the validation process; match against the Completed Receipts File, the Prepositioned Materiel Receipt File, and the preparation of a Materiel Receipt Followup Reply. Input documents for this routine are identified by DICs DXA or DXB; output documents are under DICs DXC, DXD, D6_ or D4_.

b. Subsequent to notification of vendor shipment or shipment from redistribution, and the receipt has not been reported by the defense depot, the DSC will mechanically prepare and forward a Materiel Receipt Followup Card in the format of Appendix B-59, under DICs DXA or DXB.

c. The Materiel Receipt Followup Card, DICs DXA or DXB, will be mechanically validated to include:

(1) Routing Identifier Code From (pos. 67-69) - Invalid documents are processed as follows:

(a) When the first three digits of the Document Number Field are SCO, the RIC is mechanically corrected based on a cross-reference to DSC codes.

(b) When the RIC cannot be determined, the Materiel Receipt Followup Card is rejected to the Directorate of Storage and Transportation on the F-85, Violation Printout, code AB for corrective action.

(2) Routing Identifier Code - To (pos. 4-6) - Invalid documents are processed as follows:

(a) When the RIC represents another defense depot, the document is mechanically passed to the proper defense depot.

(b) When the RIC cannot be identified, the Materiel Receipt Followup Card is entered on the Violation Printout, F-85, and assigned Violation Reason Code AC.

(3) National Stock Number (pos. 8-20) - Containing blanks or characters are entered on the Violation Printout, F-85, and assigned Violation Reason Code AY.

(4) Document Number (pos. 30-43) not constructed in accordance with appendix C-2 are entered on the Violation Printout, F-85, and assigned Violation Reason Code AI.

d. Valid Materiel Receipt Followup Cards are matched to the Completed Receipts File.

(1) A duplicate DIC D4_ or D6_ reply will be mechanically prepared and output in the format shown in appendix B-20/B-21, for all records which match the DIC DXA/DXB followups. No further action for the DIC DXA/DXB inputs will be taken.

(2) If no matching Completed Receipt Record is found, the DIC DXA/DXB followups will be passed to the Suspended Receipt File.

e. If the DIC DXB followup matches a Suspended Receipt Record, no further action is taken. However, if the procurement followup, DIC DXA, matches a suspended record, a DIC DXC response with a 997 in the estimated date field, pos. 73-75, will be prepared and automatically forwarded to the DSC, or originator of the followup.

f. When neither the Completed Receipt nor the Suspended Receipt File reflects a matching record, the DIC DXA/DXB followup is passed to the Prepositioned Materiel Receipt (PMR) File.

(1) If the DIC DXA/DXB followups match existing PMR data, DIC's DXC/DXD responses will be automatically prepared. The responses will reflect the Estimated Date of Delivery of the matching PMRs, in pos. 73-75 of the DIC DXC/DXD.

(2) If no matching PMR is obtained, the DIC DXC/DXD response will reflect a 998 in pos. 73-75. This response will indicate no PMR Record. The recipient (DSC) of the DIC DXC/DXD reply will then take action to supply the missing PMR Record.

4. OUTPUT

a. Appendix B-20, Materiel Receipt Card (Procurement Instrument Source).

b. Appendix B-21, Materiel Receipt Card (Other Than Procurement Instrument Source).

c. Appendix B-59, Output to DSCs via AUTODIN, Materiel Receipt Followup Reply.

COMPLETED RECEIPTS FILE CHANGE CARD

1. INITIATING ACTION

The input of a Completed Receipt Change Card, appendix B-106, to the computer.

2. REFERENCES

a. Chapter 3.

b. Appendix A-42.

c. Appendix B-106.

d. Appendix E-106 P.

e. Appendix E-106 V.

3. GENERAL

Maintenance of the Completed Receipts File, using card input in the format of appendix B-106 is performed whenever it is determined that any element of a Completed Receipts File Record (or the record itself) is in error or conveys a false reporting situation. The change card will also change data elements and adjust record status in the corresponding contract data record as necessary. Appendix E-106 P further explains this process.

2. REFERENCES

a. Chapter 3, Processing Receipt Transactions.

b. Chapter 61, Violation Control File.

c. Appendix A-82, Violation Codes.

d. Appendix F-85, Violation Printout.

3. GENERAL

a. Provides for the validation of all Materiel Adjustment Cards, input under DICs DAC/ZAC.

b. Provides a means of deleting an item from the Classification Suspense File when condition changes from D, E, F, G, J, K or L as a result of receipt processing.

c. Provides for reducing the quantity of an item on the Classification Suspense File.

d. Provides a Materiel Adjustment Card (DAC) to the DSC for the quantity of an item being adjusted, not exceeding the quantity shown on the Classification Suspense Record.

e. Rejects the quantity of the item being adjusted, exceeding the quantity recorded on the Classification Suspense Record and provides Violation Printout for the excess quantity.

f. Provides a means of adding an item to the Classification Suspense File when condition of the in-stock materiel must be changed to D, E, F, G, J, K or L.

g. Provides a method initiated by the DSC (DIC DAC) to identify suspended and reclassified receipt reported receipts which were found by the DSC to be in excess of contract specifications.

4. OUTPUT

EXIT
NOTE: Basic Item Locator Record Purge: Basic Locator records are purged from the computer records during the scan of the Item Locator to prepare the F-51 or 52 reports.
a. When the last location is deleted from the Locator Subrecord and no PMR on file, the record is flagged for deletion after 90 days.
b. Prior to flagging the record as indicated above, record will be reviewed and purge date of 360 days will be assigned if shelf life code is other than 0, deletion item flag is recorded or a cross-reference NSN is recorded.
* Compute Popularity Group Code as follows:
NAD = (AD X MD) + CD / 1 + MD
Apply answer to Appendix A-52 for selection of PGC.
NAD = New average demands (becomes average demands for next PGC computation)
AD = Average Demands
MD = Months of Demand (never to exceed 6)
CD = Current Demands
If current demand is positive (not zero), half adjust.
If current demand is zero, no adjustment.
(Half adjust means to round up to the next whole number remainder fraction if calculation if 1/2 or over.)

APPENDIX D-65

DISPOSAL RELEASE ORDERS VALIDATION

1. INITIATING ACTION

Receipt of Disposal Release Orders by the depot.

2. REFERENCES

STORAGE ITEM CHANGE CARD (VALIDATION)

1. INITIATING ACTION

Upon receipt of applicable Storage Item Change Cards from the DSC/ICP.

2. REFERENCES

a. Appendix B-23, Storage Item Change Card

b. Appendix D-36, Storage Item Change Cards

3. GENERAL

This chart illustrates the validation checks to which the various types of Storage Item Change Cards (CMC, CMD, CMM, CML and CMR) are subjected. Those which are accepted after validation are placed in a holding file for continued processing on the documentation date established by each depot as portrayed in appendix D-36. The documentation date will be the date on which all necessary documentation to effect the updating of the Locator File or to take appropriate relabeling, packing and marking actions will be produced. Determination of the documentation date is a depot option.

APPENDIX D-67

TRANSACTIONS RECEIVED BY DEPOT

1. INITIATING ACTION

Any DIC received for processing.

2. REFERENCES

a. Appendix A-83.

b. Appendix F-14.

3. GENERAL

This chart indicates that the count of external transaction received by the depot during a reporting period is accomplished from the Entry System and printed on the F-14 report. The applicable DICs are contained in appendix A-83, "Y" Series Element Identification Codes.

4. OUTPUT

Appendix F-14.

SOURCE
ACTIONS/DECISIONS
Entry System
Count total transactions for Document Identifier Codes related to Y elements reflected in Appendix A-83
F-14 Transactions Received By Depot
DS/T
Records for App. D-71, D-72

APPENDIX D-68

TRANSACTIONS FORWARDED BY DEPOT

1. INITIATING ACTION

Any DIC Output for the Exit System.

2. REFERENCES

a. Appendix A-83.

b. Appendix F-15.

3. GENERAL

This chart indicates that the count of transactions forwarded by the depot during a reporting period is accomplished from the Exit System and printed on the F-15 report. The applicable DICs are contained in appendix A-83, "Z" Series Element Identification Codes.

4. OUTPUT

Appendix F-15.

SOURCE
ACTIONS/DECISIONS
Exit System
Count total transactions for Document Identifier Codes related to Z elements reflected in Appendix A-83
F-15 Transactions Forwarded by Depot
DS/T
Records from D-73 and D-75

APPENDIX D-69

RECEIPT CONFIRMATION CARD

1. INITIATING ACTIONS

a. Appendix B-108, Short Form Receipt Confirmation (Due-In), DIC ZV_ (Procurement) or ZW_(Other).

b. Appendix B-109, Long Form Receipt Confirmation (Not Due-In), DIC ZX_ (Procurement) or ZY_(Other).

2. REFERENCES

a. Chapter 3.

b. Appendix B-20.

c. Appendix B-21.

d. Appendix B-22.

e. Appendix B-108.

g. Appendix B-134.

h. Appendix E-108 P.

i. Appendix E-108 V.

j. Appendix F-85.

k. Appendix F-204.

3. GENERAL

a. This chart depicts the computer processing of Receipt Confirmation Cards (RCCs) prepared from the manually annotated Receipt Control document.

b. The entry of the RCC updates the Suspended Receipt File. If a Receipt Notice (appendix B-46 or B-144) has also been processed. Processing of the RCC will cause the Materiel Receipt Card (MRC) to be output to the DSC, the PMR and Completed Receipt Files to be updated, and MIS information to be recorded. When applicable, a Locator update (adding a new location), a Classification Suspense File update, an Inventory Document Control File update, and an Acceptance Report will be processed.

c. Violation correction procedures are provided in appendix E-108 V.

4. OUTPUT

a. Appendix B-20, Materiel Receipt Card (Procurement Instrument Source).

b. Appendix B-21, Materiel Receipt Card (Other than Procurement Instrument Source).

c. Appendix B-22, Materiel Adjustment Document (Single or Dual Adjustment).

d. Appendix B-134, Acceptance Report.

e. Appendix F-85, Validation Reject Report.

f. Appendix F-204, Acceptance Action Report.

g. Internal Locator update in the format of appendix B-71.

h. Internal Classification Suspense File update.

i. Internal Inventory Document Control File update.

APPENDIX D-71

COMMUNICATION VALIDATION

1. INITIATING ACTION

The receipt of AUTODIN messages on magnetic tape from the local AUTODIN Terminal.

2. REFERENCES

a. Volume III, Part 1, Chapter 65, Section 3, MOWASP Entry-Exit System Processing

b. Appendix E-146 P, Communication Rejects Listing, appendix F-116

3. GENERAL

The process depicted by this Procedure Decision Chart represents the document validation performed on input AUTODIN messages by the MOWASP Entry system. This process precludes invalid and misaddressed AUTODIN messages from entering the Entry Process and Control routine depicted by appendix D-72.

4. OUTPUT

Communication Reject Listing, appendix F-116, and related punched cards.

AUTODIN Tape
Receive Header History File
Record input AUTODIN message in temporary storage file for validation
Is security sentinel or redundancy "U" other than "U" (unclass) or "P" (FOUO)
Y
N
Print notice on console "SUSPECTED CLASSIFIED MESSAGE ON TAPE - NOTIFY PROPERLY CLEARED PERSONNEL IMMEDIATELY"
Output incoming AUTODIN MSG header record with MSG "SUS CLASS MSG - CONSOLE MSG PRTD"
Bypass input AUTODIN message and continue processing (inquiry to received message history tape. DIC ZZb, Appendices B-87, D-77 and E-146 P used to punch questionable message from AUTODIN tape by the "Properly Cleared Person")

F-116 Communication Reject List
Communications Operations
Strip Header & EOT Format - Place INF (Information) Header with input AUTODIN msg.
Place Header Format in Rec'd Header History File for use in monthly communication traffic analysis and future duplicate AUTODIN message checks
Header History File
Record INF Header and incoming AUTODIN msg in Valid Communication Records (see Appendix D-72) for entry processing
To D-72

APPENDIX D-72

ENTRY PROCESS AND CONTROL

1. INITIATING ACTIONS

a. Input records from the SAMMS Exit process at DSCs with collocated storage activities.

b. Input records over card reading devices.

c. Input records over teleprocessing (remote devices).

d. Input records from Sequential Peripheral Operations on Line (SPOOL).

e. Input records from the Communications Validation process (appendix D-71).

f. Input records from MOHAWK Created tape.

2. REFERENCE

Volume III, Part 1, Chapter 65, Section 3, MOWASP Entry-Exit System Processing

3. GENERAL

The process depicted by this Procedure Decision Chart represents the receipt and control of all documents into the MOWASP System. The primary functions of this process are to ensure acceptance only of documents which can be identified and which are intended for the processing defense depot; assignments of all valid input documents to the correct processing routines (i.e., Working Data Sets); the preparation of backup records for use in reloading Working Data Sets, when required; process output documents valid to the activity (but not to MOWASP) in an appropriate medium for the addressee; identify and pass certain types of documents to the Exit Subsystem for further processsing; and provide system document counts for MIS and internal control.

4. OUTPUT

CYCLIC EXIT

1. INITIATING ACTIONS

a. Output records from the Entry-to-Exit Working Data Set, (appendix D-72).

b. Output records from Operational Working Data Sets.

c. Output records from Sequential Peripheral Operations on Line (SPOOL).

2. REFERENCE

Volume III, Part 1, Chapter 65, Section 3, MOWASP Entry-Exit System Processing

3. GENERAL

a. The process depicted in this Procedure Decision Chart represents providing a common facility for all MOWASP Subsystems to route data out of the system and utilizing the Exit Document Control Table (DCT).

b. This process will identify DAAS applicable data and Non-DAAS data and extract data for collocated DSC/SAMMS.

c. Invalid documents and local data will be output to appendix D-75.

4. OUTPUT

a. Narrative Exception Message List. Messages are to be manually transmitted by the Data Communication Center.

b. Mailing Addresses to be printed on labels or envelopes for mailing cards from the F-115 report.

INQUIRY TO RECEIVED AUTODIN MESSAGE HISTORY TAPE

1. INITIATING ACTION

Input Message Inquiry Card, DIC ZZB, appendix B-87.

2. REFERENCES

a. Volume III, Part 1, Chapter 65, Section 3, MOWASP Entry-Exit System Processing

b. Appendix E-146 P, Communication Rejects Listing

c. Appendix E-147 P, Inquiries to the Received/Transmitted AUTODIN Message History Tape

3. GENERAL

a. The process represented in this Procedure Decision Chart depicts the flow process of inquiries into the Received AUTODIN Message History Tape.

b. This inquiry action may not be input directly into computer processing since the Message History Tapes are stored in the tape library; must be located and mounted on the computer and the inquiry card input as a separate action.

4. OUTPUT

a. Printed (and related punched cards) AUTODIN Message (no F appendix).

b. "Not Found" Messages typed on computer console.

*Log messages found/not found on console.

APPENDIX D-78

INQUIRY TO TRANSMITTED AUTODIN MESSAGE HISTORY TAPE

2. REFERENCES

a. Volume III, Part 1, Chapter 65, Section 3, MOWASP Entry-Exit System Processing

b. Appendix E-147 P, Inquiries to the Received/Transmitted AUTODIN Message History Tape

3. GENERAL

a. The process represented in this Procedure Decision Chart depicts the flow process of inquiries into the Transmitted AUTODIN Message History Tape.

b. This inquiry action may not be input directly into computer processing since the Message History Tapes are stored in the tape library; must be located and mounted on the computer and the inquiry card input as a separate action.

4. OUTPUT

a. Printed (and related punched cards) AUTODIN Message (no F appendix) for manual use.

b. Printed (and related punched cards) AUTODIN Message (no F appendix) for retransmission.

c. "Not found" Messages typed on computer console.

NOTE: Console operator obtains appropriate transmitted msg tape from Tape Library History File

APPENDIX D-79

INQUIRY TO RECEIVED/TRANSMITTED HEADER HISTORY FILE

1. INITIATING ACTION

Input Inquiries typed in over computer console.

2. REFERENCE

Volume III, Part 1, Chapter 65, Section 3, MOWASP Entry-Exit System Processing

3. GENERAL

a. The process represented in this Procedure Decision Chart depicts the flow of inquiries into the Received/Transmitted Header History Files to include the "adding" of records to the files from sources other than AUTODIN tapes.

b. This process is executed on a "type in - type out" basis.

4. OUTPUT

Console messages reflecting the "found" Header Records or a statement indicating the queried Header History Record was not found.

APPENDIX D-82

SUMMARY STORAGE LOCATION ANALYSIS REPORT

1. INITIATING ACTION

None.

2. REFERENCE

Appendix F-56, Summary Storage Location Analysis Report.

3. GENERAL

This chart indicates the program logic for the Summary Storage Location Analysis Report, appendix F-56. Data for output include:

a. Warehouse locations.

b. Type of Storage Codes.

c. Number of obligated locations.

d. Number of reserved locations.

e. Number of unobligated locations (Bin Only).

f. Totals by warehouse location.

g. Grand Totals by type of location.

h. Violation procedures do not apply to this report.

APPENDIX D-83

LOCATOR MANAGER SCAN

1. INITIATING ACTION

Output records from the input transactions to Locator Update Section.

2. REFERENCES

a. Appendix D-9.

b. Appendix D-15.

c. Appendix D-17.

d. Appendix D-18.

e. Appendix D-39.

f. Appendix D-45.

3. GENERAL

a. The process depicted in this chart represents the decisions made upon termination of processing one or several transactions to update the Locator File. Once the locator record is updated with all input transactions, the logical decisions depicted in this chart are made to determine whether there is a requirement to furnish:

(1) Incomplete Locator Data Report (F-34) on items specifically identified as non-DLA.

(2) Missing Data Elements Report (F-86) to prime depot.

(3) Update transactions to Data Bank (CBB-U).

(4) Inquiry to Data Bank (CBE-P).

(5) DLA Manager on locator not correct (F-59).

b. Tags used in process.

(1) Loc - Prime

0 - Unknown
1 - Prime-DLA
5 - User-DLA
9 - Non-DLA

(2) Loc - Inquiry

0 - No Inquiry
1 - Check Inquiry
5 - Mandatory Inquiry
7 - Demand from Data Bank
9 - Inquiry to Data Bank Pending

4. OUTPUTS

APPENDIX D-84

IN-THE-CLEAR SHIP TO ADDRESSES

1. INITIATING ACTION

Internal Action (No Input).

2. REFERENCES

a. Chapter 2, Section III.

b. Chapter 18, Sections II and III.

c. Chapter 60, Sections V and VII.

d. Appendix D-98, Shipment Unit and Documentation Process.

3. GENERAL

This chart depicts the process of selecting an In-the-Clear Address from the Address File based on selected field positions in the requisition. This covers both normal and MAP MROs. If a match is not found in the Address File, MROs are processed as "No Address" MROs.

4. OUTPUT

Internal action (no output), address In-the-Clear appears on the DD Form 1348-1 label portion on the SPWs and DD Form 1387-1, Military Shipment Label Stencil. If the Mode Restriction flag is equal to 1, 5, A, or B TAC 1 is suppressed from printing on the applicable DD Form 1348-1.

• Builds unique MAPACs not in DoD 4000.25-8-M (MAPAD) to allow for maintenance of addresses based on priority as required by special instruction in the MAPAD. These FMS MAPACS are not maintained by DAAS. Local depots must maintain all TAC addresses for pri 9 15 under the original MAPACs (DSR003, DSR004, DSR008 and DSR009). TAC addresses for pri 1-8 must be maintained under the "unique" MAPACs (DSR013, DSR014, DSR018 and DSR019). Maintenance input in accordance with Appendix B-127 and E-129P.

APPENDIX D-85

REJECTED INPUT FROM CENTRAL DATA BANK

1. INITIATING ACTION

Receipt of DAAS inquiries, and rejected MOWASP Data Bank Transactions, Inquiries and Deletions by the Depot.

2. REFERENCES

a. Appendix A-82, Violation Reason Codes.

b. Appendix B-136, MOWASP Data Bank Transaction.

c. Appendix B-138, MOWASP Data Bank Inquiry.

d. Appendix B-139, MOWASP Data Bank Deletion.

e. Appendix B-141, DAAS Inquiry Reply.

3. GENERAL

The process depicted in the Procedure Decision Chart represents the decisions made at a distribution depot upon receipt of a transaction originally forwarded from MOWASP to the Data Bank, which the Data Bank found invalid in one or more fields. An exception to this is the rejected CBE - Action Code P, with a violation code indicating that the item is not DLA-managed.

4. OUTPUT

a. Appendix F-37, Locator Record Print.

b. Appendix F-82.

c. Appendix F-85, Validation Reject Report.

APPENDIX D-86

INQUIRY TO LOCATOR FOR REWAREHOUSING CARDS

1. INITIATING ACTION

Appendix B-89, Rewarehousing Card Request, DIC ZUK.

2. REFERENCES

a. Chapter 66, Stock Location System.

b. Appendix A-42, Action Codes.

c. Appendix B-89, Rewarehousing Request Card.

d. Appendix E-100 P, Procedures for Preparation of Request for Rewarehousing Cards.

e. Appendix E-100 V, Procedures for Processing Rewarehousing Card Request Violations.

f. Appendix F-85, Validation Reject.

3. GENERAL

This procedure decision chart depicts the validation and processing of requests for Rewarehousing cards. This action will cause the Locator File to be scanned and a Rewarehousing card produced for each location in the file (to include reserved locations). Based on the Action Code (appendix A-42) a printout will also be provided in selected sequence.

4. OUTPUT

a. Appendix B-72, Rewarehousing Card.

b. Appendix F-23, Locator Record Print, Rewarehousing Inquiry.

c. Appendix F-30, Locator Record Print - Reply to Rewarehousing Request.

APPENDIX D-88

INVENTORY COUNT ADJUSTMENTS VIA TELEPROCESSOR

1. INITIATING ACTION

Input of keying code via teleprocessor (remote) appendix E-190 P.

2. REFERENCES

a. Appendix A-86, Teleprocessing Option Codes.

b. Appendix E-190 P, Procedure for Processing Count Adjustments via the Teleprocessing System.

3. GENERAL

This action will display to the Inventory Monitor for immediate update, the inventory counts that do not meet the programed acceptance criteria. All manual reconciliation of inventory counts and infloat documentation is eliminated. After review of data displayed on CRT screen, selected Option Codes (appendix A-86) will be entered which will direct the next computer action. Action reflected by appendix D-89 is the same as this process except it is run in the daily batch cycle.

4. OUTPUT

a. Appendix B-25, Physical Inventory Count Cards (DKA) to DSCs.

b. Appendix B-25, Physical Inventory Count Cards (ZKA) to Depots.

c. Appendix F-7, Discrepancy Evaluation Listing (hard copy).

d. Discrepancy data for inventory counts via CRT screen.

APPENDIX D-89

PROCESSING INVENTORY COUNT ADJUSTMENTS VIA BATCH PROCESSING

1. INITIATING ACTION

No input, this function is performed daily as programed and also if actions from appendix D-10 were input to batch processing in lieu of teleprocessor.

2. REFERENCE

Appendix D-88, Processing Inventory Count Adjustments via the Teleprocessor

3. GENERAL

This action reflects the adjustments to Inventory Counts and related functions that do not require processing through the teleprocessor on a real time basis. In addition, the adjustment function will be performed when the count cards are entered into the batch process in lieu of the teleprocessor. All output which exceeds the limits of the teleprocessor will be generated by this appendix. Options to accept or reject count totals can only be entered through the teleprocessor.

4. OUTPUT

a. Appendix B-25, Physical Inventory Count Card

(1) Summarized counts for DLA managed items will be output directly to the DSC.

(2) Summarized counts for non-DLA managed items will be output as hard cards for mailing to the appropriate ICP.

b. Appendix B-33, Deleted Item Report and Reply Card

DOCUMENT MODIFIER CARD

1. INITIATING ACTION

Receipt of Document Modifier by the depot.

2. REFERENCES

a. Appendix B-4, Document Modifier Card.

b. Appendix E-149 V, Procedures for Processing Document Modifier Card Violations.

3. GENERAL

a. Materiel Release Order Modifiers originated by the cognizant DSC/ICP in accordance with Volumes I and II of DLAM 4140.2 are forwarded to the distribution depot via AUTODIN as Document Modifiers, appendix B-4, and received directly into the computer.

b. Upon passing the validation checks, the modifier processes as follows:

(1) The original MRO is still held in the MRO Bank record, overlay the Media and Status Code (pos. 7), Supplementary Address (pos. 45-50), Country FMS Offer/Release Option Code (pos. 45), Freight Fowarded (pos. 47 FMS Requisition), Signal Code (pos.51), Fund Code (pos. 52-53), Distribution Code (pos. 54), Project Code (pos. 57-59), Priority Designator Code (pos. 60-61), Required Delivery Date (pos. 62-64), Advice Code (pos. 65-66) from the Document Modifier onto the MRO Bank record and make modifications of the record in the MRO History File.

(2) The original MRO has been output for shipment processing or shipped, overlay the Media and Status Code (pos. 7) and Distribution Code (pos. 54) and RDD from the Document Modifier onto the Shipment Unit File and the Cumulative Register/MRO History File.

4. OUTPUT

APPENDIX D-91

INVENTORY HISTORY

1. INITIATING ACTIONS

a. Internal actions from other inventory programs.

b. Input of ZAT card requesting inventory history printout.

2. REFERENCES

a. All internal inventory program.

b. Appendix B-96

3. GENERAL

This chart reflects the action necessary to establish an Inventory History File and by input of a card IAW appendix B-96 a printout of listing data will be made available. Each month a listing/microfiche will be prepared reflecting all inventory history for all inventories which were completed the previous month. Inventory history will be purged and dropped at this time, except count information only for inventories with major discrepancies (variance $800.00 or over) and inventories for items that are critical/sensitive (Inventory Category Code E or U) will be retained on the Inventory History File until the item is next inventoried. When the item is next inventoried the count information will be purged and dropped. A report of Sample Inventory Analysis and a report comparing results of first, second, third counts, and strike balances are also generated from the program. Sample Inventory Analysis (appendix F-102) will classify discrepancy in counts as to major or minor for review and gathering of supporting data to be used if and when the Accountable Officer requests a complete inventory. The report (appendix F-110) comparing differences in count will reflect the accuracy of counters in taking of physical counts.

4. OUTPUT

a. Appendix F-98, Part 1, Inventory History Printout

b. Appendix F-98, Part 2, Inventory History Printout (Purged)

c. Appendix F-102, Sample Inventory Analysis

d. Appendix F-110, Inventory Count Comparison

* D-88-89

**1. The following records will be retained for all inventories: Counts, center strike balances, variance amount records, and all transactions (receipts/MRO's) which were controlled during the inventory. The Inventory History File will be purged monthly for all inventories which were completed the previous month (see note). The purged data will be printed as F-98, Part II.
2. In the event that an inventory is established and later cancelled, the previous inventory cutoff date will be reentered on the locator file.
3. When an NSN is inventoried with multiple conditions and/or types of pack, and any one results in a major discrepancy ($800 or more), counts for all conditions and/or types of pack will be retained until next inventory (see note).
4. When an NSN is inventoried more than once in a month, all inventory history for that NSN will be retained and printed at the appropriate time on the F-98, Part II.

NOTE: Count information for major variance ($800 or more) and any variance if the item is critical/sensitive (Inventory Category Code E or U) will be purged and printed as above with accompanying strike and transaction information, but the count information will also remain in the History File until the next inventory, at which time it will be purged and dropped.

APPENDIX D-92

KEY ESSENTIAL ITEM/DAMAGE ASSESSMENT CARD

1. DOCUMENT IDENTIFIER CODE

Appendix B-104, Key Essential Item/Damage Assessment Card, DIC CZW.

2. REFERENCES

a. DLA War and Emergency Support Plan (WESP)(U)(Classified Secret).

b. DLAR 4140.28, Key Essential Item Status Report.

c. DLAM 4140.2, Volume III, Chapter 19.

3. GENERAL

Monthly, distribution activities receive Key Essential Item/Damage Assessment Cards, appendix B-104, DIC CZW, from DLA Administrative Services Center (DLASC). Cards are to be direct input to the computer for processing. Output is forwarded to the Logistics Readiness Center (LRC) for processing in accordance with reference in paragraph 2c above.

4. OUTPUT

a. Appendix B-104, Key Essential Item/Damage Assessment Card (Header) DIC CZW in NSN sequence.

b. Appendix B-104, Key Essential Item/Damage Assessment Card (Trailer), DIC CZW in location sequence.

c. Appendix F-13, Key Essential Item/Damage Assessment Listing in NSN sequence.

ACTIONS/DECISIONS
MRO History File
BARS Data Tapes (BARS#6)
ZBJ
B-103
Provide inquiry into the BARS data tapes IAW Appendix B-103.
Process all rejects to F-85 IAW current procedures.
Using current BARS#6 tapes provide for inquiry by NSN, Action Code BN, and Popularity Group Code, Action Code BP.
Inquiry by NSN will be limited to 200 in a single run and inquiry by PGC to a maximum of 3.
Accumulate data and prepare F-95 using data collected on current tapes (BARS#6).
F-95 Bin Item Issue Data
DS/T
Using current MRO History File a cumulate and determine issue experience data as follows:
a. Create a monthly file record which will contain all data necessary to prepare the F-95 as follows:
(1) NSN.
(2) PGC by quarter and PGC total annual (cumulative when less than four quarters).
(3) Bin issue quantity by quarter.
(4) Bulk issue quantity by quarter.
(5) Annual demand forecast quantity.
(6) Maximum bin quantity.
b. Accumulate data files with a provision that the most recently completed quarter should be quarter four, with the prior quarters being three, two, and one. When data for quarter four is completed, drop data for the oldest quarter, which is quarter five.
c. Maximum bin quantity should be equal to 180 days of the bin location demand.
d. Do not include DIC C5_ for the report.
Limit NSN inquiry to 200 and PGC to a maximum of 3 in a single run.
F-95 Bin Item Issue Date

c. Appendix E-119 P, Activity Address File Inquiries

3. GENERAL

a. The Activity Address Inquiry, DIC ZAB, provides total file information for a given address. Individual address inquiries may be via remote or keypunched card. The card reply will appear on the F-84, Activity Address File Record Listing, section 1.

b. Destination Cross-Reference Inquiry, DIC ZVN provides a listing/display showing all DoDAACs which contain the input Destination AAC in their DCR field. This input may be via remote or keypunched card. The card reply will appear on the F-84, Activity Address Record Listing, section 5.

c. ZIP Code Inquiry, DIC ZVP, provides a listing of Freight Addresses (TAC 2) of all Destination AAC (Master) records and Activity Address Codes which do not contain a DCR which have matching ZIP Codes. Output will appear on F-84 Activity Address Record Listing, section 6.

4. OUTPUT

a. Appendix F-84, Activity Address Record Listing

o. Appendix F-177, MOFAST Mechanized Center Released MRO Workload Schedule. Used at MOFAST depots only.

p. Appendix F-178, MOFAST Released Workload Warehousing Division. Used at MOFAST depots only.

*Output is optional.

SOURCE	ACTIONS/DECISIONS
D-27	Reselect Warehouse locations for Low Priority MRO IAW App. D-184 → From Tables and Constants pick up warehouse area (stock location group) table, and sequence option code. Assign packing location from pack location assignment Table in T and C. If no matching selection[1] location in table, assign pack location same as selection location. → 1
Input actions are Low Priority MROs (DIC A2-, A5 , C5A C5D, C5E, C5I. C54, C55) and DROS (DIC A5J) selected for documentation on current date.	
D-41 D-108	
Input actions are High Priority MROs (DIC A2 , A5 , except A5J, C5A, C5D, C5E, C51, C54, C55). Input will be all IPG I MROs or all IPG II MROs.	

best copy available

ACTIONS/DECISIONS

1

The following types of Release Orders will be sorted into single line SUs:

a. No location available.

b. ANMCS/NMCS - N or E in cc 62.*

c. NMCS - 999 in cc 62-64 (IPG I). *****

d. Fifth position of water commodity is K, S, or Z for O/S shipments.

e. MROs with 9 overpunch in cc 3.

f. IPE MROs.

g. Special Requirements Code A.

h. Fourth position of water commodity is A, B, D, E, F, G, I, J, K, L, M, O, P, R, S, T, U, V, W, X, Y or N.

i. DROs.

j. Hazardous Storage Compatibility Code is A1.

k. All IPGI MROs in multiple high priority release cycles, when option codes A, B or C are entered in the "priority options for multiline documentation" field of App-B-66D.

l. Line items weighing 10,000 pounds or more.

m. Line item with LTL Code W.

n. Items under inventory. See Appendix B-66D, Inventory Consolidation Option.

All remaining MROs will be consolidated into SUs (not to exceed 9999 lines) when all of the following data elements are equal:

a. PDT.

b. IPG.

(1) IPGs I and II with an A, S or X in cc 62 and DRO's will be in separate SU.

(2) Items of supply with lower priority (TP2) will be consolidated with items of supply with higher priority (TP1) provided it is consistent with existing Service/Agency policy and sound traffic management principles. This consolidation is determined by Service Code on table 04. Appendix B66 Part D (2) (e).

(3) IPG III will be consolidated into the SU.

c. Project Code:

(1) Cc 30 equals N, R, Q, or V and 1st position of project code is other than D or Z.

(2) For other than above cc 30 and cc 57-59 must be equal.

d. Consignee.

e. With the exception of MRO's with other types of special requirements codes may be consolidated with MRO's having the same SCR. Items with SCR J,Z,9,H and Q can be consolidated together. See Appendix B-66D for limitations on including H and Q.

f. Water Commodity Code for O/S only. (Consolidate IAW criteria contained in Water Commodity Group Table, App. C-39. If locator is blank, do not consolidate). Note 1.

g. Warehouse Area (Stock Location Group Code). **

h. fourth position of Water Commodity Code C,H,O,Z.

i. MROs being released from the MRO bank, on a date which is geater than the computed automatic release **** will consolidate with themselves according to normal SU consolidation criteria.

In addition to preceding criteria:

a. FMS documents will be consolidated when cc 30-34, cc 45-50 and cc 57-61 are equal.

b. GRANT AID MROs will be consolidated when cc 30-33, cc 35 and cc 57-61 are equal.

c. On O/S only, consolidate like Air Commodity Codes of 1, 2 or 3 with like Air Commodity Codes.

d. For Multiline shipment units limit the WT and/or cube so not to exceed the limitation set in Table 04 Controls & Constants.

Assign Transportation Unit Number. SU are consolidated into Transportation Units when:

a. DCR is common for CONUS freight shipments.

b. DCR (which contains POE Code) is common for O/S frt.

c. Parcel Post SUs will be separate Transportation Units.

d. SUs with the following unequal special requirements codes will not be consolidated: 3, 4, 5, 6 and N (N applies only on O/S shipments). ***

e. SUs with the following unequal forth position of the Water Commodity Codes will not be consolidated: B, I, J, P, S, and T.

2

* ANMCS/NMCS criteria is applied only to IPG I and II.

** Advice Code RA or RB lines are consolidated with other like coded lines. A2S/A2E, A5S/A5E lines are consolidated only with other A2S, A2E, A5S, A5E lines.

*** Depot option may be applies to cause Code Q to be considered equal to Code Z during warm weather; option input via App. B-66D, Table #4.

**** Automatic Release Date: Date MRO will be forced from the MRO bank based upon optional document release parameters assigned by each depot (reference Area Ship Cycle Table, App. B-66, Table #6.)

***** If 999 in cc 62-64 (IPG I), consigned to Break Bulk Point (BBP) W62N2A and when all compatibility data elements are equal, consolidate into multi line SUs.

ACTIONS/DECISIONS

ACTIONS DECISIONS

ACTIONS/DECISIONS

9

Assign TU and SU numbers to all SU.

Apply batching process to all MROs with Whse Area Code X.**** Apply sorter chute control criteria to establish batch size when data is present in Table and Control File. Assign batching control numbers. Do not assign more than one consolidated SU to a sorter chute when sorter chute control applied. Numbers will be assigned in descending order, SU with largest number of lines will be assigned number one.

Determine Assembly Area for Shipment Unit:

a. Compare Total Weight and Cube for each Shipment Unit with Constants entered in Assembly Area Table.

b. If either of the constants are surpassed, assign the warehouse area code (1st three positions of the prime location) which constitutes the largest percentage of the surpassed constant as the assembly area. If both constants are surpassed, the area contributing the most weight should be used. If two or more areas are exactly equal on weight, select the one with the largest cube.

c. If neither of the constants are surpassed, assign the General Assembly Area from the Assembly Area Table.

Review SU. If 100% of SU line items have prime location in same building, i.e., first two positions of location code, General SU Assembly Area will be supplemented by the printing of the first three positions of the prime location of the line item comprising the greatest weight. This field will be left blank when 100% of the lines are not equal on the first two positions of all prime locations.

Determine Assembly Area for the Transportation Unit.

a. Compare total weight and cube for each transportation unit with constants contained in Assembly Area Table.

b. If the weight limit is surpassed, the TU Assembly Area will be the same as the shipment unit assembly area assigned to the SU.

c. If the Cube limit is surpassed, the TU Assembly Area will be the same as the shipment unit assembly area.

d. If both limits are surpassed, the TU Assembly Area will be the same as the shipment unit assembly area.

e. If neither of the constants are surpassed assign the General Assembly Area from the Assembly Area Table.

Prepare Single Line Item Release/Receipt Doc. with label * (C-11) & Military Shipment Label-Stencil (C-58). Prepare second DD Form 1348-1 (F-2 format) if item is under inventory.

Select Address from DoDAAD if available (D-84). Sequence DD Form 1348-1 in accordance with Sequence Option Code within each stock location group code **. Group output document in accordance with Appendix A-63. Print assembly areas on DD Form 1348-1 and F-039.

10

C-58 DD Form 1387 (Stencil)

APPENDIX D-102

MANAGEMENT INFORMATION SYSTEM REPORT DATA

1. INITIATING ACTION

Monthly, at the end of each month, Management Information System Report Cards, appendix B-95, are punched with depot statistics obtained from the Management Information File and the Receipts Performance File.

2. REFERENCES

a. Chapter 74, Management Information and Reports

b. Appendix A-83, Management Information System Element Number

c. Appendix B-95, Management Information System Report Card

d. Appendix E-036 P, Distribution Depot Operations and Performance Report RCS DLA(M)232(O)MIN

e. Appendix E-114 P, Management Data Report, RCS DLA(M)26(C) MIN

f. Appendix F-9, Management Information System (MIS) Feeder Data

g. Appendix F-65, Receipts Performance

h. Appendix F-99, Management Information System (MIS) Change Card Listings

i. Appendix F-128, Transportation Management Analysis by Mode of Shipment

3. GENERAL

Depot statistics and computations using these statistics are transceived to HQ DLA monthly in ADP cards. Each statistic has been assigned an item number to identify what data element it represents.

4. OUTPUT

a. Appendix B-95, Management Information System Report Card

b. Appendix F-9, Management Information System Feeder Data

MRO STATUS DETAIL REQUEST CARD

1. INITIATING ACTION

Appendix B-58, MRO Status Detail Request Card, DIC ZUG.

2. REFERENCES

a. Chapter 60, Planning and Effecting Shipping Action

b. Appendix F-44, MRO Status Summary Listing

3. GENERAL

This card is input to request detail information concerning warehouse areas which reflect a possible buildup of late shipments as shown on the F-44 report, or concerning shipment units in the In-Process File at MOFAST depots which contain a manually entered date to transportation. Input of this card must be coordinated with ODS.

4. OUTPUT

a. Appendix F-78, MRO Status Detail - Part 1 - Warehouse PDT Control Listing

APPENDIX D-107

RECEIPT DISCREPANCY REPORT

1. INITIATING ACTION

Recording of Receipt Discrepancy Codes in Completed Receipt File Records.

2. REFERENCES

a. Appendix A-26, Receipt and Surveillance Discrepancy Codes.

b. Appendix B-108, Receipt Confirmation Card.

c. Appendix B-109, Receipt Confirmation Card.

d. Appendix D-69, Processing of Receipt Confirmation Card.

e. Appendix D-70, Processing of Receipt Stow Notice.

3. GENERAL

The Receipt Discrepancy Report (appendix F-144) is produced monthly from the Completed Receipt File (CRF). Receipt Discrepancy Codes (appendix A-26) entered in Receipt Confirmation Cards (appendices B-108 and B-109) are perpetuated in the CRF when records are added to this file IAW appendices D-69 and D-70. These codes provide the basis for preparation of the Receipt Discrepancy Report.

4. OUTPUT

Appendix F-144, Receipt Discrepancy Report.

SOURCE

APPENDIX D-108

INDUSTRIAL PLANT EQUIPMENT (IPE) MATERIEL RELEASE ORDER (MRO) VALIDATION

1. INITIATING ACTION

Receipt of IPE MROs by the defense depot authorized to receive, store, and ship IPE.

2. REFERENCES

Appendix B-175, IPE Materiel Release Orders.

3. GENERAL

a. Issue transactions originated by DIPEC are forwarded to defense depots authorized to receive, store, and issue IPE via AUTODIN and are received directly into computer processing. Exception data IPE MROs are forwarded to the Shipping Documentation Branch, Shipping Division, DS/T, with related Exception Data, for control and entry into computer processes.

b. This appendix depicts the mechanical validation check of the mechanical SU File, check of the Project Reference Code Table and assignment to a processing cycle for production of shipping documentation.

4. OUTPUT

a. Appendix B-94, Supply Status Card.

b. Appendix F-85, Validation Reject Report.

APPENDIX D-110

RECONCILIATION - CONVERT DEPOT LOCATOR FILE

1. INITIATING ACTION

Upon entry of the locator dump tape to the reconciliation conversion program.

2. REFERENCE

None

3. GENERAL

The locator dump tape will be saved on the date corresponding to the agreed reconciliation cutoff with the applicable DSC(s). This process will build a short record for each location subrecord on the locator dump tape. The short record will be processed against the DSC(s) asset balance records. During this process, a Pilferable Item File will be produced by generating a record for each National Stock Number having a Physical Security Code other than U or blank. Capability to update this file for next reconciliation process is available through ZBC input to basis locator record.

4. OUTPUT

None

APPENDIX D-115

RECONCILIATION - DUPLICATE DELETE AND DENIAL AND DELETED LOCATION LISTINGS

1. INITIATING ACTION

Upon entry into program of denials and deleted location actions.

2. REFERENCES

a. Appendix B-8.

b. Appendix B-71.

c. Appendix B-158.

3. GENERAL

Program will be run daily. Prior to running program, MRO denials, with Management Code T and Location deletes, must be accumulated for the 24-hour period preceding run. Denial files must be in Stock Number sequence and deleted file must be in Stock Number major Location minor sequence. Matching denials and deleted locations for that Stock Number will be printed out, appendix F-269. Duplicate delete, appendix F-270, will be produced when Stock Number and location are equal, both will be printed on F-270. At the time of match, a new deleted location file will be produced merging new deleted Location records with old deleted Location File. Any old deleted Location records having date greater than 60-days old will be deleted from file. Denial records are purged when 30-days old. F-269 report will also be prepared as a result of input of appendix B-158, DIC ZAF.

4. OUTPUT

a. Appendix F-269.

b. Appendix F-270.

APPENDIX D-117

RECONCILIATION - PILFERABLE ITEM LISTING

1. INITIATING ACTION

Upon completion of Matching and Building Differences File as depicted in appendix D-111 and building of Pilferable Item File as depicted in appendix D-110.

2. REFERENCE

None

3. GENERAL

Center Balance No Location Records and Denial Records will be matched by NSN against Pilferable Item File. Matching NSNs will be printed on F-266 listing along with all deleted locations and inventory date from Locator File, if available.

4. OUTPUT

Appendix F-266

APPENDIX D-118

RECONCILIATION - CENTER BALANCE AND DELETED LOCATION LISTING

1. INITIATING ACTION

Upon entry into program of Center Balance No Location Records, Deleted Location File and Depot Locator File.

2. REFERENCE

None

3. GENERAL

Center Balance No Location Records will be matched by NSN against Deleted Location File. Matching NSNs, Center Balance No Location Record, and all Deleted Location Records will be printed on listing. Inventory date will be taken from Locator File when available.

4. OUTPUT

Appendix F-267

APPENDIX D-119

RECONCILIATION - CENTER BALANCE OR DENIAL AND NEW LOCATION ADD

1. INITIATING ACTION

Upon entry into program of Center Balance No Location Records or Denial Records and accumulated new location adds generated by a Location Survey.

2. REFERENCE

None

3. GENERAL

Center Balance No Location Records and/or Denial Records will be matched against the new Locator Survey Add File by NSN. Matching records, either or both Center Balance No Location and Denials along with all new location add, will be printed on listing. Inventory date from Locator File will be included in listing if available. New add records will not be retained after match.

4. OUTPUT

Appendix F-268

APPENDIX D-120

DIRECT COMMISSARY SUPPORT SYSTEM

1. INITIATING ACTION

Initiation of the monthly commissary requisition cycle and the resultant card formats forwarded to Defense Depots by DPSC.

2. REFERENCES

a. Chapter 20, Direct Commissary Support System (DICOMSS).

b. Appendix A-30, DICOMSS Cycle Codes.

c. Appendix A-31, DICOMSS Type of Item Codes.

d. Appendix B-15, Commissary Support Item Identification Card.

e. Appendix B-16, Commissary Support Planning Card.

f. Appendix B-27, DICOMSS Residual Materiel Card.

g. Appendix E-140 P, Direct Commissary Support System.

3. GENERAL

This appendix depicts the document flow involved in the processing of commissary MROs at defense depots.

4. OUTPUT

a. Appendix F-62, SEAVAN CONSIST.

b. Appendix F-73, Commissary Support Cycle Planning Report.

c. Appendix F-92, Part 4, DICOMSS Residual Materiel Report.

d. Appendix F-104, DICOMSS Locator Update Listing.

APPENDIX D-122

MATERIEL RELEASE ORDERS, DISPOSAL RELEASE ORDERS AND DICOMSS RESIDUAL MATERIEL CARDS TO THE DEPOT BALANCE/TRANSACTION SYSTEM

1. INITIATING ACTIONS

a. Appendix B-7, Materiel Release Order, DIC A5_ (except A5J).

b. Appendix B-27, DICOMSS Residual Materiel Card, DIC CRS.

c. Appendix B-32, Disposal Release Order, DIC A5J.

d. Appendix B-192, Redistribution Order, DIC A2_.

2. REFERENCES

a. Chapter 72.

b. Appendix A-82, Violation Codes.

c. Appendix F-145, Depot Balance and Transaction File Printout.

d. Appendix F-146, Monthly Reconciliation Unmatched Balance/Transactions.

3. GENERAL

a. This action/decision chart depicts the processing of MRO/DRO transactions processed to Depot Balance/Transaction System, from MOWASP System after they have been validated.

b. This action/decision chart also depicts DICOMSS Residual Materiel Cards (DIC CRS) to the DB&TR System to update the Balance and Transaction File. The transaction is processed in accordance with appendix D-56.

c. If there is not a Depot Balance record for NSN of A2_, A5_ input, a Balance record will be created.

d. If the A2_, A5_ causes the balance to go into, or further into, a credit position, an F-145, part 4, for that record will be created.

e. If the A2_, A5_ causes the Balance record to go to zero the record will be flagged awaiting a DIC ZEJ with Action Code KB to process or the Balance to go into a positive position. If a DIC ZEJ with Action Code KB does not process or the balance does not go positive in less than 10 days, the process depicted in appendix D-175 will be followed.

4. OUTPUTS

APPENDIX D-124

INVENTORY ADJUSTMENTS

1. INITIATING ACTIONS

Appendix B-63, DSCs Inventory Adjustment, DICs D8_ and D9_.

2. REFERENCES

a. Chapter 72.

b. Appendix A-82, Violation Codes.

c. Appendix F145, Depot Balance/Transaction Printout.

d. Appendix F-146, Materiel Reconciliatio Unmatched Balance/Transaction.

e. Appendix D-127, Materiel Adjustment Document Depot Balance/Transaction System (appendix B-22).

f. Appendix E-185 V, Violation Report.

3. GENERAL

a. This action/decision chart depicts the processing of Inventory Adjustments generated by DSCs (DICs D8_ and D9_, appendix B-63), Inventory Adjustments generated by depots (DICs D8A, D8C, D8N, D9A, D9C, and D9N).

b. If adjustment is DSC generated and DIC is D9_ and Management Code is Y (clear D4_, "DREG END" pickup and subsequent drop by DSC) adjustment to on-hand balance will not be made.

c. Depot mechanized inventory system will create inventory adjustments (D8A and D9A) for physical inventory counts (DIC DKA) when quantity is less than or greater than DSC inventory strike balance. Inventory adjustments (D8C, D8N, D9C, and D9N) will also be created by Depot Balance/Transaction System for Materiel Adjustment Document (DIC B-22). These inventory adjustments will adjust depot on-hand balance accordingly. (Note: If the type of Inventory Code is E or F, the depot created D8A and D9A will be memo entries only. The corresponding DSC created D8A and D9A transactions will adjust depot on-hand balances accordingly.)

d. DSCs Inventory Adjustments (D8A, D8C, D9A, D9C) will be matched against depot inventory adjustments. If the adjustments cause a credit balance situation or a greater credit balance situation, an F-145, part 4, will be generated to indicate the credit balance condition.

e. If there is not a Depot Balance record for NSN of inventory adjustment, a Balance record will be created. If the record from which the balance was created causes a credit balance or a greater credit balance condition, an F-145, part 4, will be generated.

4. OUTPUT

a. Appendix B-20, Materiel Receipt Card (Procurement Instrument Source), DIC D4_.

b. Appendix B-21, Materiel Receipt Card (other than Procurement Instrument Source), DIC D6_.

c. Appendix B-32, Disposal Release Order.

d. Appendix F-32, Lost Stock Report.

APPENDIX D-125

MATERIEL RELEASE CONFIRMATION, MRO FOLLOWUP REQUEST ANSWER CARD, CANCELLATION REQUEST ANSWER CARD, MATERIEL RELEASE DENIAL AND CLASSIFICATION REPORT CARD, DEPOT BALANCE/TRANSACTION SYSTEM

1. INITIATING ACTIONS

a. Appendix B-8, Materiel Release Denial/Adjustment Card, DIC A6_

b. Appendix B-14, Materiel Release Confirmation Card, DICs ARA and ARB

c. Appendix B-81, MRO/DRO Cancellation Request Answer Card, DIC AG6, AGJ

d. Appendix B-82, Classification Report Card, DIC COB

e. Appendix B-94, MRO Followup Request Answer Card, DIC AE6

f. Appendix B-225, Disposal Release Confirmation/Status Card, DIC ARK, ARL

g. Appendix B-226, Disposal Release Denial/Adjustment Card, DIC A6J

2. REFERENCES

a. Chapter 72

b. Appendix A-82, Violation Codes

c. Appendix F-145, Depot Balance and Transaction File Printout

d. Appendix F-146, Monthly Reconciliation Unmatched Balance/Transaction

e. Appendix E-185 V, Violation Report

3. GENERAL

a. This action/decision chart depicts the processing of ARA, ARB, ARK, ARL, AG6 (Status Code BQ), AE6 (Status Code CB), AGJ, A6_, and COB to Depot Balance/Transaction System from MOWASP System after they have been validated.

b. If there is not a depot balance for NSN of input, indicated in paragraph 3a above, a Balance record will be created.

c. ARA/ARK will decrease on-hand balance by amount of quantity overshipped. If the on-hand balance goes to zero, the record will be flagged awaiting a DIC ZEJ with Action Code KB to process or the balance to go into a positive position. If the DIC ZEJ does not process or the balance does not go positive

in less than 10 days, the process depicted in appendix D-175 will be followed. If the on-hand balance is less than overshipment a credit balance will be generated. When the balance file goes into or further into a credit position, generate an F-145, part 4.

d. ARB/ARL will increase on-hand balance by amount of quantity undershipped.

e. AG6/AGJ/AE6:

(1) An AG6/AGJ which is a non-DICOMSS transaction will increase on-hand balance by amount of quantity confirmed as canceled.

(2) An AG6 or an AE6 which is a DICOMSS transaction will create single materiel adjustment DICs D8N and D9N. (The D9N (From) will decrease the on-hand balance from the current Cycle Code and the D8N (To) will increase the on-hand balance in Cycle Code I by the amount of quantity confirmed as canceled or rejected).

f. A6_ will increase on-hand balance by amount of quantity denied.

g. COB will increase on-hand quantity by amount of quantity classified under the Army Bag Item Program (DPSC).

4. OUTPUT

e. Appendix E-124, Processing Inventory Adjustments.

f. Appendix D-124, Inventory Adjustments.

g. Appendix F-145, Depot Balance and Transaction File Printout.

3. GENERAL

This action/decision chart depicts the process of Materiel Adjustment Cards from MOWASP or a DSC system to Depot Balance/Transaction Register System. The Materiel Adjustment Document (DIC DAC) does not adjust depot on-hand balance quantities. DACs with Condition Code H generate A5J transactions to the next issue cycle (when management code is M or T), or to the DB&TR for quantity adjustments (when management code is E or J). A single Materiel Adjustment Document (DICs D8C and D9C) is generated and processed as outlined by appendix D-124.

4. OUTPUT

a. Appendix B-32, Disposal Release Order Card.

b. Appendix B-63, Balance/Transaction Materiel Adjustment Document (DICs D8C and D9C).

c. Appendix F-85, Validation Reject Report.

2. REFERENCES

a. Chapter 72.

b. Appendix A-82, Violation Codes.

c. Appendix F-145, Depot Balance and Transaction File Printout.

d. Appendix E-185 V, Violation Report.

3. GENERAL

a. This action/decision chart depicts the processing of shipment status, cancellation request, and inventory counts from MOWASP System to the Depot Balance/Transaction System. These actions do not adjust depot on-hand balance quantities.

b. This chart also depicts actions taken upon receipt of DIC DZC cards. When a DIC DZC is received a match will be made with the DB&TR Balance File. A DIC DZC will be automatically created and forwarded with the DB&TR on-hand balance in the Transfer Quantity field. If manager is S or T or it is a classified/sensitive item, a suspense listing will be prepared awaiting manual preparation and input of DIC DZC cards.

4. OUTPUT

a. Appendix F-85, Validation Reject Report.

CATALOG CHANGES

1. INITIATING ACTION

Appendix B-23, Storage Item Change Card, DICs CMC, CMD, CML, CMN, and CMR.

2. REFERENCES

a. Chapter 72

b. Appendix E-185 V, Violation Report

c. Appendix F-145, Depot Balance and Transaction File Printout

3. GENERAL

a. This action/decision chart depicts the process of catalog changes to the Depot Balance/Transaction Register System.

b. Records are received from MOWASP System, after validation, on effective date of changes and update Depot Balance/Transaction Register as follows:

(1) CM_ which changes Physical Security Code from/to J, Q, or R may also cause the Inventory Category Code on the Depot Balance record to change.

(2) CMC will change Depot Balance record unit of issue, indicate effective date of change, and will be processed as a memo transaction. If no change in unit of issue, catalog change date will be reflected which indicates that action was for other than unit of issue change.

(3) CMD will indicate effective date on Balance record and will be processed as a memo transaction. CMD will not purge Depot Balance record, as subsequent disposal action from DSC will bring depot on-hand to zero balance.

(4) CML and CMN will indicate effective date on Balance record and will be processed as memo transaction. Change action will not be taken as assets will be changed by DSCs single materiel adjustment document (DICs D8K and D9K), appendix D-124.

(5) CMR will build Depot Balance record for new NSN and will be processed as memo transaction. The CMR deleted or changed NSN will indicate the new NSN in document number field of F-145 report, with asterisk (*) in suffix field. The CMR for new NSN will indicate deleted or changed NSN in document number field of F-145 report, with no asterisk. Change action will not be taken as assets will be changed by DSCs single materiel adjustment document (DICs D8K and D9K) as outlined by appendix D-124.

4. OUTPUT

z. Appendix D-127, Processing Materiel Adjustment Document, Depot Balance/Transaction System.

aa. Appendix D-128, Processing Shipment Status, Cancellation Request, and Physical Inventory Counts, Depot Balance/Transaction System.

ab. Appendix D-129, Processing Catalog Changes.

ac. Appendix E-184 P, Processing Monthly Reconciliation Unmatched Balance/Transactions.

3. GENERAL

a. This action/decision chart depicts the monthly reconciliation of depot and DSC Balance/Transaction records.

b. The depot cutoff balance and transaction date is established by reviewing DSCs transactions and determining last date of activity. This date is then used for cutoff period.

c. The DSC monthly FAWESP tape balance is matched against depot balance. If out-of-balance exists a match is made of DSC/depot transactions for current cutoff period and processed as follows:

(1) If mismatched transaction is DSC action not on depot transaction record, then match of depot transactions received after cutoff date is accomplished. If depot infloat transaction matches, depot balance is adjusted accordingly, and DSC/depot balances are recompared. If agreement is reached, records are reconsidered as balanced. Out-of-balance transaction records will continue to be processed.

(2) If mismatched transaction is depot action not on DSC transaction record, then match is made with DSCs violation transactions. If transaction is found, depot transaction had not been processed. Balance is adjusted as though

depot balances are recompared, if agreement is reached balance/transaction records are considered as matched. Depot mismatched transactions will be considered in next reconciliation to determine if violation has been cleared by DSC and if balances agree. If balances still disagree and previous violated depot transaction action is still mismatched and not on DSC violation records, the DSC violation code will appear on F-146 report. Those balances that did not match after adjustment will be processed as mismatches. Depot transactions that matched violations will be considered as matched.

(3) If mismatched depot transaction does not match violation file, but activity date is greater than established cutoff date minus three days, the depot balance is adjusted as though depot transaction had not been processed. Balances are recompared, if agreement is reached, records are considered as matched. Depot mismatched transactions which were assumed not processed by DSCs prior to monthend cutoff will be considered in next reconciliation. If depot infloat records match DSC transactions in next reconciliation they will be dropped from processing. If they do not match, they will be considered as previous period mismatched transactions. Those depot balances that did not match after adjustment and transactions will be processed as mismatched.

d. An automatic inquiry for transaction record (DIC ZAN) will be generated for preparation of F-145 report for mismatched balance transaction records.

e. A DSC Balance and Transaction File, report F-148, will be generated for mismatched balance/transaction records.

f. The monthly reconciliation unmatched balance/transaction report F-146, will be generated indicating depot/DSC previous and current mismatch balance and transactions. A summary report will stratify mismatching balances and transactions by type records mismatched.

g. A record of each NSN with a backorder indicator on the DSC monthly FAWESP tape will be forwarded to the receiving process.

4. OUTPUT

a. Appendix F-145, Parts 1 and 2, Depot Balance and Transaction File Printout.

b. Appendix F-146, Monthly Reconciliation Unmatched Balances/Transactions.

APPENDIX D-133

SUPER HIGH PRIORITY MRO PROCESS

1. DOCUMENT IDENTIFIER CODE

None

2. REFERENCE

Appendix D-57

3. GENERAL

a. This process describes the generation of reports required for reviewing Super High Priority MROs - MICAP/NMCS/ANMCS/999 that remain open (not closed in the In-Process File) and shipments that are confirmed (by day). It also generates the monthly summary for total volume of Super High Priority MROs shipped by each DLA Depot.

b. The program will be run on a daily basis for data required in parts 1 and 2. Daily information will be accumulated and retained for monthend processing and generation of part 3.

4. OUTPUT

a. Appendix F-123 - Part 1, Super High Priority MROs - not confirmed

b. Appendix F-123 - Part 2, Super High Priority MROs - shipment confirmed

c. Appendix F-123 - Part 3, Super High Priority MROs - Monthly summary of shipments confirmed

SOURCE
ACTIONS/DECISIONS

APPENDIX D-136

MOFAST GBL RECORD UPDATE
MICROFICHE/MTMC TAPE PREPARATION PROCESS

1. INITIATING ACTION

CRT operator entry of program call number and data elements as specified in appendices B-195 and E-195 P.

2. REFERENCES

a. Chapter 83.

b. Appendix B-195.

c. Appendix D-154.

d. Appendix E-195 P.

3. GENERAL

This appendix describes the processes used to update the GBL record after the GBL print process is complete, reference appendix D-154. Operators can initiate update/corrections of the GBL record for at least 10 days after GBL print prior to preparation of hard copy microfiche record of the GBL. Another by-product at depot option of this process is the MTMC GBL tape record which will be sent weekly to MTMC by Data Systems.

4. OUTPUT

a. GBL corrected/updated data record.

b. Microfiche hard copy GBL record.

c. MTMC GBL tape record.

SOURCE
ACTIONS/DECISIONS
D-154
Initiate GBL update process in accordance with Appendices B-195 and E-195P
Display GBL data page thru to see all data
Manual GBL Correction Data
Input GBL updates/ corrections in accordance with Appendix E-195 P
Update GBL on-line record. Maintain data on-line 10 days minimum
Prepare Weekly GBL microfiche

Is MTMC GBL tape record required
N
End of Process
Y
Prepare GBL Tape Record and send to MTMC
MTMC

APPENDIX D-137

MOFAST IN-PROCESS FILE BUILD/ASSIGN PROCESS CODES

1. GENERAL

a. This chart defines the procedure necessary to provide data elements from the MOWASP shipping documentation process to build the MOFAST System's on-line In-Process File.

b. The MOFAST In-Process File consists of Shipment Unit (SU) and Line Item Records which are being processed through the shipping and transportation operations. The data elements provided for in this chart form the nucleus of data for each SU and Line Item Record. Additional data elements required for processing the item through MOFAST to completion are added to the record via various required CRT entries.

2. SOURCE OF INPUT

Data elements required to build MOFAST Shipment Unit and Line Item Records originate in the MOWASP shipping documentation process per appendix D-98. No other input action is required during the file build process.

3. OUTPUT

File generation data set to be used to create Shipment Unit and Line Item Records for the MOFAST System on-line In-Process File.

ACTIONS/DECISIONS
FROM D-98
Obtain Shipment Unit and Line Item Elements from MOWASP Shipping documentation process to feed MOFAST In-Process File as follows:
Item
Consignee Code
Destination Cross Reference
Shipment Unit Number
SU Line Item Number
MRO Image (App. B-7, DSAM 4140.2 Vol III)
PDT
MDT
Location
Geo. Area Code
Geo. Sub-Area Code
Exception Date
Document Date
NMFC
NMFC Suffix
Unit Weight (2 decimals)
Unit Cube (2 decimals)
Number of SU Line Items
No 2o Parcel Post Flag
Special Requirements Code
MODE Code
LTL Rate $ (1 decimal)
LCL Rate $ (1 decimal)
Master TCN Number
TU Assembly Point
Air POD Code
Air POE Code
Water POD Code
Water POE Code
Air Commodity Code
Water Commodity Code
Parcel Post Zone Code
SEAVAN Flag
Automatic Confirmation Date
Density Flag ("X" locator file)
MOFAST Status Code (Assign A)
Volume Destination Flag (*)
Break Bulk Point Flag (Y)
TOMO Status
Hazardous Storage Compatibility Code
1

ACTIONS DECISIONS
1
Determine shipment unit for volume destination. Match table, App. B-66 Table 12.
Does DCR record match Table 12, destination AAC

1

ACTIONS/DECISIONS
4
CRT operator must determine sort lines which are ready to to be cleared
Enter sort line number to be cleared
Activate sorter mechanism to remove SU from rack.
Clear sort line assigned to released shipment unit.
D-144
Initiate process to offer SU. Prepare labels, route slip.
D-143

APPENDIX D-143

MOFAST LABEL/ROUTE SLIP PREPARATION PROCESS

1. INITIATING ACTION

This process originates as a result of a CRT entry to release a complete Shipment Unit from the mechanized sorter or when a Shipment Unit reaches completed status in the other than sorter input/exception process.

2. REFERENCES

a. Appendix D-142.

b. Appendix D-146.

c. Appendix D-147.

3. GENERAL

Shipment Units having line item and quantity exception data entries completed as a result of CRT entries processed at the mechanized sorter or other than sorter input areas will receive computer prepared labels and a route slip. The number of labels printed will equal the number of packs recorded for the Shipment Unit. One route slip will be produced for each Shipment Unit.

4. OUTPUT

a. Appendix F-180, MOFAST Route Slip.

b. Appendix F-187, MOFAST Address Label.

APPENDIX D-147

MOFAST OTHER THAN SORTER INPUT, SECOND OPERATOR EXCEPTION PROCESS

1. INITIATING ACTION

CRT operator entry of program call numbers and data elements as specified in appendix B-203.

2. REFERENCES

a. Appendix B-203.

b. Appendix D-146.

c. Appendix E-220 P.

d. Appendix E-221 P.

3. GENERAL

This chart illustrates the processes which assign exception data to Shipment Unit Line Item Records. Exception data includes quantity changes and line item to container identification. Option is also provided to input missing line items only and/or line items which have quantity changes when entire shipment unit is packed in one container.

4. OUTPUT

Teleprocessing update of Shipment Unit Line Item Records with container identification, quantity changes, and quantity action codes.

SOURCE
ACTIONS/DECISIONS
1
Enter data per App. B-203
Process to record L/I quantity changes and assign line items to their respective containers.
CRT operator must enter:
1. SU Number
2. Check Digit
3. Container Nr
4. Line Item Nr
5. Quantity Change
6. Quantity action code
7. Final code
Is shipment unit number valid (check digit computation)

APPENDIX D-149

MOFAST GBL NUMBER ASSIGNMENT

1. INITIATING ACTION

The MOFAST System will automatically assign GBL numbers to valid Shipment Units as they are offered to Transportation.

2. REFERENCES

a. Appendix D-142.

b. Appendix D-146.

c. Appendix D-147.

3. GENERAL

a. This process will assign GBL numbers to shipment units which meet the established criteria. Compatible Shipment Units will be consolidated to a common open GBL number.

b. This process selects numbers from the established number register in numeric sequence and establishes the MOFAST Short GBL Record.

4. OUTPUT

a. On-line update of pertinent Shipment Unit records with a GBL number.

b. Creation of Short GBL Record.

APPENDIX D-150

MOFAST GBL PREPARATION PROCESS

1. INITIATING ACTION

CRT operator entry of program call number and data elements as specified in appendix B-193.

2. REFERENCES

a. Appendix B-193.

b. Appendix E-224 P.

3. GENERAL

This appendix describes the processes performed to assemble data used to prepare computer generated Government Bill of Ladings (GBLs) and Commercial Bill of Ladings (CBL) for Foreign Military Sales (FMS) shipments. Pertinent information is obtained from various MOFAST files and arranged into GBL/CBL format. CRT operators are allowed to edit GBL/CBL data and enter changes or additional data as necessary.

4. OUTPUT

Finalized Bill of Lading record ready for printing on GBL Standard Form 1103, 1109 and DLA Form 1320.

APPENDIX D-151

MOFAST GBL RATING PROCESS

1. INITIATING ACTION

This process results from the entry of data to generate a computer prepared GBL (reference appendix B-193).

2. REFERENCES

a. Appendix B-185

b. Appendix B-193

c. Appendix B-194

d. Appendix D-150

e. Appendix E-236 P

3. GENERAL

a. This chart depicts the functions performed to assign transportation costs to a computer prepared GBL. The rating process occurs as a byproduct of the GBL assembly process, appendix D-150.

b. Rating data can either be entered manually or obtained from the various rate files which support the MOFAST System. Costs are calculated and summarized to be included in Shipment Unit records and the GBL printed format and history record.

4. OUTPUT

Computation of estimated transportation costs for inclusion on Government Bills of Lading.

APPENDIX D-152

MOFAST GBL CARRIER SELECTION PROCESS

1. INITIATING ACTION

Requirement to include carrier information in the GBL format.

2. REFERENCES

a. Appendix D-150.

b. Appendix E-238 P, Part E.

3. GENERAL

The MOFAST System provides several alternative methods to assign carrier information to a GBL record:

a. Carrier Spur File.

This file assigns carrier information to a GBL record based upon geographic area code. This file is loaded daily as noted in appendix E-238 P, part I.

b. Update of Short GBL Record.

CRT operator can enter data to add or change carrier code information in the short GBL record prior to billing action. Reference appendix E-238 P, part E for entry instructions.

c. GBL Process.

(1) GBL records being rated using the Tariff Tender Rate Base file will be assigned to the "Prime" carrier established for the pertinent rate base record when a carrier code has not been previously entered.

(2) The absence of a carrier code in the GBL record will cause a message to appear on the CRT which requests the entry of carrier data.

d. Carrier File.

This file contains Carrier Code and Name information applicable to each specific user depot. Each depot must establish this file according to the procedures outlined in appendix E-230 P.

4. OUTPUT

Carrier information on computer prepared GBLs.

MOFAST GBL FREIGHT DESCRIPTION PROCESS

1. INITIATING ACTION

The process of selecting Freight Description occurs as part of the GBL preparation program.

2. REFERENCES

Appendix D-150.

3. GENERAL

a. The Freight Description process provides valid in-the-clear item descriptions for incorporation into computer prepared GBLs.

b. Freight Descriptions originate from the Freight Description File developed by the Freight Description Manager and local depot input. Data in the file represents MTMC approved descriptions, and special descriptions relative to Mode of Shipment, Tariff, Density items, Hazardous items, and Freight All Kinds. Descriptions are selected based upon the item with the highest LTL value in each container on the GBL.

4. OUTPUT

GBL Description of Articles Block.

a. Appendix B-180.

b. Appendix B-185.

c. Appendix E-236 P.

3. GENERAL

a. This chart outlines the basic process performed to add, change, and delete records pertinent to transportation rating files.

b. File update is performed in an on-line CRT environment with the exception of a constant rate increase or decrease which applies to all rates in a specific tariff. This change is accomplished using DIC ZVH per appendix B-180.

4. OUTPUT

On-line files used to support MOFAST GBL process.

EXTENDED BANKING OF MRO(S)

1. INITIATING ACTION

Appendix B-66, Table and Control File.

2. REFERENCES

a. Appendix A-42

b. Appendix B-66

c. Appendix D-27

d. Appendix D-29

e. Appendix D-98

3. GENERAL

This chart outlines the procedures that have been established for automated extended banking of MROs. It is to be used in addition to and compliments processes outlined in appendices D-27 and D-98.

4. OUTPUTS

Appendix F-38

SOURCE
ACTIONS/DECISIONS
D-41
Has option to exercise Extended MRO Banking been activated (T&C Table 04)
N
Y
Is MRO other than IPG III
Y
N
Does MRO have 'No Location' or DIC of ASS/ASE
Y
N
D-27
D-28
1. Place remaining MROs into MRO Workload Bank, suppress all automatic release of MROs.
2. Ignore Geo. Area PDT assignment and assign the PDT equal to the MDT (MDT = date of receipt from Autodin header plus 8 days).
3. Prepare F-38 Part II reflecting detail data elements for current day minus 1 thru 9 and accumulate MROs greater than current day minus 10 into one column in the report (descending order).
4. Accept and process ZBL Workload Request Cards IAW App. B-98 and D-26.
5. When MROs are released for documentation IAW D-98 compute record in history in-process file and print the PDT as follows:
PDT - PDT equals the sum of the document release date and the Document Release Date Constant from Table 04, Table and Control File.
Y

ACTIONS/DECISIONS
1
Does PDT fall on a non-workday (Sat, Sun, or Holiday)
Y
N
Is modified PDT option in effect
Y
N
Use computed PDT
Is option set for date preceeding non-workday
Y
N
Add one day for each non-workday
Subtract one day from PDT for each non-workday
Is PDT less than DRD
Y
N
Adjust PDT to equal DRD
1. ACD - Compute ACD IAW D-98.
2. Whenever PDT is later than MDT enter hold code W in MRD In-Process/ History File.
3. Continue processing IAW D-98
D-98

APPENDIX D-158

MOFAST TCMD CARDS AND TRANSCEIVER DATA

1. INITIATING ACTION

CRT operator entry of program call numbers and data elements specified in appendices B-212 and E-228 P.

2. REFERENCES

a. Appendix B-212.

b. Appendix E-228 P.

c. Appendix F-182.

d. DoD 4500.32-R, MILSTAMP.

3. GENERAL

TCMD data required for export air and surface export shipments as well as domestic Logair/Quicktrans shipments will be provided from MOFAST files upon entry of data elements noted in appendix B-212. The CRT operator will complete entry of data required IAW DoD 4500.32-R, MILSTAMP.

4. OUTPUT

a. Appendix F-182, MOFAST TCMD Transaction Listing. Produce against EXMIT file.

b. TCMD cards and/or transceiver data formats per DoD 4500.32-R.

Prepare TX9 card sequence #2 and 3 with the following message:
H = #2 CONTAMINATED CARGO NOT
#3 INCLUDING HAZARDOUS
E = #2 EMPTY HAZ MAT CONT OR
#3 PKGS (EMPTY LABEL)
M = #2 MAGNETIC MATERIAL
U = #2 COMBUSTIBLE LIQUID
#3 (NO LABEL)
N
14

ACTIONS/DECISIONS

* Invert PSC in cc 5 thru 8 with cc 3 left blank. Consolidated shipments select the PSC with the predominant weight.

ACTIONS/DECISIONS

* Insert PSC in cc 5 thru 8 with cc 4 left blank. Consolidated shipments select PSC with predominant weight.

ACTIONS/DECISIONS

* Insert FSC in cc 5 thru 8 with cc 4 left blank. Consolidated shipments select FSC with predominant weight.

21
Is Service Code D, E, F, or J (Air Force), HK2, HK4, cc 30-32
Y
24
N
Is Service Code M or K (Marines)
Y
Output TOMD to EXMIT with Routing Code M
16a
N
Redisplay TOMD and message: CANNOT TRANSCEIVE
Correct and Reenter data
Correct Service Code or change output indicator to punch
16
23
Is WPOE equal to 103
Y
Output TOMD to EXMIT with Routing Code T
16a
N
Is WPOE equal to 104
Y
Output TOMD to EXMIT with Routing Code W
16a
N
Is WPOE equal to 304
Y
Output TOMD to EXMIT with Routing Code X
16a
N
Output TOMD to EXMIT with 1st position of WPOE as Routing Code. Build GBI Header card if GBI number is on input

ACTIONS/DECISIONS

* Air Force consolidated shipments require showing MRO's in SU for challenge purposes. Put in MRO Doc. Number cc 54-70 on TX-9 Trailer Cards 1-9. Also put in estimated weight on TX-9 Trailer Card 1-8 cc 72-76. Put in count of remaining MRO's and message on TX-9 Card seq. 9 cc 71-79. Right justified i.e. xxx ADD MRO. Blank positions not filled with zeros.
If hazardous or other data must be in TX-9 Card, it takes precedence; MRO Doc.No. and Est. weight are then entered in first available TX-9 Card but with total add MRO's in 9th Card.

APPENDIX D-159

WEEKLY MRO HISTORY ANALYSIS

1. INITIATING ACTION

Office of Data Systems must enter a report control card which establishes date parameters for data to be included in these output, reference DLAM 4745.1.

2. REFERENCES

a. Appendix B-125.

b. Appendix F-134.

c. Appendix F-231.

3. GENERAL

The process noted in this chart outlines the processes used in the creation of the F-134, Weekly Transportation Fund Obligation Report, associated B-125 punched cards, and the F-231, Weekly Small Package Carrier Report. The data used originates from the MRO History File and Transportation Appropriation Table, appendix B-66.

4. OUTPUT

a. Appendix F-134, Weekly Transportation Fund Obligation Report.

b. Appendix B-125, Transportation Fund Obligation Cards.

c. Appendix F-231, Weekly Small Package Carrier Report.

SOURCE
ACTIONS/DECISIONS
MRO History File
Assemble data required for preparation of weekly B-125 Fund Obligation Cards and weekly F-134 report. * Assemble data required for weekly small package carrier report.
F-231 Weekly small Package Carrier Report *
DS/T
Obtain Appropriation code data from App. B-66
Produce F-134 report for weekly GBL/CBL Confirmed Freight Shipments
F-134 Transportation Fund Obligations Report
DS/T
Produce Trans. Fund Obligation Cards, App. B-125 in same sequence as F-134 report
B-125 Trans. Fund Oblig. Cards
* Report date parameters are established by ODS thru entry of report control card per DLAM 4745.1.

APPENDIX D-160

MOFAST SPECIAL PROCESSING RELEASE REQUEST PROCESS

1. INITIATING ACTION

CRT operator entry of data elements noted in appendix B-219.

2. REFERENCES

a. Appendix B-219.

b. Appendix E-232 P.

c. DLAR 4500.3, Chapter 20.

3. GENERAL

The process noted in these charts identifies the functions necessary to prepare release request card formats as noted in DLAR 4500.3, Chapter 202. Data to create card formats originates from operator entry and the MOFAST data base.

4. OUTPUT

Release Request Card IAW DLAR 4500.3.

APPENDIX D-164

MOFAST GBL/COMMERCIAL BILL NUMBER ASSIGNMENT PROCESS

1. INITIATING ACTION

CRT operator entry of program call number and data elements noted in appendix B-215, part D.

2. REFERENCES

a. Appendix B-215, Part D.

b. Appendix E-225 P.

3. GENERAL

This appendix describes the process necessary to assign selected Shipment Units to either a Commercial Bill of Lading or Government Bill of Lading number. This process is administered under manual control via CRT input and overrides automatic GBL assignment criteria.

4. OUTPUT

a. Shipment Unit Records updated with either CBL or GBL number.

b. Short CBL or GBL record for selected Shipment Units.

APPENDIX D-165

MOFAST SPECIAL PROCESSING, SPECIAL HANDLING PARCEL POST PROCESS

1. INITIATING ACTION

CRT operator entry of the program call number and data elements specified in appendix B-206.

2. REFERENCES

a. Appendix B-206.

b. Appendix E-217 P.

3. GENERAL

This chart describes the processing of transactions which pertain to special types of parcel post shipments. Type of shipments included are Registered, Certified, Insured, FMS (NOA number), Weapon System Pouch and routine mail. The processing of quantity changes is also described in this chart.

4. OUTPUT

MOFAST parcel post shipment units records are updated to status code Z. These records will be processed to MOWASP as shipment confirmations and dropped from the MOFAST In-Process File during the daily maintenance cycle.

APPENDIX D-166

TRANSPORTATION ACCOUNT CODE ASSIGNMENT PROCESS

1. INITIATING ACTION

Selection of Transportation Account Codes (TACs) pertinent to each Shipment Unit occurs during the MOWASP Shipping Documentation Process, appendix D-98.

2. REFERENCES

a. Appendix D-98, Shipment Unit and Documentation Process

b. Appendix F-79, Shipment Planning Worksheet

3. GENERAL

This chart describes the process required to select TACs which are used in TCMD card formats. These codes will be assigned to pertinent Shipment Unit records during the shipping documentation process.

4. OUTPUT

a. MOWASP Depots - The TAC will appear in the TCMD format (pos. 64-67) of the F-79 format.

b. MOFAST Depots - The pertinent TAC will be assigned to Shipment Unit records in the In-Process File.

APPENDIX D-167

MOFAST FORCE CLOSURE PROCESS

1. INITIATING ACTION

CRT operator entry of program call number and data elements as specified in appendix B-222. This process is used when a management decision is made to force close MRO records from the MOWASP In-Process File. Program is applicable to MOFAST depots, only.

2. REFERENCES

a. Appendix B-222

b. Appendix E-252 P

3. GENERAL

This appendix describes the process used to update Line Item records with force closure action.

4. OUTPUT

The daily file maintenance routine will generate appropriate status messages and retire the Line Item record from the In-Process File to history.

APPENDIX D-169

MOFAST CONSOLIDATED PACK SHIPMENT UNIT ASSIGNMENT PROCESS

1. INITIATING ACTION

CRT operator entry of program call number and data elements as specified in appendix B-215, Consolidated Pack section.

2. REFERENCES

a. Appendix B-215.

b. Appendix D-146.

c. Appendix E-222 P.

3. GENERAL

This chart illustrates processes required to assign multiple Shipment Units which are consolidated into one container to a master transportation control number.

4. OUTPUT

Teleprocessing update of Shipment Unit records.

SOURCE
ACTIONS DECISIONS
1
Enter data per App. B-215 Part H
To post, add or delete shipment unit to or from a consolidated pack, or to update the master SU container data, CRT operator must enter:
1. Normal Consolidation.
a. Container Cont. Number.
b. Master SU Nr.
c. Check digit.
d. Sub SU Number(s).
e. Sub SU Check digit(s).
f. Option Code F or M.
2. Option A:
a. Master SU Nr.
b. Check digit.
c. Option A.
3. Option D:
a. Master SU Nr.
b. Check digit.
c. Sub SU Number(s).
d. Sub SU check digit(s).
e. Option D.
4. Option U:
a. Master SU Nr.
b. Check digit.
c. Option U.
2
Are SU numbers entered valid (check digit computation)

APPENDIX D-172

MOWASP MODE OF SHIPMENT SELECTION

1. GENERAL

a. This appendix defines the logic necessary to mechanically select the mode of shipment code for each Shipment Unit (SU) planned in MOWASP.

b. It also defines the logic for selecting and printing mode of shipment messages on the DoD Single Line Item Release/Receipt Document.

2. SOURCE OF INPUT

Data elements necessary to select the mode of shipment are mode messages originated in the MOWASP Shipping Documentation process per appendix D-98. No other input action is required.

3. OUTPUT

The MOWASP SU record is updated with the mode of shipment selected. This will be the mode of shipment utilized in shipment confirmation for small parcel shipments unless it is updated by transportation personnel. Additional systems processing as well as transportation personnel input is required to record the actual mode for freight shipments.

APPENDIX D-173

MOWASP DATA BANK CHANGE NOTICE

1. INITIATING ACTION

Appendix B-137, Central Data Bank Change Notice Card, DIC CBC.

2. REFERENCE

Appendix B-137, Central Data Bank Change Notice Card.

3. GENERAL

These cards are used to establish, delete or change data pertaining to catalog and shipping actions in the header section of the Item Locator record from the Central Data Bank to the requestor or user.

4. OUTPUT

a. Appendix B-114, Depot Balance/Transaction Register and Locator Data Correction Card.

b. Appendix B-136, MOWASP Data Bank Transactions.

c. Appendix B-169, Locator NMFC for Freight Description File Compare.

d. Appendix C-104, Storage Identification Label.

e. Appendix F-60, Data Bank Delete Code Incompatible with Locator Remove Tag.

f. Appendix F-82, Part IV, Storage Item Change (SIC) Listing.

g. Appendix F-85, Violation Control Listing.

h. Appendix F-86, Missing Data Element Reports, Parts I and II.

* If NMFC Suffix, cc 45 equals X and is added, exclude this data in DIC CBB.

* F-82 Part IV will only be prepared when any of the following data elements are changed:

Mgr, FSC, UI, Shelf Life Code, NMFC, or Physical Security Code.

This does not include record where blanks were replaced with valid data.

** If the Special Requirements Code on the Locator is B and the SPRQMT Code on the incoming CBC is blank, do not overlay the B on the locator with a blank. Only overlay the B with another valid code.

* At DGSC C-104 label will be suppressed for DISARS controlled locations. A DISARS control document (DCD) will be used instead for these locations and processed IAW DISARS operating procedures.

APPENDIX D-174

DEPOT BALANCE/TRANSACTION REGISTER MATERIEL ADJUSTMENT DOCUMENT

1. INITIATING ACTION

Appendix B-62, Balance/Transaction Materiel Adjustment Document.

2. REFERENCES

a. Chapter 72, Reconciliation of Depot and ICP Balance and Transaction Records.

b. Appendix A-82, Violation Reason Codes.

c. Appendix F-145, Depot Balance and Transaction File Printout.

d. Appendix F-146, Monthly Reconciliation Unmatched Balance/Transaction.

3. GENERAL

a. This action/decision chart depicts the processing of the Balance/Transaction Materiel Adjustment Document (DIC ZAD) as direct input from DS/T.

b. The DIC ZAD (pos. 1-3) will be processed as indicated by the original DIC (pos. 23-25). If the ZAD is a reversal (X overpunch in pos. 32) and the on-hand balance is less than the reversal, an F-145, part 4, will be prepared to indicate a credit balance condition.

c. If there is not a Depot Balance record for the DIC ZAD input, an F-85, Violation Control Listing will be prepared with Violation Reason Code PU.

4. OUTPUT:

a. Appendix F-85, Violation Control Listing.

b. Appendix F-145, Part 4, Depot Balance and Transaction File Printout.

APPENDIX D-175

LOCATOR UPDATES TO THE DB&TR SUBSYSTEM

1. INITIATING ACTIONS

a. Appendix B-71, Item Locator Subrecord Addition, Deletion, and Change Card.

b. Appendix B-73, Item Locator Record Card.

c. Appendix B-137, MOWASP Data Bank Change Notice.

2. REFERENCES

a. Chapter 7, Physical Inventory Procedures.

b. Chapter 72, Reconciliation of Depot and ICP Balance and Transaction Records.

c. Appendix E-024 P, Procedures for Processing the Locator/DB&TR Reconciliation Analysis Listing.

d. Appendix F-131, Locator/DB&TR Reconciliation Analysis Listing.

3. GENERAL

a. This chart illustrates the matching and updating processes between the Depot Locator File and the Depot Balance/Transaction Register (DB&TR) Files.

b. When the DB&TR Balance Record differs from the Commodity Manager, Unit of Issue, or NSN the data in the DIC ZEJ will overlay the incorrect data on the DB&TR Balance Record. It will create appendix F-131, parts 1 and 4, Daily Locator/DB&TR Reconciliation Analysis Listing (and statistics for the F-131, part 2, monthly listing). It will also create an F-145, part 5, for each NSN, condition, and type of pack which appear on the F-131, part 1, listing.

c. When a locator first add or last delete action is passed to the DB&TR and the DB&TR reflects a balance for the last delete or no balance for a first add, a DIC ZJA will be generated which will initiate an inventory.

d. When the DB&TR Balance File goes to zero the record will be flagged. If after 10 or more days have elapsed and DIC ZEJ action code KB has not processed or the Balance Record has not gone into a positive position, an F-131, parts 1 and 4, and a DIC ZJA will be produced along with the corresponding F-145, part 5.

NOTE: A reserved location of any sort will <u>not</u> be considered an active location.

4. OUTPUT

a. Appendix B-26, Physical Inventory Request Card.

b. Appendix F-131, Parts 1, 2, and 4, Locator/DB&TR Reconciliation Analysis Listing (daily and monthly).

c. Appendix F-145, Part 5, Depot Balance and Transaction File Printout.

b. Appendix F-182, TCMD Transaction Listing

c. Appendix E-228 P, MOFAST TCMD Cards and Transceiver Data

d. Appendix D-98, Shipment Unit and Documentation Process

3. GENERAL

This chart depicts the process of preparing Advanced TCMDs for Air Export Shipments. This is accomplished during the Shipment Unit documentation process. This Advanced TCMD is prepared to expedite the air challenge process. A corrected TCMD must be prepared IAW appendix E-016 P or E-228 P after the Shipment Unit is packed and ready for shipment.

4. OUTPUT

A TCMD format per DoD 4140.32R (MILSTAMP), is output to the appropriate Air Clearance Authority via AUTODIN. The TCMD is also listed on the F-182, TCMD listing.

DB&TR MONTHLY SHELF-LIFE CODE UPDATE TO DEPOT LOCATOR FROM FAWESP TAPE

1. INITIATING ACTIONS

   a. DSC Monthly FAWESP Tape.

   b. Depot Locator File.

2. REFERENCES

   a. Appendix B-113.

   b. Appendix B-137.

   c. Appendix B-159.

   d. Appendix D-17.

   e. Appendix D-36.

3. GENERAL

This action/decision chart depicts the monthly match between the DSC Monthly FAWESP Tape and the Depot Locator for the purpose of reconciling Shelf-Life Codes. The FAWESP Tape will be matched with the Depot Locator for Shelf-Life Code. If a disagreement exists, the FAWESP Tape record will be matched with the CMDN updates effective for the current month. If a disagreement exists, DIC ZBC records will be produced and processed normally to update the locator with the new Shelf-Life Code.

e. Appendix E-094 P

f. Appendix E-094 V

g. Appendix F-85

h. Appendix F-204

3. GENERAL

a. This chart depicts automated processing of Acceptance inputs transmitted to the depots by the Contract Administration Offices (CAO).

b. All inputs transmitted via AUTODIN by the CAO will contain Document Identifier Code PK5. Different types of transactions will be identified by the Transaction Status Code in pos. 80 as follows:

TRANSACTION STATUS CODE	TYPE TRANSACTIONS
Blank	Acceptance Alert
Numeric	Followup Request
E	Request for Retransmission

c. Entry of an Acceptance Alert may cause transmission of a corresponding Acceptance Report (appendix B-134) to the CAO (if the receipt has already arrived at the depot) or merely recording of the input in the automated file. Entry of a followup may result in preparation of an Acceptance Report or an appropriate followup response and record of an Acceptance Alert if one was not

previously recorded at the depot. Requests for retransmission or correction of an Acceptance Report will always result in preparation of an Acceptance Action Report (appendix F-204) for manual review and action.

d. Violation correction procedures are provided in appendix E-094 V.

4. OUTPUTS

a. Appendix B-134, Acceptance Report.

b. Appendix F-85, Validation Reject Report.

c. Appendix F-204, Acceptance Action Report.

APPENDIX D-179

MANUALLY PREPARED ACCEPTANCE REPORTS

1. INITIATING ACTION

Appendix B-134, Acceptance Report or Acceptance Report Cancellation.

2. REFERENCES

a. DoD 4105.63-M, Military Standard Contract Administration Procedures (MILSCAP).

b. Chapter 3.

c. Appendix B-134.

d. Appendix E-094 P.

e. Appendix E-094 V.

f. Appendix F-85.

3. GENERAL

a. This chart depicts processing of Acceptance inputs processed by depot personnel. Acceptance Reports will be prepared manually when conditions do not permit automated preparation or a previously submitted report requires cancellation or correction.

b. Entry of manually prepared Acceptance Reports will cause the input to be transmitted to the Contract Administration Office (CAO) via AUTODIN and the Acceptance Report history to be updated appropriately. Acceptance Reports not previously recorded will be added to the history. Those inputs matching a history record will overlay the previous record. Cancellation inputs (X overpunch in pos. 10) will cause the matching history record to be deleted.

c. Violation correction procedures are provided in appendix E-094 V.

4. OUTPUTS

a. Appendix B-134, Acceptance Report.

b. Appendix F-85, Validation Reject Report.

CONTRACT DATA CARDS PROCESSING

1. INITIATING ACTION

Appendix B-31, Contract Data Card.

2. REFERENCES

a. Chapter 3

b. Appendix B-31

3. GENERAL

a. Basic Contract Data Cards in the format of appendix B-31 are transmitted to the depot by the Defense Supply Center (DSC) via AUTODIN. The cards consist of four separate formats which contain various elements of contractual and item description information for receipt inspection purposes.

b. The primary card (DIC CC1) controls the basic processing through entry of an Action Code in the last position. Action Codes 1, 2, and 3 represent Delete, Add and Change, respectively, and are reserved for use by the DSC. Action Code 4 provides for local delete by depot personnel, when necessary.

c. Contract Data cards will be transmitted by those DSCs operating the Standard Automated Materiel Management System (SAMMS) for commodities C, E, G, and I. A set of four cards will be provided for each Contract Line Item Number (CLIN) as contracts are awarded.

4. OUTPUT

APPENDIX D-184

STOCK LOCATION SELECTION

1. INITIATING ACTIONS

Receipt of Materiel Release Orders by the storage depot.

2. REFERENCES

a. Appendix D-41, Materiel Release Order Validation.

b. Appendix D-65, Disposal Release Order.

c. Appendix D-108, IPE Release Order Validation.

3. GENERAL

a. Issue transactions, originated by the cognizant DSC/ICP in accordance with Volumes I and II of DLAM 4140.2, are forwarded to the distribution depot via AUTODIN and are entered directly into the computer. The depot computer validates each transaction, appends local processing data, selects the stock locations and appends location and transportation data from the stock locator record to the MRO/DRO record.

b. Generally, the oldest materiel in stock is selected first (first-in first-out). Notable exceptions to the rule are when MROs specify newest stock is to be shipped (usually shelf-life items) or if a stock location has been manually assigned (type location A or K). In the latter instance, stocks are designated by management for utilization prior to other similar stock.

c. When three or more stock locations are available which satisfy the conditions of the issue transaction, three stock locations will appear on the document. When more than 30 locations are available, the second alternate location will be replaced with the message "See F-096".

4. OUTPUT

This is an entirely internal computer function with the only externally visible outputs being the stock locations on the MRO/DRO (see appendix C-11).

If Type Location is A or K select 3 oldest locations, if available, with last position of location 'I'. Otherwise, select oldest locations of any type location, if available with last position of location 'I'. Append location(s) to MRO record.
Generate ZBI Inquiry (action code FP) and ZAN Inquiry UM mnemonics B-61 and B-117
D-47
D-126
* If no location is found with matching LIC/CAGE, disregard LIC/CAGE criteria and assign locations in ascending sequence from the oldest location (FIFO).

1
Locator sub-record(s) available for indicated cycle(s) (last position of warehouse location
Y
N
Select 3 locations, if available for cycle(s) indicated. If type location A or K is available select oldest locations in this category first. Select oldest locations within other type locations.
Append 'No Location' message to NRO record
D-41
D-65
D-108

2
Is document ASJ
Y
N
3
Is manager code W
Y
N
3
Prepare A6J with management code C. Output to EXIT. Put DRO record to history. Prepare listing of transactions rejected to DSC
A6J Mgmt. Code C
EXIT
Is management code Z (exception DRO)
Y
N
F-12 Transactions Rejected to DSC
DS/T

3
Is Type Pack Code (MRO cc 73) '3' (Non-DICOMSS, DICOMSS Troop Support) (MRO)
Y
Change Type Pack Code to '1'
N
Is Management Code (cc 72) 'G' (MRO)
N
5
Y
Does MRO Type Pack (cc 73) and Condition (cc 71) match any locator sub-record
N
Y
Does 12 months shelf life remain on any locator sub-record
N
Append 'NO LOC' message to MRO record
D-41
D-65
D-108
Y
Are all locations on Locator sub-records type 'A' or 'B' (Bin Locations)
Y
Select three bin locations if available with the oldest date of pack with 1 year shelf life remaining in ascending order. Select Type A loc. prior to Type B. Append selected locations to MRO record.
16
N
4

4
Are all locations on locator subrecords type K or L (bulk locations)
Y
N
Select three bulk locations if available. Begin with oldest date of pack with 1 year shelf life remaining. Assign oldest as prime, next oldest as 1st alternate and third oldest as 2nd alternate. Select Type K locations prior to Type L locations.
16
Is the MRO qty equal to or greater than the unit pack in the first bulk location
Y
N
Is only one bin location available
Y
N
Select two bin locations with 12 mos. shelf life remaining, if available. Oldest stock-prime location, next oldest stock-first alternate location. Second alternate location will be oldest bulk location with 12 mos. shelf life remaining. Select Type A locations prior to Type B; Type K locations prior to Type L.
Select bin location as prime location. Select oldest bulk location with 12 mos. shelf life remaining for first alternate location. If available, select next oldest bulk location if 12 mos. shelf life remain as second alternate location. Select Type A locations prior to Type B; Type K locations prior to Type L.
Is the MRO quantity greater than the quantity in Table 4
Y
N
Is only one bulk location available
Y
N
Select two bulk locations with 12 mos. shelf life remaining if available. Oldest stock-prime location, second oldest stock-first alternate location. Second alternate location will be oldest bin location with 12 mos. shelf life remaining. Select Type A locations prior to Type B; Type K locations prior to Type L.
Select the bulk location as prime location. Select oldest bin location with 12 mos. shelf life remaining as first alternate location. If available, select next oldest bin location if 12 mos. shelf life remain, as second alternate location. Select Type A locations prior to Type B; Type K locations prior to Type L.
Append selected locations to MRO record
16

ACTIONS DECISIONS
5
Is advice code (MRO cc 65-66) 26, 23, 24, 29 or 31, BF 55-70, 15, D, K, P or T
Y
N
7
Is type shelf life code numeric 1-9 or X
Y
N
Any locations with next inspection date equal to or greater than current date
Y
N
Append 'NO LOC' message to MRO record
D-41
D-65
D-108
Are all locations bin or bulk, or the three greatest next inspection/expiration dates located exclusively in bin or bulk
Y
N
Select 3 locations if available, greatest next inspection/expiration date. Assign prime, 1st alternate and 2nd alternate locations in descending order. Append selected locations to MRO record.
16
Are the three greatest next inspection/expiration dates equal
Y
N
6
Is type shelf life code alpha A-H, J-N or P-S
Y
N
7a
Any locations with expiration date equal to or greater than current date
Y
N
Append 'NO LOC' message to MRO record
D-41
D-65
D-108

6
Is the MRO quantity equal to or greater than the unit pack in the first bulk location.
Y
Assign bin locations with greatest next inspection/expiration date to prime and 1st alternate location. Assign bulk location with greatest next inspection date to 2nd alternate loc.
Y
Is the MRO quantity greater than the quantity in Table 4.
N
Y
Assign bulk locations with greatest next inspection/expiration date to prime and 1st alternate location. Assign bin location with greatest next inspection date to second alternate location.
Append locations to MRO record
16

7
Is Mgmt Code F (MRO cc 72)
Y
N
9
7a
Have any locations been selected for processing

D-108
Are all locations Type A or B (bin locations)
N
8
Y
Select 3 locations with latest date of pack, if available as follows: Prime location newest date of pack; 1st alternate location 2nd newest date of pack; 2nd alternate location 3rd newest date of pack.
Select Type A location prior to Type B. Append selected locations to MRO record.
16

8
Are all locations Type K or L (bulk location)
Y
N
Select 3 locations with latest date of pack, if available, as follows:
Prime location newest date of pack; 1st alternate location 2nd newest date of pack; 2nd alternate location 3rd newest date of pack.
Select Type A location prior to Type B.
Append selected locations to MRO record.
16
Is the MRO qty equal to or greater than the unit pack in the last bulk location
Y
N
Is the MRO quantity greater than the quantity in Table 4
Y
N
Is only one bin location available
Y
N
Select bin location as prime location. Select newest bulk location as 1st alternate location. Select 2nd newest bulk location, if available, as 2nd alternate location *
Select newest bin location as prime location, select 2nd newest bin location as 1st alternate location. Select newest bulk location as 2nd alternate location *
Is only one bulk location available
Y
N
Select bulk location as prime location. Select newest bin location as 1st alternate location. Select 2nd newest bin location, if available, as 2nd alternate location *
Select newest bulk location as prime location, select 2nd newest bulk location as 1st alternate location, select newest bin location, if available, as 2nd alternate location *
Append selected locations to MRO record
16
* Select Type A locations prior to selection of Type B and Type K prior to selection of Type L.

* Type Pack Code is not considered in location selection for NROs for other than DICOMSS.

10
Are all locator subrecords for bulk locations (Type Loc. K or L)
N
11
Y
Is one or more Type K loc. on locator for TP and Cond. indicated in MRO
N
Select oldest 3 type L locations if available and assign prime location, oldest subrecord; 1st alternate location next oldest subrecord; 2nd alternate location 3rd oldest subrecord **
Y
Are two or more Type K locs. on locator for TP and Cond. indicated in MRO
N
Select Type K location as prime location. Assign oldest locator subrecord for Type L if available to 1st alternate location. Assign next oldest Type L location if available to 2nd alternate location **
Y
Are three or more Type K locs. on locator for TP and Cond. indicated in MRO
N
Select oldest Type K loc. as prime location, select next oldest Type K loc. as 1st alternate location. If available, select oldest Type L loc. as 2nd alternate location **
Y
Select oldest Type K loc. as prime location, select next oldest location as 1st alternate location, select 2nd oldest location as 2nd alternate location **
Append selected locations to MRO record
16

11
Are all locator subrecords for bin locations
N
12
Y
Is one or more Type A locs on locator for TP and Cond. indicated in MRO
N
Select oldest 3 type B locations if available. Assign oldest subrecord as prime location, next to oldest subrecord as 1st alternate location and 3rd oldest location as 2nd alternate location
Y
Are two or more Type A locs on locator for TP and Cond. indicated in MRO
N
Select Type A location as prime location, select oldest Type B location as 1st alternate location, select next to oldest Type B location as 2nd alternate location
Y
Are three or more Type A locs on locator for TP and Cond. indicated in MRO
N
Select oldest Type A location as prime location, next to oldest as 1st alternate location and 3rd oldest as 2nd alternate location
Y
Select oldest Type A location as prime location, next to oldest as 1st alternate location, and 2nd from oldest as 2nd alternate location
Append selected locations to MRO record
16

12
Is the MRO quantity equal to or greater than the unit pack in the first bulk location.
Y
N
Is the MRO quantity greater than the quantity in Table 4
Y
14
N
Are any Type A subrecords on locator file
Y
Assign oldest Type A location as prime location
N
Assign oldest Type B location as prime location
Are there any remaining Type A locations on locator file
Y
Assign oldest remaining Type A location as 1st alternate location
13
N
Are there any remaining Type B location
Y
Assign oldest remaining Type B location as 1st alternate location
13
N
13

15
Are any Type K subrecords on locator file
N
Y
Has first alternate location been assigned
Y
Assign oldest Type K location as 2nd alternate location. Append selected locations to MRO record
16
N
Assign oldest Type K location as 1st alternate location
Are there any remaining Type K location
Y
Assign oldest remaining Type K location as 2nd alternate location. Append selected locations to MRO record
16
N
Has first alternate location been assigned
Y
Assign oldest Type L location as 2nd alternate location. Append selected locations to MRO record
16
N
Assign oldest Type L location as 1st alternate location
Are any Type L subrecords on locator file
Y
Assign oldest Type L location as 2nd alternate location. Append selected locations to MRO record
16
N
No 2nd alternate location assignment. Append selected locations to MRO record

14
Are there any Type K locations on locator file
Y
N
Assign oldest Type K location as prime location
Assign oldest Type L location as prime location
Are there any remaining Type L locations on locator file
Y
N
Assign oldest remaining Type L location as 1st alternate location
15
15
Are there any reamining Type K locations on locator file
Y
N
Assign oldest remaining Type K location as 1st alternate location
15

15
Are there any Type A locations on locator file
N
Y
Has first alternate location been assigned
Y
Assign oldest: Type A location to 2nd alternate location. Append selected locations to MRO record
16
N
Assign oldest Type A location as 1st alternate location
Are there any remaining Type A locations
Y
Assign oldest remaining location as 2nd alternate location. Append selected locations to MRO record
16
N
Are any Type B locations on locator file
N
No 2nd alternate location. Append selected locations to MRO record.
16
Y
Assign oldest Type B location as 2nd alternate location. Append selected locations to MRO record
16
Has first alternate location been assigned
N
Assign oldest Type B location as 1st alternate location
Y
Assign oldest Type B location as 2nd alternate location. Append selected locations to MRO record
16

ACTIONS/DECISIONS
16
Have any locations been selected with "0" in the first position & type of location code
Y
N
Is the 3rd position of the type storage code R or M for the 1st location
Y
N
Is the 3rd position of the type storage code R or M for the 1st alt. location
Y
N
Is date of pack equal to the date of pack in the prime location
Y
N
Make 1st alt. location prime & shift prime to first alt. position
Is the 3rd position of the type storage code R or M for the 2nd alt. location
Y
N
Is date of pack equal to the date of pack in the prime location
Y
N
Make 2nd alt. location prime, shift prime to 1st alt. & 1st alt. to 2nd alt.

ACTIONS/DECISIONS

* Builds unique MAPACs not in DOD 4000.25-8-M (MAPAD) to allow for maintenance of addresses based on priority as required by special instructions in the MAPAD. These FMS MAPACS are not maintained by DAAS. Local depots must maintain all TAC addresses for pri 9-15 under the original MAPACs (DSR003, DSR004, DSR008, and DSR009). TAC addresses for pri 1-8 must be maintained under the "unique" MAPACs (DSR013, DSR014, DSR018, and DSR019). Maintenance is input in accordance with Appendix B-127 and E-129P.

APPENDIX D-190

RECEIVE SEAVAN TRANSACTIONS

1. INITIATING ACTION

Receipt of selected SEAVAN Transactions from MOWASP and recording receipt data for transshipments.

2. REFERENCES

a. Appendix D-41

b. Appendix D-98

3. GENERAL

a. This action/decision chart depicts the processing of DICOMSS and non-DICOMSS MROs into the SEAVAN undocumented MRO file and adjustments to MROs in the file (document modifiers, cancellations, inventory notifications, and denial actions determined during stock selections and shipping functions). In addition Type 2 MRO records (transshipments) are merged with undocumented MROs for SEAVAN Planning.

b. Prior to passing MROs into the SEAVAN Process MOWASP will validate, duplicate check, and append essential shipment planning data from locator and consignee address files. MROs which are missing essential shipment planning data will be suspended until data is provided via CRT by shipment planning personnel.

c. Cancellations and document modifiers will be passed from normal MOWASP processing when MOWASP records indicate matching MROs are in the SEAVAN Process. The transactions will be accomplished basically in accordance with current MOWASP procedures and automatically reported back to MOWASP upon completion. MRO followups will be processed and answered by MOWASP irregardless of the function processing the MRO.

4. OUTPUT

The above process is entirely internal computer processing resulting in the building and maintenance of a computer data file.

a. Appendix F-215, SEAVAN MRO Missing Data Report.

b. Appendix F-217, DICOMSS MROs Under Inventory.

c. Appendix F-218, SEAVAN Unmatched Transaction List.

APPENDIX D-191

PREPARE SEAVAN LOAD PLAN

1. INITIATING ACTION

This function is run on an as scheduled basis by the Office of Data Systems. Normal processing will be once each day.

2. REFERENCES

a. Appendix B-257, SEAVAN Workload Request by Destination.

b. Appendix B-277, SEAVAN Capacity Table.

c. Appendix D-190, Receive SEAVAN Transactions.

d. Appendix F-210, SEAVAN Load Plan.

3. GENERAL

This function processes all undocumented SEAVAN MROs, Transshipment MROs and in-process MROs which were deleted from a planned load and plans them into optimum SEAVAN loads. This function replans all MROs each day until they are released. This assures that the best loads are planned based on all available workload.

4. OUTPUT

Appendix F-210, SEAVAN Load Plan.

* Load Accumulation Key (field)

1. Destination.
2. Special Requirements Code (only if 3, 5 or 6; otherwise, blank).
3. Precedence Group.
4. Type Cargo Group (if Type Cargo Code matches Table and Control File (compatible hazardous) this field will be blank, with the exception that if Type Cargo Code is Q and matches the table it will be considered as Type Cargo 2. If Type Cargo Code 2 or not on Table and Control File this field will contain MRO Type Cargo Code.)
5. Compatibility Code (A, B or 2).
6. RDD (DSR-PAC Support Only).

ACTIONS/DECISIONS

* Field Load Accumulation Key

1. Destination.
2. Special Requirements Code (3, 5, 6 or blank).
3. Precedence Group.
4. Type Cargo Code (blank, Z, or other)
5. Compatibility Code (A, B, or Z).
6. RDD (DSR-PAC Support Only).

Note: If load accumulation record is Z for field 4 or 5, consider it equivalent to a match. If this MRO is added to the load update Z fields in load record with corresponding fields from MRO.

4
Is there a matching load accumulation record
Y
6
N
5

SEAVAN Workload Released by Destination
5
Does Workload Release File have record for this destination
Y
N
Does Workload Release indicate size of SEAVAN to be planned
Y
N
Does input include weight & cube capacity for SEAVAN
Y
N
Use weight and cube capacity from input; compute optimum density
6
Use 20 foot van size for load planning. Compute optimum density for 40 ft. van.
Obtain SEAVAN Cube and weight using van size and refrigeration code * from Table 61. Create a load accumulation record. Use the load accumulation key from this MRO as the load key for determining what other MROs may be added to this load.
If MRO Extended Weight or Cube exceeds 75% of weight or cube parameter of a 20 Ft. van list the MRO on the F-221 Part 1
F-221 Part 1
DS/T
Pick up van size/type and keep track of number of vans planned. After desired vans have been planned use optimum vans for remaining MROs.
* If Special Requirements Code equals 3, 5, or 6, use Refrigeration Code R; otherwise, leave blank.

6
Does total cube or weight or this MRO exceed remaining available weight & cube of this van
Y
N
Is this shipment in process without a load (residual MRO) or transshipment
Y
N
Is this MRO too large to fit on a SEAVAN
Y
F-85 Message: MRO Weight or Cube Exceeds SEAVAN Size
DS/T
N
Is this MRO unsplitable and too large to fit on a SEAVAN
Y
N
Split MRO open qty. so that cube and/or weight does not exceed available weight and cube this van. Consider unit packs. Split MRO and establish new open quantities in each record. Set single line indicator for both records.
Remaining quantity.
2
Add this shipment to another compatible load.
2
Tailored split quantity.
Add MRO total cube and weight to load total cube and weight. Add 1 to total lines. Add MRO cube and weight to DICOMSS cube and weight if DICOMSS flag equals D and add 1 to DICOMSS lines. Add MRO weight and cube to applicable precedence group total line items, weight, cube. Add to stop number totals if load accumulation key indicates booking group.
Is this MRO hazardous (type cargo group other than 2)
Y
Add MRO weight and cube by Type Cargo Code (4th pos. water commodity code) to hazardous weight and cube. Add 1 to hazardous lines.
N
7

7
Is transaction in-process without load (residual MRO) or transshipment
Y
Add cube and weight to in-process cube and weight. Add 1 to in-process shipments.
N
Add MRO weight and cube to weight and cube by warehouse group. Add 1 to MRO lines for warehouse group.
Does total accumulated load weight exceed acceptable weight utilization percentage (from T&C File) of SEAVAN weight capacity
Y
Do not add any more MROs to this load
Select the next remaining MRO with smallest density.
3
N
Does total accumulated load cube exceed acceptable cube utilization percentage (from T&C File) of SEAVAN cube capacity
Y
Does total accumulated load weight exceed acceptable weight utilization percentage when cube is utilized (from T&C File) of SEAVAN capacity
Y
Do not add any more MROs to this load
Select the next remaining MRO with smallest density.
3
N
Does load accumulation van size equal 40 or is SEAVAN "must plan" van
Y
N
8
N
9

* Enter R if Load Special Requirement Code is 3, 5 or 6; otherwise, leave blank.

9
Compute SEAVAN load density
Tot Acc Wt / Tot Acc Cu = Density
Is load density equal to or greater than optimum density
Y
N
Select the next remaining MRO with the smallest density
Select the next remaining MRO with the largest density
3
3

10
Select MRDs which contain a booking group and stop number value and are currently planned to an incomplete load that match stop numbers that were requested on booking group workload release processing. Change the destination in the load accumulation key to 99 plus booking group. Save the original destination value. Add an additional major sequence key of booking group and stop number. Process the MRDs through the SEAVAN load plan logic to build loads by booking group. No more than three stops may be included on a load. Accumulation pieces, weight, and cube for each stop on a booking group load in addition to other totals.
Process batch cycle workload release per App. D-192.
Output the SEAVAN Load Plan Report, F-210, for unreleased loads.
F-210 SEAVAN Load Plan Parts 1 and 2
DS/T

APPENDIX D-192

SEAVAN WORKLOAD RELEASES

1. INITIATING ACTION

Workload release requests are input randomly via CRT. SEAVAN workload requests for additional MROs for in-process loads are processed randomly. Other workload requests are maintained on file until scheduled processing of workload release.

2. REFERENCES

a. Appendix B-256, SEAVAN Workload Request for Additional MROs for In-Process Loads.

b. Appendix B-257, SEAVAN Workload Request by Destination.

c. Appendix B-258, SEAVAN Workload Request by Document Number/Suffix.

3. GENERAL

This function matches workload requests against the SEAVAN MRO Bank. MROs which meet workload request criteria are consolidated into Shipment Units and output to the SEAVAN documentation process.

4. OUTPUTS

a. Internally generated data to the SEAVAN documentation process.

b. Rejects randomly to CRT for invalid workload request inputs.

SOURCE
ACTIONS/DECISIONS
Workload Requests
Edit transactions per App. B-256, B-257, B-258
Edit errors
Y
Correct & retry
N
Is input for additional work-load for in-process load
Y
2
N
Is input work-load request by destination
Y
Suspend the transaction and process on the release date indicated in the transaction. Blank release date indicates process in the next cycle.
3
N
Update MRO record load number to 0000 for workload requests by document number and release MRO in the next batch cycle.
3

2
Randomly select for immediate release MROs which match the input load accumulation key and are not in process.
Is MRO weight and/or cube greater than remaining requested wt. and/or cube
Y
N
Deduct MRO weight and cube from input. Use the load number from input as MRO load number. Output the MRO as additional MRO for in-process load. Select additional MROs until weight and cube for input is satisfied.
2
Is remaining requested wt. less than 200 lbs. or cube less than 10
N
Y
Split MRO open quantity to not exceed remaining requested weight or cube. Consider unit pack. Establish new open quantities in each record. Set single line indicator in each record.
End processing and document MROs which have been selected
5

3
Process batch workload release. Recycle workload release transactions by or destination which have a future release date.
Does MRO record have ØØØØ Load Number
Y
Release MRO for documentation.
5
N
Is there enough full loads for the destination to equal input request
Y
Release number of loads indicated on input. Release loads in order of precedence code.
4
N
Does input request indicate they will accept partial loads to satisfy SEAVAN quantity
Y
Are there sufficient partial loads with specific compatibility code entered to equal input request
Y
N
N
Release available loads and output transaction on violation reject report F-85 with message 'Unsatisfied Workload Release'.
4
F-85 Violation Reject Report

4
Assign a load number for each load released (load number is ØØØ1 thru 9000 and then starts over). Perpetuate load number for each MRO on the load for documentation. Include Mandatory Departure Date (MDD) from input for MRO documentation.
5
Build SU consolidation key and sort file.
1. Load Number.
2. In-Process Flag/ Transshipment.
3. Single Line Indicator.
4. Consignee.
5. Type Cargo (4th pos. of water commodity).
6. Location Group Code
7. Special Requirement Code.
Is MRO in-process (residual MRO) or transshipment (no SU assignment)
Y
Assign S/U number to transshipments.
7
N
Is MRO designated single line
Y
Is this a split MRO
Y
Decrease the open qty. in the MRO record by the amount of this release. Establish the next partial MRO.
6
N
N
Assign all single line MROs and MROs with special requirements storage compatibility code A or hazardous code A1 a separate SU number and use the document number for the TCN. Assign other MROs which have equal type cargo codes and consolidation keys the same SU number. Select a TCN (earliest RDD or oldest document number).
6

6
Assign a Transportation Account Code per MOWASP App. D-166
7
Pass records to documentation process
D-193

APPENDIX D-193

SEAVAN SHIPMENT DOCUMENTATION

1. INITIATING ACTION

Workload release transactions by configured load, additional load filler materiel or by individual MRO are input via remote entry device by shipment planners. MROs are released to documentation both randomly and by batch cycle.

2. REFERENCE

Appendix D-192, Process Workload Release.

3. GENERAL

This function determines and appends batching parameters to MRO/SUs if prime locations indicate materiel is stored in MMHS warehouses, assigns the packing location from the Pack Location Assignment Table in T&C, determines load assembly area, determines van availability, and assigns equipment to the load, prints shipping documentation (SEAVAN Load List, F-212, DD 1348-1 and DD 1348-1, F-2 format), and establishes an in-process control record for load, shipment unit and line item.

4. OUTPUT

a. Appendix F-212, SEAVAN Load List.

b. Appendix F-213, SEAVAN Equipment/MTMC Release Missing Data Report.

SOURCE
ACTIONS/DECISIONS
D-192
Are MROs appended w/Loc. Grp. Code X or numeric from MMHS batching criteria, Table & Control
N
Y
Assign packing location from pack location assignment table in T & C. If no matching selection location in Table, assign pack location same as selection location.
1
Sequence MRO by:
1. Location Group Code.
2. Number of line items in SU - greatest to least.
Access T&C and: 1. Obtain next sequential batch number. Do not exceed 189. Restart at 1Ø1 if batch exceeds 189. Assign batch control number to each Loc. Grp. category. Update T&C with last batch number used.
2. Assign pack location from pack location assignment table. If no matching selection location in Table, assign pack location same as selection location.
Assign sorter chute number in descending order of number of MROs per SU (most to least) beginning with Ø1 for each batch. Output F-58.
1
F-58
DS/T

* Match by destination first, then if no match use POD.

1. Voyage Nr.
2. Serial Number.
3. Terms.
4. Type.
5. Large Vans (greater than 32 ft.)
6. Small Vans (32 ft or less)
7. Vessel Name.
8. Steam Line.
9. SEAVAN Owner Code.
10. Sailing Date.
11. ETA at POE.
12. Ocean Carrier Code.
13. POE.
14. POD.

* If split MRO, suppress printing of any quantity in cc 25-29 (Block Q indicates the quantity to be shipped).

APPENDIX D-194

Prepare the SEAVAN TCMD T-2 for load as follows:

CC	Data
1	Constant T
2	If type cargo code (4th position of the WCC from load record) is A, C, F, G, I, J, K, L, O, P, R, S, T, V, W, Xor Y or if positions 1-3 of WCC from load record are 70X or 40X, then position 2 will be J; otherwise, it will be X.
3	Constant 2
4-8	Last 5 positions of SEAVAN number from load record
9-12	SEAVAN owner from load record
13-14	SEAVAN size from load record
15-19	Water Commodity Code from load record
20	Blank
21-23	POE from load record
24-26	POD from load record
27	Constant V
28-29	Type Pack from load record
30-46	SEAVAN TCN from load record
47-52	Destination AAC from load record key (if stop off van use destination AAC for highest stop off number on the SEAVAN)
53	Highest Transportation Priority for any SU in the load
54-56	Earliest RDD of any MRO in load
57	S - One consignee on the van M - More than one consignee moving directly to a destination with no stop offs 1-9 - Contents for stop off prior to ultimate SEAVAN destination. Indicate number of stops (not including SEAVAN destination)
58-59	Number of SU in SEAVAN
60-62	Last 3 positions of ship date from load record
63	Estimate time of arrival from load record
64-67	SEAVAN cube capacity
68-71	Pieces in SEAVAN
72-76	Weight of contents
77-80	Cube of contents

→

Prepare miscellaneous SEAVAN TCMD T-9 card sequence 1 as follows:

CC	Data
1	Constant T
2	Same as assigned to T-2 TCMD
3	Constant 9
4-8	Duplicate data from T-2 TCMD
9	Constant X
10-14	Zip Code of origin of SEAVAN from Table and Control File
15-19	If refridgerated van (special requirement 3, 5, 6 or 9 in load key) use temperature range from load record; otherwise, duplicate T-2 data
20-27	Duplicate data from T-2 TCMD
28-29	Enter size of SEAVAN ordered from load record
30-53	Duplicate data from T-2 TCMD
54-55	Constant VN
56-63	SEAVAN number from load record
64-65	Constant SN
66-73	Seal number from load record
74-77	Ocean carrier from load record
78-79	Blank
80	Card sequence number 1

→ 25

ACTIONS/DECISIONS

25 → 26

Prepare miscellaneous SEAVAN TCMDs T-9 card sequence 2-9 if miscellaneous information is recorded for the load number.

CC	Data
1-53	Duplicate data from T-9 card sequence 1
54-79	First 26 positions of miscellaneous information in card sequence 2, second 26 positions in card sequence 3, etc.
80	Card sequence 2-9 as required

Prepare stop off information TCMDs A and B as required if the SEAVAN has Stop offs.

CC	Data
1-53	Duplicate data from previous T9s
54-59	If only stop enter 'STPOFF.' If there are two stops then enter 'STØP1.'
60-65	DoDAAC of first stop off. The first stop will be the lowest stop off number recorded in the load record. Do not do stop off information for highest stop number in load record.
66-67	If only one stop, leave blank; otherwise, fill with XX.
68-73	STOPØ2 or blank.
74-79	DoDAAC of second stop off or blank.
80	Card sequence A

Note: An additional card will be prepared with card sequence B for STOPØ3 and STOPØ4, as required.

26
Prepare record as follows for each SU on the load
Is SU flagged as transshipment
Y
N
27
Obtain DOCs from Transshipment TDC file. Complete them as follows:
Data
1-8 SEAVAN No. from T-2 card.
9-14 Container No. in 9-13 and 14 block if containerized shipment (T-3 and associated T-4/C/DS); otherwise, DOPAC or shipping activity, in T-4 only; all other cards blank in 9-14.
21-27 Duplicate from T-2.
KS
X - No stop offs
1 - First stop off
2 - Second stop off
3 or 4 - Subsequent stop offs
5 - SEAVAN destination entered in cc 47-52 of T-2 card.
68-73 Pieces from SU record.
74-76 Weight from SU record.
77-80 Cube from SU record.
29

27

Build Prime Shipment Unit data TOMD T-4 for each SU:

CC	Data
1	Constant T.
2	J if type cargo code (4th pos. of WCC from SU record) is A, C, F, G, I, J, K, L, O, P, R, S, T, V, W, X or Y; otherwise, X.
3	Constant 4
4-8	SEAVAN Number, duplicate from T-2 card
9-14	DoDAAC of shipping activity from Table and Control File
15-19	Water Commodity Code from SU record
20	Blank
21-27	Duplicate from T-2 card
28-29	Type Pack Code from SU record
30-46	TCN from SU record
47-52	Consignee AAC from SU record
53	Transportation Priority from SU record
54-56	Required Delivery Date from SU record
57-59	Project Code from SU record
60-62	Duplicate from T-2 card
63	X - No stop offs 1 - First stop off 2 - Second stop off 3 or 4 - Subsequent stop offs 2 - SEAVAN Destination entered in cc 47-52 of T-2 card
64-67	Transportation Account Code (computed per App. D-166)
68-71	Pieces from SU record
72-76	Weight from SU record
77-80	Cube from SU record

28

APPENDIX D-199

SEAVAN TRANSSHIPMENT RECEIPT TRANSACTION PROCESSING

1. INITIATING ACTION

Input via CRT of materiel receipt information for transshipment.

2. REFERENCES

Appendix B-283, SEAVAN Receipt Transaction for Transshipments.

3. GENERAL

This function records receipt of materiel for transshipment processing. If advanced TCMD information has been received prior to materiel receipt a Type 3 (transshipment) MRO shipment planning record is prepared for Automated SEAVAN Shipment Planning. If TCMD has not been received the TCN is output on the F-216, Transshipment Error List, so that action may be initiated to obtain TCMD data.

4. OUTPUT

a. F-216, SEAVAN Transshipment Error List.

b. Type 3 (Transshipment) MRO Shipment Planning Record.

APPENDIX D-201

SEAVAN ADVANCED TCMD PROCESSING

1. INITIATING ACTION

Input of TCMD documents received via AUTODIN or through data entry system.

2. REFERENCES

Appendix B-281, SEAVAN Advanced TCMDs for Transshipments.

3. GENERAL

This function edits and validates TCMDs for transshipments which are processed to the Automated SEAVAN Shipment Planning module. These transactions are maintained for preparation of the TCMD documentation when shipment is completed. They are also used to assure intransit materiel arrives at the transshipment point. If a receipt is not recorded by ETA, plus eight days, the TCN will be output on the F-216, SEAVAN Transshipment Error List, for necessary followup action.

4. OUTPUTS

a. Transshipment TCMD File.

b. F-216, SEAVAN Transshipment Error List.

c. Internally generated Type 3 MRO Planning Record.

APPENDIX D-210

MASS CANCELLATION INITIATION

1. INITIATING ACTION

Modification of table 16, appendix B-66, part P.

2. GENERAL

This chart represents processing mass cancellation initiation. Upon receipt of mass cancellation notification operating personnel input the appropriate data into the mass cancellation parameter table via CRT. The process flags all in-process records for the indicated parameters. If MRO records are in the workload bank, all processing is suspended; if they have been documented but not shipped they are output to the F-69 report. Actual cancellation of these records is accomplished upon receipt of DIC AC7 (MRO Mass Cancellation Card) as depicted in appendix D-43.

3. OUTPUTS

Appendix F-69, Part 3, Sections A and B, and Part 4, Notice of Cancellation Request Report.

APPENDIX D-214

PROCESSING SPECIAL PURPOSE DATA (SPD) COUNTS

1. INITIATING ACTION

a. Normal processing of Materiel Release Orders (MRO)/Disposal Release Orders (DRO), Material Movement Document (MMD), Long/Short Form Stow Notices, Bin Replenishments, and Rewarehousing documents.

b. Use of Program, $$UWFB70, by Area Control Branch personnel to update the MRO In-Process File.

2. REFERENCES

a. Appendix B-178, Receiving SPD Master Record.

b. Appendix B-179, Receiving SPD Activity Record.

c. Appendix E-111 P, On-Line Update of the BIN/Bulk Indicator in the MRO In-Process File Record.

d. Appendix B-223, SPD Work Count Record.

e. Appendix B-224, SPD Master Record.

3. GENERAL

a. This decision chart shows the logic used by the program when processing transactions to capture SPD counts in the BIN/BULK Area. Normal processing prevails except for MRO In-Process file update.

b. Materiel Release Order (MRO) processing:

(1) MRO Receipt - When an MRO (DIC A5_) is received in MOWASP, the Mandatory Date to Transportation (MDT) is computed based on its priority and the shipment destination. If the MRO is Issue Priority Group (IPG) I or II, it is considered free flowing and is released for immediate processing. At the same time, it is recorded in the MRO In-Process file. If the MRO is IPG III, it is recorded in the MRO Bank and held for future release. The same applies to all multiline MROs as well. Each day the program releases MROs for processing, based on the MDTs computed for them.

(2) MRO Release - When an MRO is dropped from the MRO Bank, it becomes an entry in the MRO In-Process file, and it has now gained a Release Date entry as well. In the meantime, the MRO processing continues through the various phases necessary to accomplish filling an MRO request, selection, marking, and packing, as applicable. The MRO (DD Form 1348-1) will be appropriately annotated by the warehouse personnel. Based on those annotations, Area Control Branch personnel will input the applicable data and the current date to the MRO In-Process file via their terminal (CRT). See paragraph 3c below, for more detail regarding the CRT operation.

(3) MRO In-Process file - Each day the SPD program scans the MRO In-Process file for Dates Offered to Transportation (DOT) that have not been counted before. This scan includes lines within multiline shipments and the Autoclear process. When it finds a new DOT it scans the transaction for the following data:

(a) Location - This is cross-referenced to identify the Work Center that should be credited with the work accomplished.

(b) Type of Location - Identifies whether the item is a Bin or Bulk Item.

(c) Shipment Offered - Indicates the method of shipment offered.

1. Shipment Via Parcel Post - Modes of Shipment Code G, H, J, 5, 6 or 7.

2. Shipment with GBL - Modes of Shipment Code other than Parcel Post plus a GBL field filled with alphanumeric entries.

3. Shipment without GBL - Modes of Shipment Code other than Parcel Post plus GBL field filled with blanks.

c. Program UWFB70

(1) The Area Control Branch personnel must determine whether an update of the MRO In-Process file is required before shipment is made, and the decision is based on annotations made by the picker and the packer.

(2) If an MRO involves a loose issue, the portion of the MRO that is filled in the Bin area will be stamped and marked so as to make it obvious that it was picked in the Bin area and not in the Bulk area.

(a) If the item is a Bin item, no special action is required.

(b) If, however, the item is a Bulk item, that portion picked in the Bin area must be clearly identified, and the In-Process file updated accordingly.

(c) If an MRO for a Bulk item is picked in the Bulk area, but is moved to the Bin area for packing, then the MRO In-Process file must be updated accordingly.

(3) To update the MRO In-Process file, initiate the Area Control Branch terminal (CRT) and call up program UWFB70 by entering $$UWFB70. See DLAM 4140.2, Volume III, Part 6, Appendix E-111 P, for screen formats, entry routines, responses, messages, etc.

(a) Basically, this program allows you to process a Bin item as a Bulk item and vice versa. This is done by changing the Bin/Bulk Indicator for an item in the MRO In-Process file only. The SPD program uses the Bin/Bulk Indicator to decide which routine to use in processing Bin or Bulk items.

(b) You will note the Bin/Bulk Indicator is not changed in Item Data for the NSN. It has only been changed in the MRO In-Process file, and when this transaction is retired to History, the Bin/Bulk Indicator reverts back to what it reads in the Item Data file. Only that one transaction has been affected.

(c) Credit is given for a pick and pack action in the Bin or Bulk area except when a Loose Issue is involved. A Loose Issue MRO is a term used to describe the issue of an MRO quantity not evenly divided by the unit of pack quantity. These are normally filled from the Bulk area plus an additional quantity (the Loose Issue) from the Bin area, therefore, credit is given for the pick and the pack in both the Bin area as well as the Bulk area.

d. Bin Replenishment Transaction

When a Bin Replenishment action is accomplished, the program will give credit also for the marking and the packaging/marking for that transaction. Bin Replenishment actions occur only in the Bin area, but credit is given for a selection in the Bulk area and a stow in the Bin area.

e. Rewarehousing Transactions

When a Rewarehousing action is accomplished in both the Bin and the Bulk area, the applicable Work Center is given credit for the selection (from) as well as the stow (to) action.

f. Split Receipt Transaction

When a Split Receipt action is accomplished in both the Bin and Bulk area, the appropriate Work Center is given credit for the stow action. The program compares the location in the ZBA Record with the locator record. If it exists already, no credit is given for the stow action.

g. Receipt Stow Transactions

When a Receipt Stow action is accomplished the program identifies whether it is a Bin/Bulk item by using the third position of the Type Storage Code. Credit is given to the Work Center by use of the first three positions of the Warehouse Location where the Stow action actually was made. One SPD count is given per line item regardless of how many locations are involved. The prime location is always credited.

h. Receipt Transactions

(1) The Materiel Receipt Transactions are processed in the Bulk Receiving and Direct Receiving as well as Central Receiving. Within each area there are four basic functions, such as:

(a) Materiel Depack and Movement.

(b) Materiel Verification.

(c) Materiel Inspection.

(d) Documentation Processing.

(2) Considering the four functions outlined in paragraph 3h above, SPD counts are credited as follows:

(a) Central, Bulk, and Direct Receiving

1. If a Verification is completed and entered, credit is given for the Depack and Move, Inspection, and Document Processing.

2. If a Verification is started by a verifier, then completed and entered by an Inspector, credit is given for the Verification, Depack and Move, Inspection, and Document Processing.

3. If an Inspector completes and enters a Receipt, credit is given for the Depack and Move, Inspection, and the Document Processing.

4. SPD counts are taken from the I/VN screens WRI130 (for Procurement receipts) and from WRI210 (for Non-Procurement receipts) only when the receipt is completed and entered.

NOTE: When a Verification and an Inspection are both involved in processing of a Receipt, the program will provide a count for both actions using the CRT Operator's Employee Identification (EID) and Receiving Site Code. If the EIDs match for each function, credit is given for one completion, however, if the EIDs don't match, credit is given for the Verification and depack and move and the other EID is given credit for the Inspection, and Document Processing is credited when the receipt is completed and entered.

i. SPD Counts/APCAPS Interface

Based on the above considerations, each transaction is categorized and an internal DIC XMS is generated for each transaction. The DIC XMS format (appendix B-223) contains a LAPERS Standard number and a SPD Count Code correlation. The DIC XMS transactions are recorded, summarized, and then reported to APCAPS via another transaction (DIC YHJ). The APCAPS can then compute workload done by whom while in the process of generating the employee payroll.

4. OUTPUT

DIC YHJ Workload Record to APCAPS.

APPENDIX E-001 P

MRO(S) RECEIVED BY TELEPHONE, MESSAGE, PILOT PICKUP, AND/OR HAND-CARRIED

1. PURPOSE

a. This procedure provides for processing of MROs received by telephone, message communication, pilot pickup, or hand-carried from the DSC/ICP.

b. Telephone communication may be used for Priority Designator 01-03 documents when any of the following conditions exist:

(1) Data pattern and narrative message facilities are not available.

(2) Pilot pickup is planned within 24 hours.

(3) Exception data is absolutely necessary to convey the true urgency of the requirement and the exception data cannot be transmitted in an exception document.

NOTE: Violations of the intent of this provision will be reported to the MILSTRIP System Administrator for corrective action. Telephone is not a desirable media due to potential for error in transcribing into card image, machine sensible format for processing. Telephone transactions will not be confirmed by submission of documents by other media.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-7, Materiel Release Order (MRO) Card.

b. Appendix C-11, Single Line Item Release Receipt Document With Address Label Attached.

c. Appendix E-007 P, Procedures for Processing Exception MROs.

d. Appendix E-011 P, Procedures for Processing Single Line Item Release/ Receipt Document (DD Form 1348-1).

e. Appendix E-163 P, Procedures for Type B Remote Inquiry (General Locator).

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Shipping Documentation Branch.

b. Applicable Warehouse Branch.

c. Operations Branch.

d. Transportation Office.

best copy available

4. PROCEDURES/INSTRUCTIONS

a. Processing MROs when the computer can meet the delivery time requirements.

(1) Shipping Documentation Branch will:

(a) Prepare MRO in appendix B-7 format on local coding sheet or use message received as source document.

(b) Forward local coding sheet or message to ODS via keypunch services.

(c) Maintain file containing MRO transcript in suspense file for 30 days and then destroy.

(2) MRO will be processed by the mechanical system and normal procedures for handling are applicable.

b. Processing MROs when the computer cycles cannot meet delivery time requirements:

(1) Shipping Documentation Branch will:

(a) Receive MRO data via telephone, message, or hand-carried.

(b) Obtain locations for materiel via Remote Inquiry (see appendix E-163 P) or use F-51 and F-52 locator listings.

(c) Prepare handscribed appendix C-16, DD Form 1348-1. Annotate locations in blocks F and W. Mark "Hand Pickup" as applicable. Hand-carry all copies for parcel post shipment to the appropriate warehouse. When shipment is to be made by freight, pull a copy and mark "Advance Copy." Hand-carry remaining copies to appropriate warehouse.

(d) Prepare source document, appendix B-7 format (see appendix E-007 P), DIC must be A55 or A5E with an 8 overpunch in pos. 3.

(e) Release DD Form 1348m to next computer cycle and place source document in suspense.

(f) Receive two copies of completed hand-carry or pilot pickup DD Form 1348-1.

(g) Receive computer prepared exception (DIC type A55 or A5E) DD Form 1348-1 flimsy. Match with completed handscribed DD Form 1348-1 copy and prepare MRO closeout document DIC ABM (see appendix E-099 P) using Shipping Unit and Line Item Number for computer prepared DD Form 1348-1. Enter shipped/offered date equal to or later than document release date.

(h) Retain one copy of computer prepared document and one copy of complete handscribed document in file for 30 days and then destroy.

(2) Warehouse Area Control Branch, Operations Branch, and Transportation Office will receive handscribed DD Forms 1348-1 flimsy marked "Hand-Carry" or "Pilot Pickup."

(a) DD Form 1348-1 flimsy and materiel will be hand-carried to each operational component.

(b) If delivery is via hand pickup, person receiving materiel will sign for the materiel in block 14 of the DD Form 1348-1 flimsy.

(c) Two copies will be hand-carried back to Shipping Documentation Branch.

c. Shipment addressing:

(1) The DoDAAD addresses apply only to Services and Civil Agencies' MROs.

(2) MILSTRIP Supplement No. 2 addresses apply only to FMS and MAP Grant Aid MROs.

APPENDIX E-002 P

UNIDENTIFIED INPUT DOCUMENTS VIOLATION REASON CODE (VRC AA)

1. PURPOSE

This procedure describes the actions to be taken in the identification and reinput of documents rejected from the MOWASP System (other than the entry routing) because the Document Identifier Code (DIC) is not valid for the document processing section to which assigned.

2. APPENDICES USED IN THIS PROCESS

The Violation Reason Code AA appears on the Violation Printout, appendix F-85, for any MOWASP input document with an invalid DIC.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The MOWASP Data Control Branch, Management Support Office, Directorate of Storage and Transportation is responsible for the identification and reinput of these valid documents.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. The Violation Reason Code AA indicates that the DIC, usually found in pos. 1-3 of card input, is not authorized for the mechanical process to which assigned.

NOTE: Input documents bearing a DIC which is not valid to the systems are rejected by the entry process on a MOWASP Entry/Exit Exception List, appendix F-113. For information there are a number of documents for which the entry process only checks the first two positions of the DIC.

b. Personnel of the MOWASP Data Control Branch, upon receipt of the Violation Printout, appendix F-85, containing an unidentified input document will:

(1) Manually compare the column-by-column entries of the invalid document against each of the B appendices, of DLAM 4140.2, Volume III, to identify the format of the rejected document.

(2) Determine the correct DIC using the B appendix, the "Alphabetic Index of B Appendices," the "Cross-Reference of Document Identifier Codes to Applicable B and D Appendices" or the sequential listing of DICs listed in appendix A-1.

c. In the event processing personnel cannot identify the correct format or DIC involved, from review of the B appendices, screen the Violation Printout for a three-position entry which could represent the Routing Identifier Code (RIC) of a submitting DSC (i.e., S9C, S9E, S9I, etc.).

(1) When such an entry is found, contact the prospective DSC (transceiver communication element), by telephone, furnishing all details from the Violation Printout to include the probable date of receipt (date of Violation Printout) and request review of recent card transmissions to identify the rejected document.

(2) On receipt of the DSC reply indicating a probable DIC, locate and review the applicable B appendix to confirm/reject the DSC suggestion.

d. Should it be impossible to identify a possible submitting DSC and when the rejected document appears to be a locally originated input, screen the Violation Printout for a two-position entry which could represent a Functional Routing Code (FRC) of an operating individual or organization.

(1) When such an entry is found, contact the prospective individual or supervisor of the organizational element, represented by the FRC, by telephone, furnishing all details from the Violation Printout, to include the probable date of submission (date of Violation Printout) and request assistance in identification of the reject.

(2) On receipt of the reply from the prospective individual or supervisor indicating the correct DIC, locate and review again the applicable B appendix to confirm the suggestion.

e. When processing personnel, with assistance from the prospective submitting DSC or submitting FRC, cannot positively identify the correct DIC for the rejected document, the Violation Printout, appendix F-85, will be suspended within the MOWASP Data Control Branch for a period of seven days. This suspense period will allow operating personnel of other Branches/Offices/Divisions to query the MOWASP Data Control Branch in the event an expected output is not received. On the expiration of the 7-day suspense, and when an inquiry identifying the correct input document, is not received, the Violation Printout, appendix F-85, will be destroyed.

5. REENTRY INSTRUCTIONS

a. When the correct DIC has been identified, annotate the correction directly below the erroneous DIC, usually pos. 1-3, and directly above the asterisks marking the error on the Violation Printout. A distinctive colored pencil will be used for ease in key punching.

b. Forward the annotated Violation Printout to the Office of Data Systems, via key punch services, for preparation of a new input document and reentry into the applicable process.

APPENDIX E-003 P

MRO AND/OR EXCEPTION DATA INPUT

1. PURPOSE

Provide the capability to input MRO and/or Exception Data Via CRT, with option of printing the DD Form 1348-1 on-line at Depots where DWASP has not been implemented. At DWASP Depots, this process provides options for printing a pick ticket or an Issue Release Receipt Document (IRRD).

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-131.

b. Appendix C-11.

c. Appendix D-4.

d. Appendix D-41.

e. Appendix D-104.

f. Appendix F-109.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General - This process will perform any of the following tasks.

(1) Input MRO, Display MRO On-Line, Print DD Form 1348-1 at non-DWASP Depots, print pick ticket or IRRD at DWASP Depots.

(2) Exception Data. Add, Inquire, Change, Delete.

(3) Exception Address. Add, Inquire, Change, Delete.

b. CRT Initialization.

(1) Key in $$UWSN05.

(2) Depress ENTER key. This will dedicate the CRT to MRO Input. See figure 1 below, for example.

c. For MRO input at non-DWASP Depots select Action Code A. At DWASP Depots, enter A to print pick ticket or B to print IRRD. Enter required data elements, for 80 columns of the MRO.

(1) To release on-line DD Form 1348-1, pick ticket or IRRD, enter R in the REL-IND. Enter B in the REL-IND if item is to go to MOWASP batch process. All A5J, C5_, and DICOMSS MROs must be processed through batch, on-line print is not allowed.

(2) Location may be entered for any MRO. Location must be entered for part number MRO. Location will be obtained from locator on NSN MROs if one is not entered.

(3) Supplementary location elements Lot Date Code (LDC) and Commercial and Government Entity (CAGE) codes may be entered in fields titled LDC and CAGE. These elements function as supplementary location select keys for JAN Class S parts. When these fields are updated, it is essential that the LDC and CAGE codes are also added as exception data to assure print on the DD Form 1348-1 for location verification.

(4) For Part Number (P/N) MROs, a Y must be entered into Part Number (PRT-NBR) field, so as to eliminate search in locator file. Enter item data as necessary for Part Number MRO. Document Identifier Code on Part Number MRO must be A52 or A5B. Exception data and/or address may be entered on Part Number MROs. However it is not mandatory.

(5) Exception MRO A55, A5E, C55, C5E or A5J with Z in pos. 72, you must have exception data and as required exception address. If exception address only, you must enter something in exception data. If no exception data, enter "No Exception Data."

(6) If data input is applicable to additional MROs, put Y in REPEAT-MRO REPEAT-DATA and REPEAT ADDR as necessary. This will cause the program to leave the data on the screen after successful input. This will make it possible for data on screen to be used in the following MRO input.

(7) Visually verify data input on the CRT screen. Enter data into computer by depressing ENTER key on CRT. An error that may be encountered will have the cursor placed under the area in error and an error message printed at the bottom of the screen.

d. To obtain reprint of DD Form 1348-1 or pick ticket, enter R into Action Code area of screen along with the document number. Depress ENTER key for reprint. Note: This option can only be requested on the day the MRO was entered. If an IRRD was originally requested, a reprint will not be generated. The error message REPRINT RECORD NOT FOUND will display.

e. Exception Input F-109. This program also allows for input of just exception data and exception address to accommodate exception MROs which were received into the system via AUTODIN and suspended on the F-109, Suspended Exception MROs for missing exception data.

(1) Enter A in action code.

(2) Enter document number in document number field.

(3) Enter exception data and as necessary exception addresses.

(4) If data input is applicable to additional MROs enter Y.

(5) Depress ENTER key. Error messages will be output. Make necessary corrective action and reenter.

f. Exception and Address Data may be inquired, changed or deleted. Action Codes are as follows:

I = Inquire
C = Change
D = Delete

g. For input of Direct Vendor Delivery Medical (DVD) items operator will enter Action Code M and document number. Depress ENTER key. This will result in output of MRO data from CRQ file if available. The document identifier will be CRQ. The operator does not need to charge the DOC ID, the program will update it to AD2/A51 on reinput. If no record is found, input per subparagraph c above. Operator should change Action Code to A, verify/alter data elements as necessary. Operator will enter Y in the Partial Indicator field (PAR IND) when there is a partial shipment. Visually verify data input on the CRT screen. Enter data into computer by depressing ENTER key on CRT. Successful input will result in either an MRO being produced on-line or in normal MOWASP batch process.

h. Action Code X will be used to reverse on-line MROs during the same day. For on-line MROs only, not for batch.

i. Error Messages/Action:

ERROR MESSAGE	CAUSE/ACTION
INVALID ITEM DATA	Probable Cause: Keyed in wrong.
	Action: Verify and reenter.
DUPLICATE MRO	Probable Cause: Previously input or key in error.
	Action: Verify and reenter if key in error.
INVALID ACTION	Probable Cause: Invalid operator entry.
	Action: Enter proper code.
DICOMMS MRO RELEASE THRU BATCH	Probable Cause: Attempting to print DICOMSS MRO on-line.
	Action: Remove R from REL-IND field.

ERROR MESSAGE	CAUSE/ACTION
SUBSISTANCE TYPE PACK CODE	Probable Cause: Improper Input. Action: Enter proper pack code.
EXCEPTION OR ADDRESS MANDATORY	Probable Cause: MRO is A55/A5E, C55/A5E, A5J with Z Management Code. Action: Place Exception of Address Information in required field.
EXCEPTION RECORD NOT FOUND	Probable Cause: Not on file. Action: Research and add exception information if necessary.
DUPLICATE EXCEPTION RECORD	Probable Cause: Record already on file or key in error. Action: Verify input or inquire and change information necessary.
REPRINT RECORD NOT FOUND	Probable Cause: Record never printed, MRO was entered the previous day, an IRRD was originally printed, or invalid document number entered. Action: Verify input and if wrong document number was entered, reenter.
INVALID INDICATOR	Probable Cause: Operator error. Action: Reenter proper indicator.
NOT EXCEPTION MRO	Probable Cause: Attempting to enter Exception Data and for MRO which is not A55/A5E, C55/C5E or A5J with Z Management Code. Action: No exception information required.
VALIDATION ERROR (Two-position validation Reject Code plus message.)	Probable Cause: MRO data are in error. Refer to appendix B-131 for validation criteria. Action: Correct and reenter.
CAGE MANDATORY WITH LDC	Probable Cause: LDC data were entered with no accompanying CAGE code. Action: Correct and reenter.

ERROR MESSAGE	CAUSE/ACTION
LDC MANDATORY WITH CAGE	Probable Cause: CAGE data were entered with no accompanying LDC. Action: Correct and reenter.

APPENDIX E-004 P

HAZARDOUS MATERIEL PACKAGING AND TRANSPORATION FILE MAINTENANCE

1. PURPOSE

This procedure outlines the actions necessary to establish and maintain the Hazardous Materiel Packaging and Transportation File. The file created as a result of the data entry actions provides data pertinent for packaging specialists to properly pack and certify hazardous freight documents.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-33.

b. Appendix B-13.

c. Appendix B-66, Part G.

d. Appendix D-32.

e. Appendix F-79.

3. RESPONSIBLE ORGANIZATION ELEMENTS

a. Transportation and Shipping Division, DS/T.

b. Warehousing Division, DS/T.

4. PROCEDURES AND INSTRUCTIONS

a. There are nine sections in this procedure:

(1) Heading Information.

(2) DOT Mode.

(3) IMO Mode.

(4) IATA Mode.

(5) 4145.3 Mode.

(6) UPS Mode.

(7) Maintenance and Printing OSHA Labels.

(8) FSCM Name and Address.

(9) Optional Reports.

b. To initialize the CRT, key in $$UWFR85 and depress the ENTER key. If the entry is successful, the following menu will display:

```
 UWFR85          HAZARDOUS MATERIALS PACKAGING AND TRANSPORTATION
SECTION-CODE:

SECTION-CODES:
       H = HEADING INFORMATION
       D = DOT MODE
       I = IMO MODE
       A = IATA MODE
       4 = 4145-3 MODE
       U = UPS MODE
       O = MAINTENANCE AND PRINTING OSHA LABELS
       F = FSCM NAME AND ADDRESS
       R = OPTIONAL REPORTS

PRESS SF1 KEY TO RETURN TO MAIN MENU
```

c. The cursor will be positioned in the area provided for entry of a section code.

d. To access the section for Heading Information, enter an H in the section code field and depress the ENTER key. If the entry is successful, the following menu will display:

```
 UWFR85          HAZARDOUS MATERIALS MENU FOR HEADING INFORMATION
SECTION-CODE: H

ACTION:    NIIN/PART-NMBR:                  FSCM:        VARIATION:

ACTIONS:
   I = INQUIRY
   M = MODIFY
   D = DELETE
   A = ADD
   L = ADD LIKE DATA

PRESS SF1 KEY TO RETURN TO MAIN MENU
```

e. Data Entry Actions

(1) Add - Header Information. To add a record to the Hazardous Materials Packaging and Transportation File, the operator must enter Action Code A, a NIIN or part number, an FSCM Code (only if two manufacturers have produced material with the same stock number and different chemical composition), and a

variation number (only if a single manufacturer changes the chemical composition of a product but not the part number). Depress the ENTER key. Entry of these elements will bring up the following display:

```
 UWFR85          HAZARDOUS MATERIALS ADD/MODIFY HEADING INFORMATION
SECTION-CODE:  H

          NIIN/PART-NMBR:                  FSCM:        VARIATION:

DATE-OF-LAST-CHANGE:                       USED FOR BASIC RECORD ONLY

FLASH-POINT:  63 DEG F                          METHOD:  TOC
REPORTABLE-QTY:                                 STOCK-CLASS:  6810
EXEMPTION-DATE-NMBR:  00000

FORM-FLAG-DATA:
TRANS-IDX:
NAME-RADIONUCLIDE:
RADIOACTIVITY:

WASTE:
PRESS SF1 KEY TO RETURN TO MAIN MENU  PRESS SF2 KEY TO RETURN TO HEADER MENU
```

NOTE: A new section code may be entered by positioning the cursor in the Section Code Field or a new Action Code and NIIN/Part Number by positioning the cursor at those fields.

(3) Delete - Heading Information. To delete a record from the Hazardous Materials Packaging and Transportation File, the operator must enter Action Code D, a NIIN or part number, an FSCM Code (if applicable), and a Variation Code (if applicable). Depress the ENTER key, if a match is made to the record, the following message will appear:

```
 UWFR85-11  PRESS SF3 KEY TO CONFIRM DELETE ELSE REENTER
```

If the SF3 Key is depressed the delete action will be accomplished. If an attempt is made to delete a NIIN record and the Variation Code is equal to 02, the following display will appear:

```
 UWFR85          HAZARDOUS MATERIALS DELETE MULTI-FLAG EQUAL 02
SECTION-CODE:  H

ACTION:     D  NIIN/PART NUMBER:              FSCM:        VARIATION:

ENTER THE OTHER FSCM AND VARIATION            FSCM:        VARIATION:

PRESS SF1 KEY TO RETURN TO MAIN MENU  PRESS SF2 KEY TO RETURN TO HEADER MENU
```

Enter the FSCM Code and the Variation Code (if applicable) of the record that will become the new master record.

(4) Modify - Heading Information. To modify or change data in a record, the operator must enter Action Code M, a NIIN or part number, an FSCM Code (if applicable), and a Variation Code (if applicable). If successful the following display will appear:

```
 UWFR85          HAZARDOUS MATERIALS ADD/MODIFY HEADING INFORMATION
SECTION-CODE:  H

          NIIN/PART-NMBR:  009838551       FSCM:        VARIATION:

DATE-OF-LAST-CHANGE:  85298                USED FOR BASIC RECORD ONLY
NET-QTY-PER-PKG:  1 GL                     FSCM:        VARIATION:
NEUTRALIZING-MAT:
BOILING-POINT:  180 DEG F                      MULTI-FSCM-FLAT:  00
FLASH-POINT:  63 DEG F                         METHOD:  TOC
REPORTABLE-QTY:                                STOCK-CLASS:  6810
EXEMPTION-DATE-NMBR:  00000                    HCC:  N2

FORM-FLAG-DATA:
TRANS-IDX:
NAME-RADIONUCLIDE:
RADIOACTIVITY:

WASTE:
PRESS SF1 KEY TO RETURN TO MAIN MENU  PRESS SF2 KEY TO RETURN TO HEADER MENU
```

Make all changes to the data displayed and depress the ENTER key, if successful, the display will return to you with the new modifications.

(5) Add Like Data - Heading Information. When several NIINs are similar in content, it is possible to use data from one record to build new record(s) without entering each one individually. Enter Action Code L, the NIIN or part number, the FSCM Code (if applicable), and the Variation Code (if applicable) of the record you want to copy. Depress the ENTER key. If the entry was successful, the following display will appear:

```
 UWFR85          HAZARDOUS MATERIALS LIKE HEADING INFORMATION
SECTION-CODE:  H

          NIIN/PART-NMBR:                  FSCM:        VARIATION:

DATE-OF-LAST-CHANGE:  85298                USED FOR BASIC RECORD ONLY
NET-QTY-PER-PKG:                           FSCM:        VARIATION:
NEUTRALIZING-MAT:
BOILING-POINT:  180 DEG F                      MULTI-FSCM-FLAT:  00
FLASH-POINT:  63 DEG F                         METHOD:  TOC
REPORTABLE-QTY:                                          STOCK-CLASS:  6810
EXEMPTION-DATE-NMBR:  00000                    HCC:  N2

FORM-FLAG-DATA:
TRANS-IDX:
NAME-RADIONUCLIDE:
RADIOACTIVITY:

WASTE:
PRESS SF1 KEY TO RETURN TO MAIN MENU  PRESS SF2 KEY TO RETURN TO HEADER MENU
```

The cursor will position itself at the NIIN/PART NUMBER field. Enter the NIIN number of the record you are building, an FSCM Code (if applicable) and a Variation Code (if applicable). Add or change any data element that applies and depress the ENTER key. If successful, a new Header record will be built and the display that is returned is the new record. You can continue to build more records in the same manner or depress SF1 or SF2 keys to return you to the menus.

(6) The following display is for DOT Mode information and records can be added, deleted, inquired, modified and ADD LIKE DATA in the same method as outlined for the Heading Information in subparagraph e(1) through e(5):

```
UWFR85          HAZARDOUS MATERIALS INQUIRY DOT MODE INFORMATION

MANUFACTURER ADDRESS:

MANUFACTURER TELEPHONE NUMBER:
HAZARD WARNING:

Enter the number of labels required up to twenty. If more than twenty labels are required, enter as many request of 20 as needed to fill the requirement.

(12) A manufacturer's name and address must be established in the file before an OSHA Label can be printed. To establish these elements enter Section Code F and depress the ENTER key. A successful entry will bring up the following display:

UWFR85 HAZARDOUS MATERIALS ADD/MODIFY FOR FSCM NAME AND ADDRESS
SECTION-CODE: F

ACTION: FSCM:

FSCM:
MANUFACTURER-NAME:
MANUFACTURER-ADDRESS:

PHONE:
PRESS SF1 KEY TO RETURN TO MAIN MENU PRESS SF2 KEY TO RETURN TO FSCM MENU

Enter all available data and depress the ENTER key. A successful entry will establish the record. Records can be deleted, modified and ADD LIKE DATA in the same method as outlined for the Heading Information in subparagraphs e(1) through e(5).

(13) The Optional Report printing action can be initiated with input in this program but should be coordinated with Data Services beforehand. To request reports, enter Section Code R and depress the ENTER key. A successful entry will bring up the following display:

```
 UWFR85          HAZARDOUS MATERIALS OPTIONAL REPORTS
SECTION-CODE:  R

PART I NIIN/PART NUMBER WITH OSHA LABEL LISTING:  Y

PART II NIIN/PART NUMBER LISTING:  Y

PART III OSHA LABEL LISTING:  Y

PART IV NIIN/FSCM CROSS REFERENCE:  Y

PART V NIIN/FSCM WITHOUT OSHA DATA:  Y

PART VI FSCM NAME AND ADDRESS LISTING:  Y

PRESS SF1 KEY TO RETURN TO MAIN MENU
```

Anything other than spaces after the colon will generate a report. If a report is not desired, enter a space after the colon.

5. ERROR MESSAGES

Program validation will identify error conditions and return the entry display with the corresponding Error Message at the bottom of the display. The cursor will be positioned at the field containing the error. The Error Messages, with probable cause and corrective action information are as follows:

ERROR MESSAGE	CAUSE/ACTION
NO RECORD FOUND	Probable Cause: An inquiry was made to a record that has not been established. Action: Verify the input and reenter or establish a new record.
ACTION MUST BE I, M, D, A, OR L	Probable Cause: An incorrect action was entered. Action: Verify the input and reenter.
RECORD ALREADY ON FILE	Probable Cause: An attempt was made to establish a duplicate record. Action: Verify the input and reenter.

ERROR MESSAGE	CAUSE/ACTION
HEADER RECORD MUST BE BUILT FIRST	Probable Cause: An attempt was made to establish a Mode or OSHA record when a Header record has not been established first. Action: Establish a Header record for the NIIN or part number in error.
ATTEMPT TO DELETE BASIC HAVING MULTI NIINS	Probable Cause: Self-explanatory. Action: All other records must be deleted before the Basic Record can be deleted.
MANDATORY ENTRY	Probable Cause: Self-explanatory. Action: The cursor will position itself at the mandatory field. Input the data and reenter.
INVALID ADD ACTION	Probable Cause: An add action was made to establish a NIIN record with a FSCM Code and the basic record is on file without the FSCM Code. Action: Modify the basic record by adding the FSCM Code and reenter the new NIIN.
MUST BE A E OR SPACE	Probable Cause: An attempt was made to enter other than A, E or space in the Hazard Flag field. Action: Verify the data and reenter.
MUST BE UN, NA OR SPACE	Probable Cause: Invalid entry in first two positions of the Hazard Item ID field. Action: Verify the data and reenter.
MUST BE NUMERIC	Probable Cause: An alpha entry was made in the last two positions of the Hazard Item ID field. Action: Verify the data and reenter.
NEW BASIC RECORD CANNOT MATCH DELETE RECORD	Probable Cause: A delete was entered to a NIIN record with a Multi-Flag 02. When asked to enter the FSCM of the new or remaining Master record, the same FSCM was entered as the FSCM with the delete action code. Action: Research and enter the FSCM of the NIIN record that will become the new basic record.

ERROR MESSAGE	CAUSE/ACTION
MUST ENTER FSCM	Probable Cause: An action was made to add a record for a NIIN that had multiple FSCMs without identifying the FSCM Code. Action: Reenter the data with a FSCM Code.
MUST BE Y, N OR SPACE	Probable Cause: The first position of the Limited Quantity field must be equal to Y, N or spaces. Action: Verify the data and reenter.
CAN ONLY INQUIRE FROM THIS TERMINAL	Probable Cause: An attempt was made to add, modify or delete data from a terminal that has not been authorized for this type of action. Action: Input data throughout an authorized terminal.
MUST BE N, S OR SPACE	Probable Cause: An attempt was made to update the Radioactive Form field with other than N, S or space. Action: Verify the data and reenter.
MUST BE GAS, SOLID, LIQUID OR SPACES	Probable Cause: An attempt was made to update the Radioactive Data field with other than the authorized data. Action: Verify the data and reenter.
TABLE 03 LOAD ERROR UNABLE TO PRINT	Probable Cause: Table 03 of the Table and Control File needs to be updated by Data Services to establish an OSHA Terminal/Printer cross-reference in order to print OSHA Labels. Action: Notify Data Services.
MUST BE Y OR SPACE	Probable Cause: The second position of the Limited quantity field must be equal to Y or spaces. Action: Verify the data and reenter.
CANNOT PRINT MORE THAN 20 LABELS	Probable Cause: An attempt was made to print more than twenty labels at one time. Action: Verify the data and reenter. If more than twenty labels are required, repeat the request until the required number of label are satisfied.

ERROR MESSAGE	CAUSE/ACTION
LABEL RECORD NOT BUILT	Probable Cause: An attempt was made to print OSHA labels for a nonexisting record. Action: Establish an OSHA Record for the label being requested.
CANNOT PRINT PART I AND PART II AT THE SAME TIME	Probable Cause: Attempted to print Part I (NIIN/Part Number with OSHA Data) and Part II (NIIN/Part Number) at the same time. Action: Verify request if both listings are required print on different days.

APPENDIX E-005 P

NOTICE OF CANCELLATION REQUEST REPORT
PARTS 1, 2, 3 AND 4

1. PURPOSE

This procedure describes the method for processing Notice of Cancellation Request Report (appendix F-69). This report is generated:

a. When an MRO cancellation request (DIC AC6/AC7) is received for an MRO that has been released by the computer into the processing cycle for shipment.

b. Part 2, when a MRO has been shipped but action to intercept at terminal must be taken.

c. Part 3, Section A, when MROs which have been documented not shipped and have been flagged for mass cancellation processing.

d. Part 3, Section B, when MROs have been flagged for mass cancellation processing and have been suspended in the MRO workload bank seven days past the cancellation flag date.

e. Part 4, when a DIC AM_ with 555 in the RDD (pos. 62-64) has been received on an MRO which is in process or when cancellation parameters have been deleted and MROs for the parameters have been previously documented.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-12, Advice and Status Codes.

b. Appendix A-42, Action Codes.

c. Appendix B-48, Shipment Diversion Authorization.

d. Appendix B-49, Shipment Diversion Confirmation/Denial.

e. Appendix B-50, Shipment Hold Authorization.

f. Appendix B-51, Shipment Hold Acknowledgement.

g. Appendix B-52, Shipment Hold Disposition.

h. Appendix B-81, Cancellation Request Answer.

i. Appendix B-94, Supply Status Card.

j. Appendix B-99, MRO Control/Status Request Card.

k. Appendix B-115, MRO Register/History Inquiry.

l. Appendix C-11, Single Line Item Release/Receipt Document.

m. Appendix D-43, Cancellation Processing.

n. Appendix D-57, Daily History File Analysis.

o. Appendix D-210, Mass Cancellation Initiation.

p. Appendix D-211, Mass Cancellation Daily Processing.

q. Appendix E-008 P, Preparing a Reply to Cancellation Request.

r. Appendix F-67, MRO Register/History Inquiry Answer.

s. Appendix F-69, Notice of Cancellation Request Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Part 1, Part 3 - Sections A and B, Part 4 - Shipping Documentation Branch, Shipping Division; Warehousing Division; Shipment Planning Branch, Commercial Traffic Branch, Transportation Office.

b. Part 2 - Shipping Documentation Branch, Shipping Division; Commercial Traffic Branch, Transportation Office (TO).

4. PROCEDURES/INSTRUCTIONS

a. Part 1.

(1) All entries on the F-69, Part I, are for MROs in-process which qualify for cancellation processing. Every effort will be made to effect cancellations appearing on this report unless the MRO extended line item value is less than $1000.00 and has been consolidated into a shipping module, CONEX, SEAVAN or carrier owned conveyance.

(2) Shipping Documentation Branch will:

(a) Forward number one copy of F-69 report with or without Date to Transportation (DTT) to the Shipment Planning Branch, and all others to responsible Area Control Points, Warehousing Division.

(b) Establish suspense file of F-69 reports.

(3) Shipment Planning Branch will receive F-69 and process as follows:

(a) Search for the DD Form 1348-1 listed on F-69 report, whether DTT shown or not. Materiel may have been physically released to Transportation and not yet posted to F-69.

(b) If the MRO cannot be canceled, process as follows:

1. Discontinue Cancellation action.

2. Annotate F-69, "Unable to Stop Shipment," enter name and date.

3. Return F-69 report to Shipping Documentation Branch within two days.

(c) If MRO can be canceled, process as follows:

1. Attach five copies of DD Form 1348-1 to the F-69 report and return to Shipping Documentation Branch, annotated "Shipment Canceled."

2. Annotate one copy of DD Form 1348-1, "Shipment Canceled," attach to materiel and return to applicable warehouse location.

3. Corrected documents (SPW and/or DD Form 1348-1) are forwarded to Shipping Documentation Branch for correction of freight offer data (pieces, weight, cube and TCN) on partial cancellations.

(d) If unable to locate DD Form 1348-1 listed on F-69 report within two days, notify the Shipping Documentation Branch by returning annotated copy of F-69.

(4) All cancellation requests (F-69) which have no DTT will be forwarded to Warehouse Area Control Branch for processing as follows:

(a) Search for the DD Form 1348-1 listed on F-69 report.

(b) If MRO cannot be canceled, take action outlined in subparagraph c(2) above.

(c) If MRO can be canceled, take action outlined in subparagraph c(3) above.

(d) If unable to locate DD Form 1348-1 within 2 days, notify Shipping Documentation Branch by returning annotated copy of F-69 report.

(5) Shipping Documentation Branch will receive annotated F-69 reports from the processing areas and take the following actions:

(a) Match with suspense copy.

(b) If cancellation was accomplished and MRO is a non-MOFAST document, prepare MRO Control/Status Request Card (DIC ZBM) with Action Code DC and process. If cancellation is to be accomplished in MOFAST use program $$UWFH25.

1. Annotate F-69 report "Cancellation Completed."

2. File annotated F-69 report.

3. Destroy DD Form 1348-1.

(6) If F-69 reports are received with annotation "Unable to Locate DD Form 1348-1," proceed with following:

(a) Prepare and process an MRO Register/History Inquire, appendix B-115.

(b) Receive and review MRO Register/History Inquiry Answer, appendix F-67.

1. If MRO has been denied, file annotated F-69, part 1, report and destroy the F-67 printout.

2. If the MRO is still open for processing, notify responsible element to reprocess the F-69 as outlined in subparagraphs (4) and (5) above.

(7) Take the following action if research in subparagraph f above indicates item was shipped or F-69 is annotated "Unable to Cancel."

(a) If cancellation was an AC6 and MRO meets all of the following criteria, prepare an AE6/AEJ with Status Code B9 and continue processing cancellation in the same manner as cancellations on F-69, part 2.

1. Shipped Overseas.

2. Single line with total value greater than $200.00. If shipped in a SEAVAN, MRO total value must be greater than $1000.00.

3. Shipped by surface freight less than 36 days ago.

4. Shipped by air freight less than 11 days ago.

(b) If AC6 cancellation does not meet criteria in subparagraph (a) above, discontinue processing and file F-69.

(c) If cancellation was AC7 and item has been shipped more than 45 days ago, prepare an AE6/AEJ with Status Code B8.

(d) If cancellation was AC7 and item was shipped less than 46 days ago, prepare AU7 in same format as appendix B-14.

(8) Completed F-69, part 1, reports will be retained in file for 30 days, then destroyed.

NOTE: If multiple AC6s for an MRO are received, multiple F-69s will be produced. The quantity of each and every AC6 received must be subtracted from the MRO quantity to be shipped. Method of input to MOWASP system by single or multiple DIC ZBMs will be at depot option.

b. Part 2.

(1) The Cancellation Request Report will be produced for AC6 cancellations when the system determines the item to be canceled has been shipped and meets the criteria established. Report will not be produced and action to intercept shipment at terminal will not be taken for:

(a) Items consolidated in a multiline shipment unit.

(b) Items shipped to CONUS customers by any mode.

(c) Items shipped to overseas customers 35 days prior to receipt of the cancellation request, for freight modes or 10 days prior to receipt of cancellation by air modes.

(d) Items shipped to overseas customers by air or parcel post.

(e) Single line item shipment units having a total dollar value of less than $200.

(2) When F-69, part 2, report is received for item that has been released in a shipment destined for overseas:

(a) Request Bill of Lading information on item from the Commercial Traffic Branch, Transportation Office.

(b) On receipt of transportation information on item, initiate action as prescribed in Military Standard Transportation and Movement Procedure (MILSTAMP). Extract information from F-69 and prepare documentation. The format of the report contains a column "NEW ADDR" that will indicate the address to which the DSC desires shipment to be diverted (pos. 45-50 of DIC AC6), or when blank, will indicate shipment is to be held at terminal for further instructions. Accordingly, prepare appendix B-48, DIC TM2 for Shipment Diversion or appendix B-50, DIC TM3, Shipment Hold Authorization and process to the applicable Water Terminal Clearance Authority (WTCA). Annotate actions on the appendix F-69 and place report in suspense.

1. Check suspense file daily.

2. When five working days have elapsed without response from the WTCA, prepare another appendix B-48 or B-50 as applicable and process to the WTCA as a followup.

3. When five working days have elapsed without response from the WTCA, prepare a second followup as above.

4. When five additional working days (total of 15 days from first notice) have elapsed without response from the WTCA, prepare reply to cancellation request-shipment status (DIC AU_) for processing to the DSC/ICP IAW appendix E-080 P. Annotate actions to the appendix F-69 and file. Retain file for 45 days then destroy.

(3) Upon receipt of reply from WTCA, match to entry on appendix F-69 and take action as follows:

(a) Receive appendix B-51, DIC TMC Shipment Disposition Instructions Request, contact activity (DSC/ICP) in pos. 24-29 which authorized the shipment hold and obtain necessary information concerning the alternate consignee and the Transportation Account Code. Prepare DIC TMS, appendix B-52, Disposition Instructions Document and process to notify WTCA of shipment instructions. Annotate actions on appendix F-69.

(b) Receive appendix B-51, DIC TML, Shipment Hold Denial, prepare applicable AU_ document with POE in pos. 51-53 and date in pos. 57-59 provided by WTCA, process to notify DSC of shipment and annotate actions on appendix F-69.

(c) Receive appendix B-51, DIC TMT, Shipment Hold Acknowledgement and annotate to appendix F-69. No further action required.

(d) Receive appendix B-49, DIC TMK, Shipment Diversion Denial. Prepare applicable AU_ document with POE in pos. 51-53 and date in pos. 57-59 provided by WTCA. Process to notify DSC of Shipment. Annotate actions on appendix F-69.

(e) Receive appendix B-49, DIC TMB, Shipment Diversion Confirmation. Prepare appendix B-81, DIC AG6, Cancellation Request Answer Card, with Status Code B6 in pos. 65-66 and process to notify DSC of action taken. Annotate action to appendix F-69. See note below.

(4) File annotated appendix F-69, part 2, report.

(5) Complete appendix F-69, part 2, reports will be retained in file for 45 days, then destroyed.

NOTE: If alternate consignee is a depot in the DLA Distribution System, the RIC of that depot will be put in pos. 62-64; but, if alternate consignee is a customer installation, pos. 62-64 will be left blank to indicate to DSC the PMRC is not required.

(6) Depot will furnish status of cancellation actions within five days of receipt of AC_ or AK_ documents. This status will be updated as further actions are taken on the cancellations request.

c. Part 3, Section A.

(1) This part and section of the F-69 is produced for mass cancellation of documented MROs which must be suspended from processing pending receipt of an AC7.

(2) Operating personnel will attempt to isolate and suspend processing all MROs appearing on this report. Disposition of the shipment will resume when:

(a) An AC7 cancellation is received. Procedures for normal cancellation processing apply.

(b) An AM_ document modifier with RDD 555 or the mass cancellation parameters are removed from the option table. The F-69, part 4, procedures/ instructions apply.

d. Part 3, Section B.

(1) This part and section of the F-69 is produced to notify operating personnel of MROs which have been flagged for mass cancellation processing, suspended from processing for at least seven days and no corresponding AC7 received from the ICP.

(2) Shipping Documentation Branch will review the report and initiate manual followup action (preferably by telephone) to cognizant ICPs to determine the status of anticipated AC7 transactions. If the cancellations are not forthcoming initiate action to remove pending cancellation parameters from the table and control file. Once these parameters are removed from the table the MROs will be released for normal processing automatically.

e. Part 4.

(1) This section of the F-69 is provided whenever:

(a) A DIC AM_ with 555 in the RDD field (pos. 62-64) has been received for a corresponding documented MRO flagged for mass cancellation.

(b) A documented MRO previously flagged for mass cancellation has the cancellation flag removed by deleted criteria in the mass cancellation table.

(2) Shipping Documentation Branch will:

(a) Ascertain processing status of MRO(s) appearing on the report.

(b) If the cancellation has been effected discontinue further research.

(c) If the cancellation has not been effected notify appropriate operating personnel, depending upon processing status, that the cancellation has been rescinded and the MRO should be allowed to process accordingly.

APPENDIX E-006 P

INVESTIGATING CUSTOMER COMPLAINT (SHIPMENT) (EXCLUDING LOST AND ASTRAY FREIGHT)

1. PURPOSE

To provide guidance for the investigation and reporting of customer complaints related to discrepancies in shipments made by the Directorate of Storage and Transportation.

2. REFERENCES/APPENDICES USED IN THIS PROCESS

a. DLAR 5705.1, Reporting of Security/Criminal Incidents.

b. Chapter 7, Physical Inventory Procedures.

c. Chapter 68, Receipt, Storage and Issue of Controlled Substances, Sensitive Drug Abuse Control and Pilferable DLA Items.

d. Appendix A-3, Customer Complaint Discrepancy Codes.

e. Appendix A-6, Customer Complaint Type of Document Codes.

f. Appendix A-57, Invalid/Valid Customer Complaint Codes.

g. Appendix A-92, Personnel Codes.

h. Appendix B-9, Customer Complaint Data Entry.

i. Appendix C-11, Single Line Item Release/Receipt Document, DD Form 1348-1.

j. Appendix C-36, Report of Discrepancy, Standard Form 364.

k. Appendix C-38, Discrepancy in Shipment Report, Standard Form 361.

l. Appendix E-092 P, Customer Complaint Data Entry.

m. Appendix E-150 P, Preparation of Report of Discrepancy (ROD).

n. Appendix E-156 P, Initiating Discrepancy in Shipment Reports.

o. Appendix F-19, Customer Complaints Listing.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Directorate of Storage and Transportation:

(1) Commissary Support Division.

(2) Quality Control Office.

(3) Transportation Division:

(a) Shipment Processes Branch.

(b) Traffic Management Branch.

(4) Inspection Branch, Receiving Division.

(5) Plans and Programs Branch, Management Support Office.

(6) Inventory Control Office.

(7) Area Control Branches, Warehousing Division.

b. Office of Command Security.

4. INSTRUCTIONS/PROCEDURES

a. Instructions.

(1) All Customer Complaints received by the depot relating to materiel shipped by the Directorate of Storage and Transportation will be forwarded to the Quality Control Office.

(2) Customer Complaint received via telephone will be documented by preparation of a Conversation Record, OF 271, in accordance with paragraph 4b(2)(a) below.

(3) Inventory, when required, will be accomplished in accordance with part 1, chapter 7 of this manual.

(4) Complaints involving Sensitive and Drug Abuse Items, part 1, chapter 68, section I of this manual, which report shortages/overages/wrong item will require an inventory and a notification to Command Security Office.

(5) Discrepancy in Shipment Report, SF 361, appendix C-38, involving lost and astray freight, will be forwarded to the Transportation Division for tracer action and not be counted as a part of the inventory of complaints received.

(6) Complaints will be assigned a suspense date of 10 work days by Quality Control Office for completion and reporting of investigation.

(7) Activities assigned investigative action will thoroughly research all aspects of the complaints and report findings to the Quality Control Office by the suspense date assigned.

b. Procedures.

(1) Quality Control Office will document any telephonic complaints IAW procedure outlined in subparagraphs (2)(a)1 and 2 below.

(2) Transportation Division, Receiving Division, Commissary Support Division, Inventory Control Office and Warehousing Division receiving complaint will proceed as follows:

(a) Telephonic complaints:

1. Prepare a Conversation Record, OF 271, containing the following data:

a. Customer involved.

b. Name and telephone number of person calling.

c. Requisition, Contract and GBL numbers as applicable.

d. National Stock Number.

e. Lot/Batch and Expiration Date if applicable.

f. Quantity involved.

g. Type of Discrepancy.

2. Request that the customer confirm the complaint on one of the following forms with a copy of the applicable Single Line Item Release/Receipt document, DD Form 1348-1, appendix C-11.

Report of Discrepancy, SF 364, appendix C-36, prepared in accordance with appendix E-150 P.

3. Forward one copy of the Conversation Record to the Quality Control Office for processing.

(b) Hard copy media:

1. Forward all copies received to the Quality Control Office.

2. Refer to appendix A-6 for hard copy media.

(3) Quality Control Office, will:

(a) Receive, record, assign for investigation, and maintain administrative control on all customer complaints except those involving lost and astray freight.

(b) Forward complaints on lost and astray freight to Transportation Division.

(c) Record each complaint using the appropriate data elements provided in appendix A-3 for inclusion in the F-19, Customer Complaint Listings.

(d) Assign investigation action to the cognizant organization by forwarding one copy of the hard copy media to the cognizant organization for use in their investigations.

(e) File one copy of the complaint by organization.

(f) Process customer complaints involving sensitive drug abuse items as follows:

1. Notify the Director.

2. Forward a copy of the complaint to the Vault Custodian, Warehousing Division and/or Supervisor, Documentation Function, Commissary Support Division when applicable, and request investigation to determine validity/cause of the discrepancy. (Complaint on unserviceable items excepted.) (See subparagraph 5 below.)

3. Forward a copy to Inventory Control Office when an inventory is required, except on tobacco products when the Commissary Support Division will research/inventory.

4. Forward a copy to the Office of Command Security as an alert of potential need to investigate.

5. Forward a copy of complaints involving unserviceable items to Inspection Branch, Receiving Division and/or DICOMSS, when applicable, to determine corrective action required for materiel in storage.

6. Forward results of the investigation to:

Director
Command Security Office

(g) Assure that responses have been received for each complaint from the assigned organization.

(4) Shipment Processes Branch, Transportation Division, will:

(a) Investigate shortages, overages, center duplicate or misdirected shipments, and missing DD Form 1348-1 types of complaints.

(b) Report findings to Quality Control Office by the assigned suspense date. The report of findings will also indicate whether the complaint is valid or invalid.

(c) Consolidate and forward complaints whose investigation reveal "No Record of MRO" and "Shipped as Billed" to Quality Control by IOM no later than the end of the reporting month.

(d) Prepare replies on complaints to customers and DSCs as required.

(5) Area Control Branches, Warehousing Division; Inspection Branch, Receiving Division; and Commissary Support Division, will:

Investigate all complaints assigned by Quality Control Office to determine validity/cause/corrective action required.

(6) Data Support Function, Plans and Programs Branch, will:

Obtain listings as requested by Quality Control Office.

(7) Office of Command Security, will:

(a) Investigate complaints involving security and drug abuse materiel upon request.

(b) Make necessary report in accordance with DLAR 5705.1.

APPENDIX E-007 P

EXCEPTION MRO(S)

1. PURPOSE

This procedure describes the method for manual processing of the A55 and A5E Materiel Release Order (MRO) and C55 or C5E IPE MRO containing exception data. These documents may be received via mail, message, telecon, or rejected by AUTODIN punch card and will be listed on appendix F-113.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-7.

b. Appendix B-175.

c. Appendix D-41.

d. Appendix D-65.

e. Appendix D-108.

f. Appendix E-001 P.

g. Appendix E-115 P.

h. Appendix F-12.

i. Appendix F-67.

j. Appendix F-113.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch.

4. PROCEDURES/INSTRUCTIONS

a. Processing personnel will establish an active suspense file of source exception data by document number sequence in two groups; (1) Priority 1-8 and (2) Priority 9-15. Review and followup action will be taken as outlined in subparagraph f below.

b. If exception MRO, exception IPE MRO, or AUTODIN punch card is received prior to receipt of source exception data, request the source exception data be furnished by the DSC/ICP reflected in pos. 67-69. For IPGs I and II, use telephone and for IPG III, send a TWX.

c. Prepare local coding data sheet in format of MRO appendix B-7 as outlined in appendix E-001 P with an 8 or 9 overpunch in pos. 3. Enter 9 in pos. 3 when Exception Data involves special address and computer is to leave shipment label blank. When the exception data involves special address data a 9 may be entered in pos. 3 to indicate that the computer is to leave the shipment table blank except for NORS and WSP data.

d. Upon receipt of disposition instructions from DSC (SF 364 or DD Form 1225) with MRO card enclosed, take the following action:

(1) Annotate suspense location on each copy and on MRO card;

(2) Reproduce and maintain a copy of disposition instructions and copy of MRO card in suspense file;

(3) Forward one copy of disposition instructions and copy of MRO card to Production Control Branch for preparation of DD Form 1348-1 (request the following be typed on the DD Form 1348-1 after computer print: Send one copy of completed MRO to Receipt Documentation Branch.);

(4) Receive DD Form 1348-1 from Production Control Branch with disposition instructions attached;

(5) Review DD Form 1348-1 to ensure exception data is complete and correct;

(6) Forward DD Form 1348-1 and copy of disposition instructions to the appropriate storage area;

(7) Select material from location printed in DD Form 1348-1, ensuring NSN, contract number or document, condition code and quantity are in agreement with requirements of the DD Form 1348-1;

(8) Forward material and DD Form 1348-1 to appropriate packing section;

(9) Pack material for shipment (material returned to contractors should be shipped by traceable means);

(10) Perform offer and/or shipment confirmation actions in the same manner as for other shipments;

(11) Perform actions necessary to bill and confirm shipment;

(12) Transportation Shipment Planning Branch will forward a copy of the DD Form 1348-1 annotated with GBL number to Receipt Documentation Branch;

(13) Receipt Documentation Branch will forward copy of DD Form 1348-1 annotated with GBL number indicating material has been shipped to the appropriate DSCs, Directorate of Supply Operations, ATTN: Stock Control Branch.

(14) Delete the item from the classification suspense file and maintain the completed file.

e. When DD Form 1348-1 is received as a result of an exception outlined in subparagraph c above, and source exception data is still not available, take the following action:

(1) Query the DSC/ICP again by telephone and when furnished source exception data, proceed with actions outlined in paragraph 4d(2) through (6), above.

(2) When DSC/ICP cannot furnish MRO exception data, annotate the DD Form 1348-1 to read "NO EXCEPTION DATA FURNISHED" and release to storage for stock selection.

(3) Record action taken and transfer source data to the completed exception data file for 45 days and destroy.

f. Review source data suspense file daily, and take following action:

(1) Prepare MRO Register/History Inquiry as outlined in appendix E-115 P for MRO for which DD Form 1348-1s have not been received.

(2) Destroy the MRO Register/Inquiry local coding data sheet when applicable F-67 report is received.

(3) Review the Release Order Register/History Inquiry Answer (appendix F-67) and take action as follows:

(a) If the MRO has been documented, contact applicable Warehouse Area Control Branch or Shipment Planning Branch to effect proper action and/or annotation of exception data to the MRO. When this action has been completed, annotate suspense document accordingly and transfer to the completed exception data file for 45 days and destroy.

(b) If F-67 indicates the exception document has violated, check the F-85, Violation Report and/or F-118, Violation Followup Report, expedite corrective action, annotate and hold document in suspense, pending receipt of DD Form 1348-1.

(c) Destroy F-67 report.

g. When appendix F-12, Transactions Rejected to DSC, is received as a result of an action as outlined in subparagraph c above, record the computer action taken and transfer source data to the completed exception data file for 45 days and then destroy.

APPENDIX E-007 V

MATERIEL RELEASE ORDER VIOLATIONS

1. INPUT DOCUMENTS

   a. Appendix B-7, Materiel Release Order, DIC A5_, (except A5J) ZZ_, and ZZ9.

   b. Appendix B-175, IPE Materiel Release Order, DIC C5A/E, C51/5.

2. INPUT TO PROCEDURE DECISION CHARTS

   a. Appendix D-41.

   b. Appendix D-65.

   c. Appendix D-108.

3. PURPOSE CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for research, correction, reentry and/or deletion (as applicable) of Material Release Orders and IPE Materiel Release Orders rejected from computer processing. The Shipping Documentation Branch, Shipping Division is responsible for the correction of errors and reentry of the card as required. Reasons for computer rejections are as follows:

VIOLATION REASON CODE	DEFINITION
AB	Routing Identifier From invalid.
AF	Condition Code invalid or blank.
AI	Document number invalid.
AM	Unit price invalid.
AN	Unit of Issue invalid.
AS	Quantity invalid.
AU	Signal Code blank or invalid.
AW	Invalid Management Code.
AY	NSN invalid.
BJ	Supplementary address invalid.
RE	Unmatched in cumulative register.
3W	RDD invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AB indicates an MRO document has been received with an invalid "FROM" Routing Identifier in pos. 67-69. (This violation is not suspensed in the Cumulative Register.)

(2) PROCESSING/RESEARCH REQUIRED:

(a) Attempt to identify the applicable DSC/ICP that submitted the MRO, through interrogation of the Item Locator Record.

1. Prepare Item Locator Inquiry Card (appendix B-79 as outlined in appendix E-079 P, DIC ZBJ) with type of Action Code FE in pos. 79-80 (appendix A-42).

2. Forward Inquiry Card to Data Processing via keypunch services or by use of remote entry devices, for mechanical processing.

3. Receive Item Locator Data Inquiry Answer Listing (appendix F-37).

(b) Review listing (appendix F-37) to determine Commodity Manager Code and R/I and continue processing as outlined in paragraph 5 (see appendices A-44 and A-2).

(c) IPE MROs can only be received from DIPEC (S9R).

b. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AF denotes an MRO document has been received with an invalid Condition Code (other than A, B, C, D, E, F, G, H, J, K, or L) in pos. 71. IPE MROs (appendix B-175) contains Condition Code in pos. 24. Reference appendix A-16.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will attempt to obtain a valid document number by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

c. VIOLATION REASON CODE AI.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AI denotes an MRO document has been received with blank columns in document number field, pos. 30-43. (This violation is not suspensed in the cumulative register.)

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will attempt to obtain a valid document number by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

d. VIOLATION REASON CODE AM.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AM denotes an MRO document has been received with an invalid unit price in pos. 74-80 (field containing blanks, alpha, or all zeros, alpha F in pos. 80 acceptable in Commissary MRO).

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will obtain the correct unit price for the NSN involved by querying the submitting DSC/ICP by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

e. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AN denotes an MRO document has been received with an invalid unit of issue. A blank or other than alpha entry in pos. 23-24.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will attempt to obtain the proper unit of issue abbreviation through interrogation of item locator record or through local records. If correct information cannot be obtained locally, telephone the DSC/ICP for correct data.

(b) Continue processing as outlined in paragraph 5 below.

f. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AS denotes an MRO document has been received with a zero quantity or other than all numerics in the quantity field, pos. 25-29.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will obtain the proper quantity to be entered in the MRO by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

g. VIOLATION REASON CODE AU.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AU denotes an MRO document has been received with an invalid Signal Code in pos. 51 (code other than A, B, C, D, W, X, J, K, L, or M). Reference appendix A-8.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will obtain a valid Signal Code by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

h. VIOLATION REASON CODE AW.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AW denotes an MRO document has been received with an invalid Management Code, i.e., pos. 72 is other than A, F, G, H, or blank; or an IPE MRO has been received with an invalid Management Code, i.e., pos. 23 is other than 6 or 7. Reference appendix A-13.

(2) PROCESSING/RESEARCH REQUIRED:

(a) If Management Code is Z (and other than an IPE MRO) process as follows:

1. If pos. 3 is 5 or E, and exception data are not on file, delete the violation and process the MRO transaction in accordance with appendix E-007 P.

2. If pos. 3 is 5 or E and exception data are on file, place an 8 overpunch in pos. 3.

3. If pos. 3 is other than 5 or E, process as outlined in subparagraph (b) below.

(b) Processing personnel will obtain a valid Management Code by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

i. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AY denotes an MRO document has been received with an invalid stock number (pos. 8-20 contains blanks except for pos. 14 which may contain alpha).

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will attempt to obtain the complete stock number by querying the DSC/ICP reflected in pos. 67-69. For IPGs I and II use telephone. For IPG III use TWX. When the correct stock number cannot be furnished, take cancellation action by reinput of document using DIC ZZ9.

(b) When correct stock number is obtained, continue processing as outlined in paragraph 5 below.

j. VIOLATION REASON CODE BJ.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code BJ denotes and A5__ MRO document has been received with a J, K, L, M, or X in pos. 51 with blanks in the Supplementary Address Field, pos. 45-50, or with a Y in pos. 45 and pos. 3 is other than 5 or E.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will attempt to obtain a valid Supplementary Address by querying the DSC/ICP reflected in pos. 67-69 using telephone for IPGs I and II, or TWX for IPG III MROs. If DSC/ICP is unable to furnish correct Supplementary Address, obtain authority to cancel and delete the MRO and/or change the Signal Code (pos. 51) to A, C, D, or W.

(b) Continue processing as outlined in paragraph 5 below.

k. VIOLATION REASON CODE RE.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code RE indicates that an attempted deletion from the cumulative Register, DIC ZZ9, did not match a record in the cumulative Register.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will obtain the original MRO violation (appendix F-85), retained as backup for the administration decision to delete the MRO violation (see chapter 61, paragraph 361303c of this manual), and determine the reason for the no match condition.

(b) When the reason for the no match condition is ascertained, annotate the violation printout with the correct data element and continue to process as indicated in paragraph 5 below.

1. VIOLATION REASON CODE 3W.

(1) REASON FOR REJECTION:

This code indicates that the RDD in a Commissary MRO was not all numeric and not less than 366.

(2) PROCESSING/RESEARCH REQUIRED:

DS/T must review F-85 report and RDD currently being included in Commissary MRO cycle. Determine correct RDD and enter into Rejected MRO.

5. REENTRY INSTRUCTION

Annotate the corrections on the F-85 listing directly below the erroneous field corresponding to the appropriate card column using ink or a distinctive colored pencil. After all violations are corrected, forward the annotated violation printout, appendix F-85, to the Office of Data Systems, via keypunch service, for reentry into the applicable process.

NOTE: DIC A5_ Materiel Release Order with a Violation Code AB, AJ or AI are not suspended in the cumulative register. To delete an MRO which has been suspended in the cumulative register, the DIC will be changed to ZZ9. Document Identifiers ZZ_ will be utilized to reenter a MRO which has violated from processing.

APPENDIX E-008 P

REPLY TO CANCELLATION REQUEST (AC6, AC7, ACJ)

1. FORM/REPORT USED

a. Appendix F-50, Manual Cancellation/Followup List Report.

b. Manual MRO/DRO Control File.

2. REASON/CRITERIA FOR PREPARATION

An MRO/DRO Cancellation Request (DIC AC6/AC7/ACJ) has been received for an MRO/DRO with Code DP (Manual Processing) in the MRO/DRO History File. The transaction has been placed on appendix F-50 for manual processing. Based on the data in manual MRO/DRO Control File, a quantity or portion of the cancellation request quantity is to be reported to the DSC/ICP as:

a. Being canceled and a manually prepared cancellation accomplished transaction DIC AG6 or AGJ, Status Code BQ is required.

b. No record exists for the cancellation quantity or a portion of the cancellation quantity. A manually prepared "No Record" reply (DIC AE6 or AEJ with Code BF in pos. 65-66) is required.

c. The MRO was lost. DD/storage activity has a record of MRO but no supporting record of action taken. A manually prepared "Force Close" reply (DIC AG6 with Code BQ in pos. 65-66) is required.

d. The DD/storage activity is attempting diversion of the MRO shipment. A manually prepared "Attempting Diversion" reply (DIC AE6 or AEJ with Code B9 in pos. 65-66) is required.

e. The DD/storage activity has diverted the MRO shipment to the alternate consignee indicated in pos. 45-50. A manually prepared "Diverted" reply (DIC AG6 or AGJ with Code B6 in pos. 65-66) is required.

f. The DD/storage activity had previously reported a denial transaction to the DSC/ICP. A manually prepared "Previous Denial" reply (DIC AE6 or AEJ with Code BY in pos. 65-66) is required.

g. Shipped. A manually prepared Reply to Cancellation Request - Shipment Status (DIC AU_) is required, or for DROs, a Disposal Release Confirmation/ Status Card (DICs ARJ, ARK, ARL).

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Sources of Information.

(1) Appendix F-50.

(2) Manual MRO/DRO Control File.

b. Preparation of Form.

(1) Prepare a local coding data sheet utilizing the information outlined in subparagraph a above. Replies will be in one for the following formats:

(a) Cancellation Request Answer - Shipment Status (DIC AU_).

(b) MRO/DRO Cancellation Request Answer Card (DIC AG6/AGJ), appendix B-81.

(c) Disposal Release Confirmation/Status Card (DICs ARJ, ARK, ARL, AEJ), appendix B-225.

(d) Supply Status Card (DIC AE6), appendix B-94.

(2) Depot will furnish status of cancellation actions within five days of receipt of AC_ or AK documents. This status will be updated as further actions are taken on the cancellation request.

c. Signature/Approval Requirements.

Approval to be obtained from immediate supervision.

d. Distribution of Form/Report.

Forward local coding sheet to ODS via keypunch services/optical scanner services for input to AUTODIN.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE TO RETURNED FORM/REPORT

Key punch services/optical scanner services will return the local coding data sheet to the office of the initiator after action has been completed and the appropriate input card forwarded to AUTODIN.

6. DISPOSITION OF FORM REPORT AFTER FINAL ACTION

Update manual MRO/DRO control file with cancellation action taken and file local coding data sheet with applicable F-50 report.

APPENDIX E-009 P

LOCATOR AUDIT INQUIRY

1. INPUT DOCUMENT

Card input prepared IAW provision herein outlined and in coordination with ODS.

2. REASON/CRITERIA FOR PREPARATION

To accomplish an audit of the item locator record or for other related purposes as determined by appropriate personnel.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The requester of the appendices F-66 and F-77 will be required to submit request to the ODS. The Data Systems Manager will be responsible for the schedule of input and control of the report production.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF INPUT REQUEST

a. Instructions for preparation of the appendix F-66, Locations Selected for Audit Review Report.

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter UTL.
4-9	Enter UWMX06.
10	Leave blank.
11-15	Enter sample interval of locations to be extracted, i.e., 00010 will extract location data for every tenth location on the Item Locator Record (see note below).
16-80	Leave blank (not used).

NOTE: Type 1 or 2 (reserved locations) will not be selected.

b. Instructions for preparation of the appendix F-77, Reply to Auditor Location Inquiry Report.

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter UTL.
4-9	Enter UWMX07.

FIELD POSITION(S)	INSTRUCTIONS
10	Leave Blank.
11-15	Enter workload sample desired to pull daily workload.
16-80	Leave blank.

5. DISPOSITION OF CARD/FORM

Forward completed card (one card per run) to ODS for processing.

APPENDIX E-010 P

TRANSSHIPMENT MATERIEL

1. PURPOSE

This procedure prescribes the processes for receiving, controlling, and shipping materiel procured for direct vendor delivery to a requisitioner with diversion to a distribution depot for preservation, packaging, packing, and/or marking (herein referred to as packaging). The materiel is reentered into transportation channels at completion of directed processing.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-135.

b. Appendix C-13.

c. Appendix C-14.

d. Appendix C-36.

e. Appendix C-37.

f. Appendix C-38.

g. Appendix C-44.

h. Appendix E-011 P.

i. Appendix E-094 P.

j. Appendix E-150 P.

k. Appendix E-155 P.

l. Appendix E-156 P.

m. Appendix F-09.

n. Appendix F-204.

3. RESPONSIBLE ORGANIZATION ELEMENT

Receiving, warehousing, shipping, and/or transportation divisions may have functions to be accomplished, depending upon the required packaging.

4. PROCEDURES/INSTRUCTIONS

a. Receiving division will receive and file advance documentation provided by the procuring DSC for materiel to be packaged and shipped to a designated consignee.

NOTE: Copies may be provided to the packaging function if required for workload planning and control by internal procedures.

b. Receiving division will receive inbound materiel, perform in checking inspection and complete the carrier documentation. (Note: Type A inquiry will not be made.) Damage noted and attributed to the carrier will be noted on documentation and the signature of the delivering agent obtained. Required SF 363/SF 361 will be prepared and distributed.

c. Perform inspection of materiel if required by documents accompanying the materiel (DD Form 250, DD Form 1155, DLA Form 1224 or similar documents). If receiving documents are not available with the materiel, utilize advance documentation to create necessary documents. Copies of completed receipt documents will be provided the paying office. The Acceptance Action Report, F-204, Possible Transshipment - Manual Response Required, will be accomplished as necessary IAW appendix E-094 P. Mechanical receipt confirmation will not be made. Automated Acceptance Report (A/R) will not occur. A manually prepared A/R, DIC ZKP, must be prepared at the conclusion of the receipt inspection when the advance receipt documentation indicates the CAO is the payment office. Discrepancies noted during the inspection process as to materiel condition, identification, and similar defects will be documented on an SF 364 IAW appendix E-150 P and distribution made to the contracting and paying office(s). The materiel will be placarded and suspended pending the receipt of advice from the DSC. Disposition or resumption of processing will be accomplished as directed by DSC.

d. Quantities received at the depot which are within the authorized contractual variances will be packaged and shipped to the specified consignee. The actual quantity received and shipped will be annotated on the receiving and shipping documentation copies provided to the DSC.

e. Quantities received at the depot which are in excess of authorized contractual variances will be suspended and retained by the depot. The overage will be reported to the DSC on an SF 364 and disposition made as directed. The quantity requisitioned will be packaged and shipped to the consignee.

f. Quantities received at the depot which are less than the authorized contractual variances will be packaged and shipped as directed. The actual quantity received and shipped will be annotated on the receiving and shipping document copies provided to the DSC.

g. Perform packaging as specified on documentation or, in the absence of a specific guidance, utilize standard depot processing criteria as required for the type of material and consignee.

h. Manually type or mechanically generate shipping documentation (DD Form 1348-1, Shipment Planning Worksheet, DLA Form 674, shipping labels as required and GBL for freight shipments). (Note: DD Form 1348-1 may be utilized for parcel post and single line shipment in lieu of the SPW. Mechanically generated documents must be controlled by submission of a Document Identifier ZBM Action Code DP Card to preclude late shipping reports and generation of shipment confirmation records to the DSC.)

i. Configure and apply a transportation control number IAW MILSTAMP, DLAM 4500.17-M, Appendix B-8.

j. Prepare shipment status cards and furnish to the appropriate activity at the time of shipment.

k. Provide annotated and signed copies of receipt and shipping documents to the pertinent DSC.

5. DISPOSITION OF REPORT

Work units accomplished will be reported in the normal manner on Time and Attendance cards by using the appropriate element numbers as contained in the Management Information System Glossary, part 1 and part 2. Element numbers generated by the computer processing of other documents will be adjusted by submission of a Document Identifier ZUM to reflect the increased count from transshipment activity.

APPENDIX E-011 P

SINGLE LINE ITEM RELEASE/RECEIPT DOCUMENT (DD FORM 1348-1)

1. FORM USED

Single Line Item Release/Receipt Document (DD Form 1348-1) appendix C-11, output from appendix D-118.

2. CRITERIA FOR PROCESSING

DD Form 1348-1 is prepared for each MRO, DRO, or IPE MRO processed for shipment documentation. The form is used in conjunction with the Shipment Planning Worksheet (SPW), appendix E-016 P for picking, packing, and assembly operations. It is also used with the SPW to process the necessary documentation to progress the shipment through the various stages of completion in the Shipment Unit and History Files. Distribution of the DD Form 1348-1, which is covered below, provides copies with the materiel, advance copies for preparation of documentation.

NOTE: Entry of a code A, S, or X in pos. 62 with two numeric entries in pos. 63-64 indicates that the customer requires the materiel by a date computed as the last day of the month of the document date plus the number of months indicated in pos. 63-64. Shipping Activities will assure that this request is honored.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Various elements within the Directorate of Storage and Transportation (DS/T) and/or Directorate of IPE Operations are involved with the processing of the DD Form 1348-1 and will be identified as the responsible activity in the Procedures and Instruction section of this appendix as the function is outlined.

4. PROCEDURES AND INSTRUCTIONS

DD Form 1348-1 will be received by the Warehousing Division. Selected entries will be printed on the form when received. Manual entries as required will be entered on the form as outlined below:

a. Parcel Post (Single Line - No SPW).

The Area Control Branch will pick, pack, and ship quantity requested on the DD Form 1348-1.

(1) Pick stock based on Stock Number, pos. 8-20, Condition, pos. 71 and Location, (prime) block F, (alternate locations) block W.

(2) Enter signature of stock picker and date in block 1.

(3) Package/Pack IAW current directives (i.e., MIL-STD-726 Codes, Packaging clauses, MIL-STD-794 or special instructions) and mark IAW MIL-STD-129.

(4) Enter signature of packer and date in block 4.

(5) Type of container(s), block 2.

(6) Weight, block 3.

(7) Number of container, block 5.

(8) Total cube, block 6.

(9) Date shipped, block 12.

(10) Distribution of copies of DD Form 1348-1 (except FMS, see subparagraph g below).

NO. OF COPIES	USE
Original	Forward to Shipping Documentation.
Two Copies	Consignee with materiel (see note 1).
One Copy	Consignee - attached to outside of No. 1 shipping container after use for picking, packing, and item identification.
One Copy	Consignee - with advance copy of the Bill of Lading for CONUS shipments only. For Grant Aid shipments, this copy will be forwarded by air mail to the activity designated in MILSTRIP Supplement No. 2 (MAPAD) to receive the Release/ Receipt Documents (see note 2).
One Copy	Forward to Shipping Documentation. (For DROs, this copy should accompany materiel to the receiving property disposal activity.)

NOTE 1: One single line item shipments, these copies will be included with the materiel placed in the No. 1 shipping container. On consolidated shipments, these copies will be attached to the shipment pack applying to each individual requisition and placed inside the shipping container(s). In the event the storage container or manufacturers sealed pack is used as the shipping container the container will not be opened solely for the purpose of placing documents on the stock inside. Instead, the documents will be attached to the exterior of the number one shipping container.

NOTE 2: When shipment is accomplished by a method not requiring backup documentation to a movement document (i.e., parcel post, LOGAIR, Government truck), these copies will be destroyed by the distribution depots and will not accompany the materiel or be forwarded by other means, except when shipped to PDO.

(11) Shipping Documentation Branch will keypunch and process to the computer the necessary ZBM Cards to closeout the shipment using data on original copy of DD Form 1348-1. Additional copy will be utilized as required or destroyed.

b. Parcel Post Multiline (More Than Four Lines).

The Area Control Branch will receive DD Form 1348-1(s) and matching SPW for picking, packing, assembly, and shipping of quantity requested:

(1) Pick stock based on Stock Number (pos. 8-20), Condition (pos. 71), and Location (prime), block F, (alternate locations) block W.

(2) Enter signature of stock picker and date in block 1.

(3) Assemble Shipment Unit Line Items, pack, mark, and/or label. Signature of packer, date packed in block 4 of DD Form 1348-1.

(4) Recap SPW with container(s), weight cube and date shipped (see appendix E-016).

(5) Distribution of DD Form 1348-1:

See subparagraph a(10) above, for distirubtion of DD Form 1348-1 and appendix E-016 P for distribution of SPW.

(6) Shipping Documentation Branch will keypunch and process to the computer the necessary ZBM or ZBP cards to close out the shipment using data on the SPW. Copies of DD Form 1348-1 will be used as required or destroyed.

(7) Shipping Documentation Branch will keypunch and process to the computer a DIC ZEN input with the manually determined TCN, noted by the packer on the DD Form 1348-1, when a shipment is dispatched with other than the computer assigned TCN.

c. Freight (Other Than IPE).

The Area Control Branch will receive DD Form 1348-1(s) and matching SPW for picking, packing, and assembly of quantity requested, annotate DD Form 1348-1(s) with assembly area in block V.

(1) Pick stock based on Stock Number (pos. 8-20), Condition (pos. 71), and Location (prime), block F, (alternate location) block W.

(2) Enter signature of stock picker and date in block 1.

(3) Forward line item(s) to assembly area in block V.

(4) Assemble Shipment Unit.

(5) Forward Shipment Unit to designated packing area.

NOTE: Code A, S, or X in pos. 62 will be entered by the requisitioner who desires an extended RDD. These entries indicate that the customer requires the materiel by a date computed as the last day of the month of the document date (pos. 36-39) plus the number of months indicated in pos. 63-64 (e.g., 03 = 3 months). When these RDDs appear in IPG I and IPG II MROs, these MROs will be

sorted separately and not placed in the same shipment unit with other IPG I and IPG II MROs. This will enable personnel to identify these extended RDD MROs and avoid taking expedited measures to process them.

(6) Pack and mark. Signature of packer and date in block 4 of DD Form 1348-1.

(7) Weight, block 3.

(8) Total cube, block 6.

(9) Forward Shipment Unit to designated outloading point.

(10) Enter:

(a) Date offered in block GG.

(b) Block 5 of DD Forms 1348-1 will reflect the shipping container number and the total number of containers in a shipment under the rules contained in MILSTD 129D, paragraph 5.3.4. The shipping container number(s) will indicate the specific container(s) in which the item reflected on a DD Form 1348-1 is packed.

(11) Distribution of DD Form 1348-1:

See subparagraph a (10) above, for distribution of DD Form 1348-1.

(12) Shipping Documentation Branch will keypunch and process to the computer the necessary ZBM and/or ZBP cards to offer shipment to transportation using data on SPW. Original copy of DD Form 1348-1 will be used as required or destroyed.

(13) Commercial Traffic Branch will utilize additional copy in conjunction with distribution of GBL.

d. Denials Undershipments and Overshipments (Other Than IPE).

When quantity requested on the DD Form 1348-1 is not available after research has been accomplished to locate item, annotate DD Form 1348-1 as follows:

(1) Circle quantity requested, pos. 25-29. Enter in block U the quantity actually shipped and quantity denied, or undershipped and applicable action code as listed below, e.g.:

Positions 25-29	Qty 200
Block U	Shipped - 162
Block U	Denied - 38
Block U	Action Code - DT

Example overshipment:

Positions 25-29	Qty 20
Block U	Shipped 24
Block U	Overshipped 4
Block U	Action Code - DB

(2) Applicable Action Codes and explanation listed below (appendix A-42):

ACTION CODE	ACTIONS	DEFINITION/EXPLANATION
DB	Overshipment of Quantity Due to Item Packaging Shipped Character	Differences between quantity in MRO Control Card and quantity ordered is shipped due to item packaging characteristics.
DD	Undershipped Quality Difference	Difference between quantity in MRO Control Card and quantity shipped is quantity undershipped. (Item package characteristics.)
DE	Undershipment of Quantity Due to Type Pack	Difference between quantity in MRO Control Card and quantity shipped is quantity undershipped due to type pack. Materiel not available in the type pack specified on the release order (subsistence only).
DG	Undershipment of Quantity Due to Reidentification	Difference between quantity in MRO Control Card and quantity shipped is quantity undershipped due to reidentification of assets in process. Materiel in physical location found to be misidentified. Reidentification of assets in process and storage location will advise results by DD Form 1225. Assets not available in the physical location to supply requests stock number.
DJ	Shelf-Life Denial	Difference between quantity in MRO Control Card and quantity ordered shipped is quantity denied due to lack of proper shelf-life. Materiel not available having the required shelf-life as specified on the release document. Materiel adjustment transaction is not pertinent.

ACTION CODE	ACTIONS	DEFINITION/EXPLANATION
DK	Condition Change Denial	Difference between quantity in MRO Control Card and quantity denied due to condition change. Materiel in physical location found to be in other than recorded condition. Materiel adjustment transaction will be provided to the managing DSC. This code is used to indicate the physical materiel has, for example, deteriorated, been damaged, or found to be incomplete and requires the assigning of a new condition code.
DL	Exact Quantity Denial	Narcotic materiel not available to supply exact quantity MRO in support of FMS.
DM	Continuous Length Denial	Difference between quantity in MRO Control Card and quantity denied due to nonavailability of one continuous length of item.
DT	Warehouse Denial	Difference between quantity in MRO Control Card and ordered shipped in warehouse refusal. Due to stock exhausted for stock number and condition code requested. Unsuccessful search of stored materiel has been made. Materiel may be on hand and recorded for a condition code other than the requested code.

NOTE: When pos. 70 of the MRO contains numeric data and Block GG of the DD Form 1348-1 contains message "Ship Exact Quantity," Action Codes DB and DD are not applicable.

(3) Annotated DD Forms 1348-1 will be routed to the Shipping Documentation Branch, DS/T, for preparation of computer input to cause closing of the MRO History File and preparation of output Materiel Release Denial, DIC A6_, appendix B-8.

e. Freight (IPE).

The Storage Division, Directorate of Industrial Plant Equipment (IPE), will receive DD Form 1348-1, with address coded if not computer printed, from Storage and Transportation Production Control Office. DD Form 1348-1 for FMS will be provided in duplicate. Matching SPW, DLA Form 674, will be provided concurrently with DD Form 1348-1.

(1) Production Control Branch, Area Control Branches, Warehousing Division, DS/T will:

(a) Detach one copy, DD Form 1348-1, and place in Shipment Suspense File; destroy upon completion of shipment.

(b) Forward original and one copy of DD Form 1348-1, with the Shipment Planning Worksheet (SPW), DLA Form 674, to the Storage Division, Directorate of Industrial Plant Equipment.

(2) Storage Division will:

(a) Detach two copies and place in plastic envelope with SPW. For Foreign Military Sales (FMS) shipments, detach two copies and place in plastic envelope with SPW.

(b) Detain remaining copy of DD Form 1348-1 in office Suspense Files; forward as supporting document when shipment is released to Transportation.

(c) Pick stock based on Stock Number (pos. 8-20), Condition (pos. 24), Item Identification Number (pos. 70-80) and Warehouse Location appearing in block F.

(d) Enter signature of stock picker and date in block 1 and forward to Repair/Overhaul Division, Directorate of IPE Operations for performance of maintenance/rehabilitation actions directed by Maintenance Code (pos. 25-26). For definition of Maintenance Codes, see appendix A-68.

(e) Forward equipment and DD Form 1348-1 to assembly area for DIPEC shipments.

(f) Assemble Shipment Unit, (IPE) Shipments Units are single line, unless manually consolidated.

(g) Forward Shipment Unit to designated packing area.

(h) Pack and mark Shipment Unit.

(i) Forward Shipment Unit to designated outloading point. Annotate DD Form 1348-1 with TCN, GBL, or CBL Number.

(j) Distribute DD Form 1348-1 as follows:

FMS	ALL OTHER	LOCATION
One Copy	Three Copies	Inside container for identification.
One Copy	One Copy	Outside packing list.

FMS	ALL OTHER	LOCATION
Three Copies (with duplicate)	One Copy	Area Control Branch, Warehouse Division DS/T when shipment is offered to transportation.

(3) Area Control Branch Warehousing Division, DS/T, will forward returned copies of DD Form 1348-1 to Shipment Planning Branch, Shipping Division, DS/T, as supporting documents for offering shipment to Transportation for release.

(4) The Shipping Documentation Branch, Shipping Division, DS/T, will keypunch the ZBM or ZBP card to accomplish freight offer action and forward to computer processes.

(5) Commercial Traffic Branch, Transportation and Traffic Management Office, DS/T, will utilize copy(s) of DD Form 1348-1 in conjunction with distribution of the GBL or Notice of Availability (NOA), as applicable.

f. Denials (IPE).

Denials indicating that shipment as directed by the MRO was not accomplished will be processed, e.g., DD Form 1348-1 annotated, as shown in subparagraph d above.

g. Distribution of DD Form 1348-1 for Foreign Military Sales (FMS).

FMS Transactions. Two sets (six copies each) of the Release/Receipt Documents will be prepared for all FMS Transactions, and will be distributed as follows:

(1) The first set (six copies) will be distributed as follows:

NUMBER OF COPIES	USE
Original	Supply - Retained by the distribution point (shipper).
Two Copies	*Consignee - Inside No. 1 shipping container.
One Copy	Consignee - Inside packing list envelope and attached to the outside of the No. 1 container.
One Copy	Forward to activity designated in the MILSTRIP Supplement No. 2 (MAPAD), as recipient of the Release/Receipt Documents.
One Copy	Transportation - Retained by distribution point (shipper).

*When containers are prepacked and selected for shipment IAW the container markings, three copies will be inserted in the envelope on the outside of the container. On consolidate shipments these copies will be attached to the shipment pack applying to each individual requisition and placed inside the shipping container.

(2) The second set (six copies) will be distributed as follows:

(a) NOA Required. Three copies of the second set will be used in providing the original/Delay/Amended NOAs as required. The copies remaining in the second set upon shipment release will be distributed IAW subparagraph (b) below.

(b) NOA not Required. The second set (six copies) together with one copy from the original set will be forwarded, via airmail, if not to a CONUS recipient of close proximity, to the "ship to" address as designated by the entries in pos. 33 and 47.

h. Disposal Turn In Document (DTID) Entries for Hazardous Material/Hazardous Waste.

(1) Some property, because of its peculiar nature, its potential influence on public health, safety, security or its potential influence on private industry, must be disposed of in other than a normal fashion. These items must be identified in block D of the DD Form 1348-1 at the time of preparation by the storage activity. To accommodate the Resource Conservation and Recovery Act (RCRA), hazardous material/waste transfers to disposal will be prepared in accordance with the instructions contained in this manual. In the event that two or more categories are applicable to the same turn-in document, the category most applicable to or which identifies an asset requiring the most stringent controls will take precedence.

(2) HM will be mechanically printed in block C of the DTID if turn-in is hazardous material/hazardous waste. If turn-in is determined to be hazardous waste, cross out HM and enter HW.

(3) Enter the category identifying the property as requiring special handling by disposal, block D. These groupings are not readily categorized by individual nomenclature and must be entered "in-the-clear" in this block. The listing below is an example of the various categories. See DoD 4160.21-M for a complete listing.

Contractor Inventory
Foreign Equity Property
Industrial Fund Property
Radioactive Materiel
Red Cross Property
Redistributable MAP Property
Shelf-Life Property
Exchange/Sale Property
Nonappropriated Fund Property

(4) Enter the quantity actually transferred to DPDO, in block Q, if different than pos. 25-29.

(5) Freight classification nomenclature. Enter six characters (two alpha, four numeric) identification number as shown in 49 CFR, part 172, in block U.

(6) Enter transporter's name and Environmental Protection Agency (EPA) identification number in block AA and BB.

(7) Signature of Transporter and Date received in block position.

i. DTID Entries for Other Than Hazardous Material/Hazardous Waste.

(1) Enter the category identifying the property as requiring special handling by Disposal, in block D. These groupings are not readily categorized by individual nomenclature and must be entered "in-the-clear" in this block. The listing below is an example of the various categories. See DoD 4160.21-M for a complete listing.

Contractor Inventory
Foreign Equity Property
Industrial Fund Property
Radioactive Materiel
Red Cross Property
Redistributable MAP Property
Shelf-Life Property
Exchange/Sale Property
Nonappropriated Fund Property

(2) Enter the quantity actually transferred to DPDO, in block Q, if different than pos. 25-29.

APPENDIX E-012 P

TELEPROCESSING TERMINAL SECURITY SYSTEM OPERATIONS

1. PURPOSE

To provide instructions and information pertaining to the operation of teleprocessing security at the depot. This procedure includes only the Harris teleprocessing terminals.

2. APPENDICES USED IN THIS PROCESS

a. Appendix F-48.

b. Appendix F-49.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Office of Data Systems.

b. Office of Planning and Management.

c. All organizational elements using Harris teleprocessing terminals.

4. PROCEDURES/INSTRUCTIONS

a. Office of Data Systems will:

(1) Establish operating times for the Harris teleprocessing terminals in conjunction with the Office of Planning and Management and Terminal Area Security Representatives.

(2) Report violation of TP security to the ADP Facility Security Representative. When three attempts to sign-on have failed a message will appear on the computer console. The console operator will inform the Teleprocessing Terminal Security Officer when this happens.

b. Office of Planning and Management will:

(1) Establish operating times for the Harris teleprocessing terminals in conjunction with the Office of Data Systems and Terminal Area Security Representatives.

(2) Review the logs of terminal usage to determine trends and make changes or take corrective action, as necessary.

c. ADP Facility Security Representative (ADPFSR).

(1) Function as the central control point for the TP security process.

(2) Receive requests for adds, deletes and/or changes to the operator control table from the Terminal Area Security Representative.

(3) Obtain new passwords as required. Password assignment will be computer controlled and passwords may only be obtained by the ADPFSR. Update the operator control table with operator name, password, authorized TP terminals and authorized programs. The operator control table will be accessible only to the ADPFSR. Logic for password assignment will be as follows:

(a) The password will be unique, 6-8 digits, no duplicates and when retired will not be used again.

(b) Only one password will be assigned to an operator and no more than one operator will have the same password.

(4) Inform the operator of the assigned password. The password will be completely confidential between the Teleprocessing Security Officer and the operator. On a periodic basis, assign a new password to each operator.

(5) Respond to calls from operator supervisors in the event an unauthorized attempt has been made to use a terminal or program.

(6) Respond to calls from the computer console operator when three unsuccessful attempts have been made by an operator to sign-on to a terminal resulting in the terminal being locked out.

(7) Follow necessary Data Systems procedures to put back into operation terminals which have been locked out due to a security violation.

(8) Respond to temporary assignment of operators to terminals or programs which are needed on a day-to-day basis. At completion of the temporary assignment the ADPFSR will ensure the temporary assignment is removed from the operator table.

(9) Review the listing of terminal violations to determine trends, take corrective action or additional training, as necessary.

(10) Investigate reports of TP security violations and reports of system abuse and/or attempts to bypass TP security procedures.

d. Terminal Area Security Representative (operator supervisor) will:

(1) Assign CRT operators to a specific TP terminal(s).

(2) Assign the operator the authority to specified computer programs.

(3) Inform the depot ADPFSR of the operator names (not to exceed 40 characters including blanks) and the terminals and programs the operator will be authorized to use.

(4) Make necessary additions, deletions or changes to operators, terminals and programs and inform the ADPFSR operator of these changes. Multiple operators may be assigned to terminals and/or programs.

(5) Ensure the operator has been assigned a terminal password and account code by the ADPFSR.

(6) Respond to operator when operator is unable to sign-on by informing ADPFSR of the problem and by assisting the operator to properly sign-on.

(7) Respond to calls from the ADPFSR when sign-on security requirements have not been met following three attempts to sign-on by an operator.

(8) Establish operating times for assigned CRT terminals in conjunction with OPM and ODS.

(9) Ensure each assigned operator is fully trained in the TP security process.

(10) Report to the ADPFSR unauthorized attempts to use terminals/probrams.

e. Operator will:

(1) Receive a password initially and periodically thereafter from the ADPFSR which will be used to sign-on and operate preassigned CRT terminals and operating programs.

(2) Operate only at assigned terminals and be responsible for terminal security while signed-on.

(3) Access only authorized programs.

(4) When the terminal is up and ready for business:

(a) Only three tries will be allowed to sign-on to the terminal. In the event the third try fails, the terminal will be closed to all operations. Contact supervisor to have the terminal brought back into operation and to determine and correct the problem with the sign-on procedure.

(b) Sign-off by pressing the designated key upon completion of work on the terminal.

(c) Each terminal is assigned a period of time following an entry which, if no other transaction is entered, the terminal will automatically sign-off. When the terminal automatically signs-off (other than at close of scheduled operating process) it may be brought up again by following the normal sign-on procedure described above.

APPENDIX E-013 P

BATCHING INVENTORY COUNT CARDS

1. PURPOSE

To establish policy and methods for batching of Inventory Count Cards, increasing overall effectiveness of Inventory Count actions, and minimizing adverse reactions to shipping efficiency due to suspension of related Materiel Receipt Orders (MROs).

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-84.

b. Appendix B-66, Part J.

c. Appendix F-11.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Physical Count Branch of the Inventory Office apportions to provide workload by appraising the batch output data displayed on the F-11, Summary Analysis Report.

b. Scheduling and Control Branch of the Inventory Office will utilize report data in resolving unusual workload problems encountered in the batching process and to monitor the report data for daily workload report development.

4. PROCEDURES/INSTRUCTIONS

a. A local matrix/table (appendix B-66J) will be developed, utilizing guidelines referenced in paragraphs 2a and b, considering the following suggested criteria:

(1) Like storage areas/warehouses shall be related; e.g., physical proximity, security/controlled, and hazardous contents.

(2) Type and/or condition of storage locations.

(3) Any supporting factors relating to type of location which would contribute to expediting physical count actions.

(4) Known inventory problem areas.

(5) Mechanized areas requiring different sort of count cards.

b. Proper batching of count cards will accomplish the following prime inventory objectives.

(1) A high productivity of accurate counting.

(2) Priority is to be given to clear counts, as rapidly as possible.

(3) Release of suspended MROs, reducing late shipments due to inventory action.

c. Count cards are produced under the following batching criteria.

(1) Batch 1 - No location count cards.

(2) Batch 2 - Count cards for locations other than Condition Codes A, B, C and F.

(3) Batch 3 - All count cards for NSNs outside the mechanized area (identified by matrix X), which have MROs suspended because of inventory. In addition, these count cards for NSNs with locations outside the mechanized area, which have a matching NSN count card in the mechanized area.

(4) Batch 4 - All mechanized area locations including counts with suspended MROs and matching NSN counts in batch 3.

(5) Batch 5 - All other count cards for bulk locations not included in batch 3.

(6) Batch 6 - All second and third counts.

d. Count cards produced under batches 3 and 5 criteria will be sequenced by area or station code within the matrix/table groups. The batch 4 count cards for the mechanized area will be issued in straight location sequence. Batch 2 is sequenced in NSN sequence. Batch 6 is sequenced by serial number within NSN.

e. Scheduling and Control Branch.

(1) Forward all Condition E, G, J, or L count cards to Physical Count Branch for counting and special control. Care should be taken to closely coordinate this effort with Quality Control so that their records of the quantity of suspended materiel can be corrected, if there is a discrepancy.

(2) Ensures that count card batches and report data are available to the Physical Count Branch as soon as possible preceding the count to allow ample time to organize count crews.

f. Physical Count Branch.

(1) Will take no action on "no location" count cards. These cards will be automatically input by the computer as zero counts. Discrepancy reports will be automatically produced if deleted locations exist. Inventory monitor will screen suspense records prior to release of count to DSC.

f. The Inventory Office will retain copies of the initial and subsequent report as an aid in accomplishing research where necessary.

Updates will be entered with appendix E-190 P.

APPENDIX E-014 P

DATA UPDATE TO THE IDC FILE FOR OPEN RECEIPTS FOR NSN(S) UNDER INVENTORY

1. PURPOSE

a. To prescribe the actions to be taken upon receipt of the F-108 report, parts 1 and 2, for Open Receipts for NSNs Under Inventory.

b. To prescribe the actions to be taken on preinventory receipts through the processing stages to stowage.

c. To prescribe the action to be taken when a receipt for an NSN under inventory will be held in Receiving Division until completion of inventory or when the identity of a placarded receipt cannot be retained.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-93.

b. Appendix E-190 P.

c. Appendix F-108, Parts 1 and 2.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Receiving and Warehousing Divisions and Inventory Office, Directorate of Storage and Transportation (DS/T).

4. PROCEDURES/INSTRUCTIONS

a. Part 1 of the F-108 listing of Open Preflag/Preinventory Receipts for NSNs Under Inventory will be provided daily to the Warehousing Division and their assigned Area Control Branches in order to locate, identify, and accelerate stowage action for each open receipt indicated on the listing.

b. Warehousing Division will receive placarded receipts and expedite processing of locator update action. The identity of the receipt placarded will be retained whenever practical.

(1) If the identity of the placarded receipt cannot be retained, as soon as possible (i.e., if it is stowed in more than one location or an MRO action is processed against the placarded location prior to evidence that a physical count has been accomplished), enter Status Code 4 to the IDC File IAW subparagraph 2a above.

(2) When an MRO action is processed against a placarded item under inventory, the placard(s) will be pulled and delivered by the responsible warehouseman, together with the ZUE documents, to the appropriate Area Control Office.

c. Receiving Division will accomplish the following for receipts processed through central receiving when the response to an A type inquiry document (529) indicates the NSN has been flagged for inventory.

(1) Accelerate the receipt confirmation action for each receipt document which has been identified as being under inventory.

(2) Ensure the receipt is placarded with Do Not Inventory, prior to routing to Warehousing Division.

d. Part 2 of the F-108 listing will be provided daily to the Receiving Division which will take the following action for preflag-day receipts for NSNs Under Inventory:

(1) Question the validity of open receipt line. Those determined invalid will be deleted by following the procedure in appendix E-182 P.

(2) When receipts identified on part 2 for F-108 will be held by receiving and not released for stowing until after the inventory action is complete, input will be submitted using Status Code 1. Annotate the receipt Control Document, appendix F-200, that Status Code 1 has been entered as update to the IDC File. When receipt is ready to be processed, make a type B inquiry (appendix E-163 P). If still under inventory, placard stock and release as normal receipt.

NOTE: A preflag day receipt which is open on the IDC File (no MRC received) on cutoff day plus one (count day) will automatically cancel the inventory for that NSN.

e. The Warehousing and Receiving Divisions will accomplish the following for bulk type receipts which initially bypass central receiving:

(1) Warehousing Division will, after identification of contents of the transportation unit, initiate a type B inquiry. If the response to the B inquiry reveals that the NSN is not under inventory, process under current procedures. If the response reveals that the NSN is flagged for inventory, expedite the unload, annotate receiving documentation, complete the B type inquiry and annotate "Placarded" on the upper margin of the printout, and placard the stock. Handcarry the inquiry response and the receipt documentation to Receiving Division. It is mandatory that the A type inquiry be made the same day as the B type inquiry.

(2) Receiving Division will initiate a type A inquiry. Provide a Storage Action Document, appendix F-202, (white and pink) copies to Warehousing Division for use in processing the ZZS update action. Retain one copy of both the type A and type B inquiries. Complete receipt processing action IAW paragraph 4c above.

(3) Warehousing Division will process the supplies to stowage and accomplish locator update action utilizing the A inquiry answer provided by Receiving Division.

f. The Inventory Office will retain copies of the initial and subsequent report as an aid in accomplishing research where necessary.

g. When IDC File updates are to be entered through the 2265 teleprocessing unit, the following data will be underlined on F-32 and F-108 and Status Code written in the last column titled SC.

NSN
TP Number
Status Code
Quantity

Updates will be entered with appendix E-190 P.

APPENDIX E-015 P

ARMY MEDICAL TRANSSHIPMENTS

1. PURPOSE

This procedure describes the methods for processing Army Medical Transshipments (MEDALOC) through the Container Consolidation Points (CCP).

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-120

b. Appendix B-121

c. Appendix B-122

d. Appendix B-124

e. Appendix B-126

f. Appendix B-152

g. Appendix B-153

h. Appendix C-4

i. Appendix C-11

j. Appendix D-185

k. Appendix F-70

l. Appendix F-75

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Directorate of Supply and Transportation (DS/T)

4. PROCEDURES/INSTRUCTIONS

a. General

This procedure provides instruction for recording Army Medical Transshipments (MEDALOC) through the Container Consolidation Points (CCP).

b. CRT Initialization.

(1) To initiate the program, key in $$UWSV30 and press the ENTER key.

(2) This input will result in a display of the MEDALOC processing identifiers. See figure 1 below, for example.

c. Select the particular process code, key it in and press enter. Input of this transaction will result in one of the following displays:

RP - Receipt Processing. See figure 2 below for example.
SP - Consolidated Pack/Shipment Processing. See figure 3 below for example.
CP - CDP Record. See figure 4 below for example.
CF - CDF Record. See figure 5 below for example.

d. File Maintenance Preparation.

(1) RP - Receipt Processing:

(a) This transaction is used to record the receipt of material at the Container Consolidation Points (CCP). Enter RP for the Process Code and the panel for receipt processing will be displayed.

(b) If from off depot, enter the transportation control number, pieces and *date received. If shipment originated on depot, enter MOFAST Shipment Unit number, check digit, pieces and *date received.

*Date received is optional, if no date is entered current date will be automatically entered.

(c) Input matches suspended CDP and CDF data and the following is accomplished:

1. A D6S is produced for each MRO for that shipment unit in accordance with appendix B-120.

2. If shipment was from another depot a route slip is output with message MEDALOC and a Shipment Unit number assigned in accordance with appendix F-75.

(2) SP - Consolidated Pack/Shipment Processing.

(a) This transaction is used to record shipping information of material at the Container Consolidation Points (CCP). Enter SP for the Process Code and the panel for Consolidated Pack/Shipment processing will appear.

(b) Enter CN Action Code for consolidated pack TCN or PT for completion shipment.

1. CN entry consists of NON MILS TCN, Weight, Cube, POE, POD, Date units placed in the consolidation. Put Y in entry complete after all Shipment Units have been entered to complete consolidation. Output will be a new route slip and a new military shipment label (DD Form 1387).

2. PT entry consists of NON MILS TCN, Weight, Cube, POE, POD, Date Shipped, Mode, Pallet ID and Shipment Units placed on the pallet. Put Y in entry complete after all Shipment Units have been entered to complete pallet.

NOTE: Reprocessing/Regeneration of output for SP process.

a. To process entries on either CN or PT in case of erroneous input such as incorrect SU numbers or too many SUs do the following: Reprocess the input if there is more than one panel of Shipment Units, enter X in entry complete on the first panel which will unchain the consolidation or pallet but will not complete it until a Y is input. For less than a full panel of Shipment Units enter Z in entry complete, this will unchain, rechain and complete.

b. To regenerate output do the following: Enter TCN and R in entry complete.

(c) Upon entry of pallet Shipment Processing information the following is accomplished:

1. Generate two Air Intransit Data Cards (TK6) for each consignee on the pallet in accordance with appendix B-122.

2. Generate a MEDALOC Manifest TCMD (DD Form 1384-2) for each pallet in accordance with appendix C-4.

3. Generate MEDALOC Air Manifest Cards (TXA) for the pallet in accordance with appendix B-124.

4. Generates a Military Shipment Label for the pallet.

5. Generate Consolidated Shipment Status Cards (BBC) for each MRO, one for the Army Logistics Control Agency (LCA) and one for Defense Personnel Support Center (DPSC).

6. Close out existing MOFAST records reflecting 9 as the mode of shipment and date received as CCP received date.

(3) CP - Transportation Movement Data Card.

(a) This transaction establishes action to be taken in the absence of CDP information.

(b) Appendix B-153 specifies data which must be entered in the various fields. This same criteria applies for the CRT input.

(c) Enter Action Code AD (Add), CH (Change), DE (Delete) or IN (Inquire) and take appropriate action.

(4) CF - Receipt Detail Data Card.

(a) This transaction establishes action to be taken in the absence of CDF information.

(b) Appendix B-152 specifies data which must be entered in the various fields. This same criteria applies for the CRT input.

(c) Enter CF for the Process Code and the panel for CDF records will appear.

(d) Enter Action Code AD (Add), CH (Change), DE (Delete) or IN (Inquire) and take appropriate action.

NOTE: When using Action Code AD (Add) you may enter Y in the Entry Complete field after all MROs are entered. This will cause the shipment to be receipted and will output the D6S transactions and the MEDALOC transshipment route slip eliminating the need of an entry through the RP process.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
PROCESS CODE INVALID	Probable Cause: Keyed in wrong.
	Action: Verify and reenter.
NO SU FOUND	Probable Cause: Keyed in wrong.
	Action: Verify and reenter.
NO CDP RCD	Probable Cause: CDP record not available.
	Action: Enter CDP information.
NO XREF FOUND	Probable Cause: Key in error.
	Action: Verify date and reinput.
DUPE XREF	Probable Cause: Program problem.
	Action: Notify supervisor to advise DSAC-D.
CONSOLIDATION NOT FOUND	Probable Cause: Attempting to chain consolidation to pallet and record not found.
	Action: Verify and reenter.
CDF RCD NOT FOUND	Probable Cause: Keyed in wrong.
	Action: Verify and reenter.

ERROR MESSAGE	CAUSE/ACTION
ACTION CODE INVALID	Probable Cause: Keyed in wrong. Action: Verify and reenter.
CONTROL RCD NOT FOUND	Probable Cause: Program Problem. Action: Notify supervisor to advise DSAC-D.
LST ASGND TCN INV RCD TYP	Probable Cause: Attempting to chain SU to a pallet which is already chained in a consolidated pack. Action: Verify and reenter.
INCMPLT ENT	Probable Cause: Data missing. Action: Verify and complete entry.
INVALID ENT	Probable Cause: Keyed in wrong. Action: Verify and reenter if possible.
CONSEE INV	Probable Cause: Consignee record blank. Action: Go to CP process and enter consignee.
CD/SU INV	Probable Cause: Keyed in wrong. Action: Verify and reenter.
PALLET NOT PROCESSED	Probable Cause: If no entries take, on SP input message appears. If any entries take, message does not appear. Action: Correct remaining entries accordingly and reenter.
CONSOL NOT PROCESSED	Probable Cause: If no entries take, on SP input message appears. If any entries take, message does not appear. Action: Correct remaining entries and reenter.

ERROR MESSAGE	CAUSE/ACTION
DTE RCV INV	Probable Cause: Data entered is greater than current date or less than date offered in SU record. Action: Verify date and reenter.
PIECE-CNT INVALID	Probable Cause: Piece count does not match CDP record. Action: Verify and reenter or change piece count on CDP record and reenter.
RCPT DATA PREV UPDATED	Probable Cause: Duplicate entry. Records not effected but all output products except those that are transceived are regenerated. Action:
CONSIGNEE CNT OVER 32	Probable Cause: Maximum consignees per pallet exceeded. Action: No more than 32 consignees can be allowed on a breakbulk pallet. Some must be removed and repalletized.
DUPLICATE ENTRY	Probable Cause: Entry previously made. Action:
CDF ARE REQUIRED	Probable Cause: Record does not exist. Action: Enter CDF records.
SU NOT MEDALOC	Probable Cause: Eligibility flag in SU record must be M or Y with POE Code of other than 103 or 303. Action: Reroute through MOFAST or change to MEDALOC eligible through program $$UWFH25 and or change POE code using $$UWFQ45. You must also force a new MOFAST route slip using $$UWFQ35.
CDP IS MOFAST	Probable Cause: Attempting to add a CDF Record for an MRO originating at your depot. Action:
RCD CODE IS INVALID	Probable Cause: You have CDP record in lieu of CDF record because you left sequence number 0. Action: Key in sequence number.

ERROR MESSAGE	CAUSE/ACTION
NOT ELIG/CN	Probable Cause: Already recorded as shipped. Action: Verify and reenter.
NOT ELIG/PT	Probable Cause: Attempting to chain SU to a pallet when the SU is already chained in a consolidated pack. Action: Verify and reenter.
PALLET/CONS NOT COMPLETE	Probable Cause: Input of an R Completion Code for reprint of output prior to completing the pallet. Action: Complete pallet by input of Completion Code Y.

APPENDIX E-016 P

SHIPMENT PLANNING WORKSHEET (SPW)

1. FORM USED

Shipment Planning Worksheet (DLA Form 674) appendix C-19. Output from appendix D-98 in accordance with selected depot option defined in appendix A-66.

2. REASON/CRITERIA FOR PREPARATION

DLA Form 674 is used to accomplish the following:

a. Advance planning and scheduling of shipment.

b. Consolidating compatible MROs into shipment units.

c. Freight planning.

d. Predetermining and acquiring transportation releases and routings.

e. Controlling materiel through the entire pick, pack, mark, assemble and ship process.

f. Supporting bills of lading.

g. Reporting management and statistical information.

3. RESPONSIBLE ORGANIZATION ELEMENTS

The following organization elements within the DS/T will be responsible for processing the Shipment Planning Worksheet (SPW) throughout the complete process. Specific responsibilities are outlined below:

a. Transportation and Traffic Management Office.

b. Warehousing Division.

c. Shipping Division.

4. PROCEDURES/INSTRUCTIONS FOR PROCESSING FORM

SPW is prepared in five copies by the computer with each MRO processing cycle from appendix D-98. The SPW is prepared for all freight shipments and multiline (5 or more lines) Parcel Post based on depot option, and the order in which the SPWs are sequenced. (Refer to appendix B-66, table 04.)

a. Processing Parcel Post (multi-line):

(1) Area Control and/or Bin Operations Branch receives five copies of SPW and matching DD Forms 1348-1.

(a) Copies one and two, forward to Shipping Documentation Branch.

(b) Copies three and four, forward to Shipment Planning Branch.

(c) Copy five, hold in suspense.

(2) Shipping Documentation Branch will file copies one and two in suspense file awaiting shipped data and followup to Area Control Branch as required.

(3) Shipment Planning Branch will utilize copies three and four for future planning concepts. They will be reviewed periodically to determine possible changes to shipping cycles for geographic areas and possible changes to consolidation criteria.

(4) Area Control Branch will suspend copy five for completion of picking operations.

(a) Upon completion of picking operations, the fifth copy will be utilized to ensure that all lines on the Shipment Unit are accounted for.

(b) Copy five will be forwarded with materiel to packing operation.

(c) Pack, mark, and label materiel in accordance with current instructions.

(d) Annotate for each line item total packages, type of package, package numbers, unit weight, unit cube, total weight, and total cube actually shipped and total weight and total cube for entire shipment unit.

(e) Annotate date shipped in pos. 60-62 and mode of shipment in pos. 27 of TCMD field.

(f) Forward copy five of SPW to Shipping Documentation Branch.

(5) Shipping Documentation Branch will receive copy five and pull suspended copies one and two of SPW and matching ZBM and ZBP cards.

(a) Complete ZBM or ZBP cards as outlined in appendix E-099 P and E-101 P.

(b) File the annotated copy five of SPW and utilize copies one and two as required or destroy.

b. Processing Freight Shipments (LCL - LTL).

(1) Shipment Planning Branch receives five copies of SPW.

(2) Determine initial shipping plan for each Shipment Unit.

(3) Annotate the shipping plan for each Shipment Unit.

NOTE: Storage-in-Transit data available on DD Form 1348-1 and DLA Form 674

(4) Make distribution of SPW as follows:

(a) Copies one and two to Shipping Documentation Branch.

(b) Copies three and four to Area Control Branch.

(c) Copy five hold in suspense file.

(5) Area Control Branch will receive copies three and four of SPW.

(a) Review to determine subsequent actions on assembled unit line items.

(b) Pick line items of Shipment Unit in accordance with appendix E-011 P.

(c) Assemble Shipment Unit.

(d) When the SPW indicates that the shipment will be consolidated (LTL-LCL), accomplish the following:

1. Forward copies three and four with materiel and appropriate Form 1348-1 to designated packing area.

2. Pack, mark, containerize Shipment Unit.

3. Annotate on copies three and four the following data on the SPW in applicable blocks:

a. Total packages.

b. Type of package.

c. Package numbers.

d. Unit weight.

e. Unit cube.

f. Total weight.

g. Total cube.

h. Date to Transportation (TT block).

i. Weight of pallets, skids, and dunnage.

(e) Place third copy of SPW and appropriate DD Form 1348-1 in plastic envelope and attach to Shipping Unit container and forward to Operations Branch.

(f) File fourth copy of SPW.

(6) Operations Control Branch receives materiel and copy three of SPW and accomplishes the following:

(a) Notify Shipping Documentation Branch that materiel has been offered to Transportation.

(b) Place Shipment Unit on designated floor location and annotate the assembly point location on SPW.

(c) Forward third copy of SPW to Commercial Traffic Branch.

(7) Shipping Documentation Branch will receive notification from Operations Control Branch the Shipment Unit has been offered to Transportation.

(a) Pull suspended SPW and annotate date offered to Transportation.

(b) Pull suspended ZBM and/or ZBP card from file.

(c) Keypunch date offered in appropriate card IAW appendix E-099 P or E-101 P and forward to computer processing.

(d) File updated SPW awaiting final shipment.

(8) Commercial Traffic Branch will receive recapped copy three of SPW from Operations Control Branch.

(a) Plan final Transportation Unit shipping action.

(b) Prepare necessary MILSTAMP documentation.

(c) Annotate copy three of SPW with the following data if applicable:

1. Transportation appropriation (block TA).

2. Transportation Release No. (block RN).

3. Bill of Lading (block BL).

4. Routing, complete (block RTG).

5. Equipment Order.

-Date (block EOD)
-Type (block EOY)
-Size (block EOS)

6. Equipment Furnished.

-Date (block EFD)
-Type (block EFY)
-Size (block EFS)

7. Equipment Identification (block EI).

8. Equipment Seal (block ES).

9. Hold Code (block H).

10. Complete TCMD entries as described in DoD 4500.32-R, MILSTAMP. Appendix B-12, E-2. (If shipment is designated Air Challenge Exempt in block 20, enter Code M in pos. 15 of the TCMD.) If block 23 says TRANSCEIVED, reference appendix D-176. Prepare a corrected TCMD with a 12-zone overpunch in pos. 53 IAW with DoD 4500.32-R, Appendix B, Paragraph B-5. Air shipments insert FSC in pos. 5 through 8 with pos. 4 left blank instead of container number. Consolidated shipments select FSC with predominant weight.

(d) Prepare GBL.

(e) Forward GBL and recapped third copy of SPW to Operations Branch.

(9) Operations Branch receives third copy of SPW and GBL for planned Transportation Units.

(a) Load carrier equipment per GBL.

(b) Obtain signature of carrier representative.

(c) Distribute GBL copies to carrier as appropriate.

(d) Annotate date shipped on GBL and SPW.

(e) Forward GBL and matching SPWs to Shipping Documentation Branch.

(10) Shipping Documentation Branch will receive GBL and matching SPWs.

(a) Match suspended copy of SPW.

(b) Pull suspended ZEN cards from file.

(c) Complete keypunching IAW appendix E-128 P.

(d) Forward ZEN cards to computer processing.

(e) File completed copy of SPW.

(f) Forward annotated copy three of SPW and GBL to Commercial Traffic Branch.

(11) Commercial Traffic Branch receives copy three of SPW and GBL.

(a) Make final distribution of GBL copies.

(b) File third copy of SPWs and copy of GBL.

best copy available

c. Processing Freight Shipments (out-loaded from Warehouse Area) will be accomplished the same as outlined in paragraph 4b above, with the exceptions covered below.

(1) Area Control Branch will annotate the warehouse assembly point and weight of pallets, skids, and dunnage used on the third and fourth copy of SPW.

(2) Forward fourth copy of SPW to Shipping Documentation Branch.

(3) Forward third copy of SPW to Commercial Traffic Branch.

(4) The Area Control Branch will perform the same functions as outlined for the Operations Branch in paragraph 4b(9) above.

d. Processing undershipments and overshipments. Area Control Branch will, when it has been determined that denial action (undershipment or overshipment) is necessary, take action as follows:

(1) Circle quantity for line item on SPW and enter in the additional data block opposite line item the quantity actually shipped and the quantity undershipped or overshipped and applicable Action Code as outlined below: i.e.,

Qty	200
Qty shipped	180
Qty undershipped	20
Action code	DT
Qty	20
Qty shipped	24
Qty overshipped	4
Action Code	DB

(2) Following Action Codes will be used:

ACTION CODE	ACTION	DEFINITION/EXPLANATION
DB	Overshipment of Quantity due to Item Packaging Characteristics	Difference between quantity in MRO Control Card and quantity ordered shipped is shipped due to item packaging characteristics.
DD	Undershipped Quantity Difference	Difference between quantity in MRO Control Card and quantity shipped is quantity undershipped (Item Package characteristics).
DE	Undershipped Quantity Difference	Difference between quantity in MRO Control Card and quantity ordered shipped is quantity undershipped. Materiel not available in the type pack specified on the release order (subsistence only).

ACTION CODE	ACTION	DEFINITION/EXPLANATION
DG	Undershipped of Quantity due to Reidentification	Difference between quantity in MRO Control Card and quantity ordered shipped is quantity undershipped. Materiel in physical location found to be misidentified. Reidentification of assets in process and storage location will advise results by DD Form 1225. Assets not available in the physical location to supply requests stock number.
DJ	Shelf-Life Denial	Difference between quantity in MRO Control Card and quantity ordered shipped is quantity denied. Materiel not available having the required shelf-life as specified on the release document. Materiel adjustment transaction is not pertinent.
DK	Condition Change Denial	Difference between quantity in MRO Control Card and quantity denied. Materiel in physical location found to be in other than recorded condition. Materiel adjustment transaction will be provided to the managing DSC. This code is used to indicate the physical materiel has, for example, deteriorated, been damaged, or found to be incomplete and requires the assigning of a new Condition Code.
DL	Exact Quantity Denial	Narcotic materiel not available to supply exact quantity MRO in support of FMS.
DM	Continuous Length Denial	Difference between quantity in MRO Control Card and quantity denied due to nonavailability of one continuous length of item.

ACTION CODE	ACTION	DEFINITION/EXPLANATION
DT	Warehouse Denial	Difference between quantity in MRO Control Card and quantity ordered shipped is warehouse refusal. Stock exhausted for stock number and Condition Code requested. Unsuccessful search of stored materiel has been made. Materiel may be on hand and recorded for a Condition Code other than the requested code.

e. Partial Shipments.

(1) Area Control Branch is responsible for assignment and control of the TCN partial codes when the Shipping Unit requires more than one conveyance.

(2) The TCN is computer assigned and appears in the TCMD block of the SPW. The TCN is composed of 17 digits; the TCN partial code is the sixteenth position of the number. The TCN partial codes will be assigned as follows:

First Partial - Code A
Second Partial - Code B
Third or Final - Partial Code Z

(3) The sixteenth position of the assigned TCN will be changed to agree with partial code assigned to the shipment.

(4) A manually determined TCN, noted by the packer on the flimsy/SPW, will be input by the DIC ZEN card to update the computer record, as a result of a manual consolidation of two or more computer developed shipment units or a manual break of a shipment unit because the "lead" TCN item was denied; otherwise, not available for shipment.

(5) Further instructions relative to assignment of TCNs and TCN partial codes are contained in MILSTAMP, DoD Regulation 4500.32R.

APPENDIX E-017 P

MATERIEL INSPECTION AND RECEIVING REPORT (DD FORM 250) AND ORDER FOR SUPPLIES OR SERVICES (DD FORM 1155)

1. FORM/REPORT USED

Materiel Inspection and Receiving Report (DD Form 250) appendix C-14 or order for Supplies or Services (DD Form 1155).

2. REASON/CRITERIA FOR PREPARATION

a. The Materiel Inspection and Receiving Report (DD Form 250) or the Order for Supplies or Services (DD Form 1155) is completed, upon receipt of shipment from the vendor, indicating inspection and acceptance and/or receipt of materiel.

b. The distribution depot prepares and distributes a DD Form 250 when materiel is received form the vendor without accompanying documentation.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The DS/T is responsible for implementing these procedures.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Sources of Information.

(1) DD Forms 250/1155 is completed based on inspection of materiel.

(2) Data required in blocks 1 through 20, DD Form 250, will be obtained, when required, from local sources as follows:

(a) Prepositioned Materiel Receipt File.

(b) Advance copies of procurement instruments, and any authorized delivery documents, including vendor's invoice and/or packing lists.

(c) Bills of lading and transportation records.

(d) Container markings.

NOTE: In the event above referred to documentation is not available, the DSC will be contacted for missing documentation or information to permit preparation of receiving documents.

b. Preparation of Form/Report.

(1) Complete DD Form 250 as follows:

BLOCK NUMBER	INSTRUCTION
17	If the acceptable quantity received is the same as quantity shipped, indicate by a check mark. If different, enter actual quantity received below quantity shipped and encircle. Enter the damaged, short, unacceptable quantity and note the reason.
21	a. If inspection and acceptance are at origin, block 21A of the DD Form 250, received with the shipment, should reflect a check mark or X for both PQA and acceptance and signature of the Quality Assurance Representative, except as noted in subparagraphs c, d and e below. The receiving activity will leave block 21B blank. b. If inspection is at origin and acceptance is a destination, block 21A of the DD Form 250 received with the shipment should show a check mark for PQA and signature of the Quality Assurance Representative except as noted in subparagraphs c and d below. The receiving activity will complete block 21B to show a check mark for acceptance and signature of the authorized Government representative. c. When acceptance and/or inspection at origin is required and alternative release procedures apply, the contractor shall place an X in the appropriate PQA and/or acceptance. On the next line following the PQA/Acceptance statement, the contractor will enter the capital letters "ALTERNATIVE RELEASE PROCEDURES". Below the signature line, the contractor shall print or type the name of the authorized Government representative and the DoDAAD Code of the representative's office. A signature is not required. d. When inspection at origin is required, COC procedures apply and the COC is used, the contractor shall place an "X" in the PQA box (Block 21A) of the DD Form 250. If acceptance at origin is required, the contractor shall also place an "X" in the acceptance box (Block 21B). On the next line following the acceptance statement, the contractor shall enter in capital letters "CERTIFICATE OF CONFORMANCE". Under the signature line the contractor shall type or print the name of the authorized Government representative and the DoDAAD Code of the representative's office. A signature of the authorized Government representative is not required on the DD Form 250. The contractor-signed COC shall accompany or be entered upon the DD Form 250.

BLOCK NUMBER	INSTRUCTION
	e. When Fast Pay procedures apply the contractor will enter FAST PAY in capital letters in block 21A. No other entries are required. The receiving activity will leave block 21B blank.
	f. If inspection and acceptance is at destination, block 21A should be blank. If the materiel is acceptable the receiving activity will complete block 21B to show X at both PQA and acceptance and the signature of the authorized representative.
	g. If inspection is at origin and acceptance at destination, block 21A should be completed as indicated in paragraph b above. If the materiel is acceptable and block 21A is properly completed, block 21B should be completed to show an X at acceptance and the signature of the authorized representative.
	h. If inspection and/or acceptance is at destination and block 21A is not properly completed or the materiel is not acceptable, block 21B should be left blank and the materiel reported to the managing DSC for disposition instructions.
22	Authorized representative at the receiving activity will sign acknowledging receipt by count and condition. If the date of in-checking is different from the date of delivery (date materiel was accepted from the carrier) the actual date of delivery will be entered.

(2) Preparation of DD Form 250 by distribution depot when materiel is received from the vendor without accompanying documentation:

(a) Data required in blocks 1 through 20 will be obtained from source documents enumerated in paragraph 4a(2) above.

(b) Blocks 17, 21 and 22 will be completed as outlined in paragraph 4b(1) above.

(3) Complete DD Form 1155 as follows:

BLOCK NUMBER	INSTRUCTION
20	If the acceptable quantity received is the same as the quantity shipped in the "Quantity Ordered/Accepted" column, indicate by a check mark. If different, enter the acutal quantity accepted below the quantity shipped and encircle. Enter the damaged, short, unacceptable quantity and note reason.

BLOCK NUMBER	INSTRUCTION
26	If the contract requires acceptance and/or inspection at origin, this block will have the appropriate boxes checked and the signature of the authorized Government representative or be annotated by the contractor as indicated in paragraphs 4b(1), block 21, items in subparagraphs c, d and e above. If the contract requires inspection and/or acceptance at destination, the appropriate boxes will be checked and the document signed by the receiving activity.
27	Check the appropriate block "Partial" or "Final" and when applicable enter the Partial Shipment Number to the right of the word "Partial."
38	Enter signature of the In-Checker.
39	Enter Date of Receipt.

c. Distribution of Form/Report.

Distribution of paying copies of DD Forms 250/1155 will be as follows:

(1) When acceptance is at origin or Fast Pay procedures are used, paying copies are not required.

(2) When acceptance is at destination paying copies will be maintained at the depot under file number 943.40, Receiving Report Files, except for DPSC-managed items.

(3) When acceptance of DPSC-managed items is at destination, paying copies will be forwarded to DPSC.

(4) When acceptance of transshipment materiel is at destination, paying copies will be forwarded to the appropriate DSC.

5. DISPOSITION OF FORM/REPORT AFTER FINAL ACTION

a. Completed DD Form 250/DD Form 1155 will be filed in the Completed Award Document File, which will be retained for three months after receipt of final shipment, except as noted in paragraph (b) below.

b. DD Forms 250/1155 which serve as proof of acceptance and support an acceptance report (DIC PKN/PKP) will be maintained separately and filed by date of acceptance. The files will be cutoff annually, held for one year, and then retired to the Records Center where they will be retained for a period of six years and three months after the cutoff date.

APPENDIX E-018 V

PREPOSITIONED MATERIEL RECEIPT CARD VIOLATIONS

1. INPUT DOCUMENT

Prepositioned Materiel Receipt Card (PMRC), DIC DU_, appendix B-18, for materiel due-in from procurement sources or local PMR File update actions, and DW_, appendix B-19, for materiel due-in from other than procurement sources or local PMR File.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-45.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

Provides for the research, correction, and reentry of PMRCs which have been rejected from computer processing. DS/T will receive a Violation Printout, appendix F-85, of DIC DU_ and DW_ cards rejected. Receipt Documentation Branch is responsible for the correction of errors and reentry of the card as required. Reasons for rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AB	Invalid RIC From.
AC	Invalid RIC To.
AF	Invalid Condition Code.
AI	Invalid or blank document number field.
AN	Invalid UI.
AS	Invalid quantity.
AY	Invalid stock number.
BJ	Invalid supplementary address.
EX	Invalid supplementary PIIN.
HP	Invalid estimated delivery date.
3P	Maximum PMR records (10) established.
CK	Invalid type pack.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Data in pos. 67-69 of the input is other than alphanumeric.

(2) PROCESSING/RESEARCH REQUIRED:

Review the Violation Printout and by using data in pos. 4-6 and/or pos. 30-42, develop the RIC of the receiving depot:

(a) Field position 67 is constant S.

(b) Field position 68 is the identity code of the receiving depot as developed for appendix B-66, table 04.

(c) Field position 69 is equal to pos. 4 of input record to depot or may be developed by utilizing logic developed in subparagraph b below.

b. VIOLATION REASON CODE AC.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Data in pos. 4-6 of the input card in other than authorized DSC/ICP.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout and attempt to interpret the document number to determine the initiating DSC. Document number beginning with:

SC0100 or		DLA100 usually mean S9T
SC0200 or		DLA120 usually mean S9M
SC0300 or		DLA13H usually mean S9S
SC0400 or	UDGSC or	DLA400 usually mean S9G
SC0500 or	UDISC or	DLA500 usually mean S9I
SC0700 or	UDCSC or	DLA700 usually mean S9C
SC0900 or	UDESC or	DLA900 usually mean S9E

(b) If proper RIC cannot be determined from review of the document number, obtain an Item Locator Data Inquiry Answer Listing, appendix F-37, by NSN and determine the cognizant DSC based on the recorded Commodity Manager Code. Following cross-reference applies:

COMMODITY MANAGER CODE	ROUTING IDENTIFIER CODE
C	S9C
E	S9E
G	S9G
I	S9I
M	S9M
S	S9S
T	S9T

NOTE: The Item Locator Data Inquiry Answer Listing, appendix F-37, can be obtained by preparation and submission of an Item Locator Inquiry Card, appendix B-79 with DIC ZBJ citing Action Code FE.

c. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

A document reflecting an invalid Condition Code, pos. 71.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Determine if prereceipt documents are available (Contracts, Purchase Orders, advance copies of receiving reports) from the Active Award Document Files, or (advance copies of DoD Single Line Item Release/Receipt Documents (DD Form 1348-1) information copies of manual requisitions or GBLs) from the Advance Receiving Document Files (from other than procurement sources).

(b) When such advance documentation is available, determine correct condition of materiel due-in.

(c) When required advance documentation is not available, notify the submitting DSC (by telephone or teletype) furnishing all details related to the item listed in the Violation Printout, and request the correct condition of the materiel due-in.

(d) On receipt of correct condition code, process for reentry as indicated below.

d. VIOLATION REASON CODE AI.

(1) REASON FOR VIOLATION/ERROR CONDITION:

A document reflecting a blank or invalid document number field, pos. 30-43.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Notify the submitting DSC (by telephone or teletype) furnishing all details related to the item listed on the Violation Printout and request the correct document number for the item involved.

(b) On receipt of the correct document, process for reentry as indicated below.

e. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid UI, pos. 23-24.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain an Item Locator Data Inquiry Answer Listing, appendix F-37, by preparation and submission of Inquiry Card, DIC ZBJ, appendix B-79, with Action Code FE in pos. 79-80, to ODS.

(b) In event the Item Locator Data Inquiry Answer listing fails to furnish the correct UI, screen the Federal Supply Catalog to determine the correct UI for the NSN involved.

(c) Should local research indicated above fail to furnish correct UI, notify the submitting DSC (be telephone or teletype) furnishing all details pertaining to the violation and request the correct UI be furnished.

(d) On determination of the correct UI, process for reentry as indicated below.

NOTE: As a result of determination of correct UI for the stock number, it may be necessary to update this field in the basic Item Locator Record, by preparation and submission of DIC ZBC, Item Locator Record Card, appendix B-73.

f. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Quantity field, pos. 25-29.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Determine if prereceipt documents are available (i.e., contracts, purchase orders, advance copies of receiving reports) from the Active Award Document Files, or (advance copies of DoD Single Line Item Release/Receipt Documents, information copies of manual requisitions or GBL) from the Advance Receiving Document Files (from other than procurement sources).

(b) When such prereceipt documentation is available, attempt to determine the correct quantity due-in, by comparison of the Stock Number, Document Number, Line Item Number, Delivery Order Number, Supplementary Address, and other relatable fields on the Violation Report, appendix F-85.

(c) If the prereceipt documentation fails to furnish the correct quantity intended, notify the DSC (by telephone or teletype) furnishing all details of the violation and request advise as to the correct quantity involved.

(d) On determination of the correct quantity due-in, process for reentry as indicated below.

g. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Invalid Stock Number, pos. 8-20.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Determine if prereceipt documents are available (i.e., contracts, purchase orders, advance copies of receiving reports) from the Active Award Document Files, or (advance copies of DoD Single Line Item Release/Receipt Documents, information copies of manual requisitions, or GBLs) from the Advance Receiving Document Files (from other than procurement sources).

(b) From the prereceipt documentation, determine the correct Stock Number, by comparison with Document Number, Line Item Number, Delivery Order Number, Supplementary Address, and other relatable fields on the Violation Report, appendix F-85.

NOTE: If investigation reveals correct NSN contains an alpha character in pos. 14 and the Commodity Manager if M, reflected in pos. 69, prepare manual PMRC DIC DU_ (appendix B-18) or DW_ (appendix B-19) and retain manual file in the Receiving Document Branch.

(c) If correct stock number cannot be determined from prereceipt documentation, notify the submitting DSC (by telephone or teletype) furnishing all details related to the violation and request DSC to furnish correct NSN intended.

(d) When correct NSN is determined, process for reentry as indicated below.

h. VIOLATION REASON CODE BJ.

(1) REASON FOR VIOLATION/ERROR CONDITION:

This code indicates that a PMRC, DIC DU_/DW_, has been received with other than alpha/numeric/blank data in the Supplementary Address field, pos. 45-50.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Processing personnel will attempt to obtain a valid Supplementary Address by querying the DSC/ICP reflected in pos. 67-69.

(b) Continue processing as outlined in paragraph 5 below.

i. VIOLATION REASON CODE EX.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Data in pos. 77-80 of the input is other than:

(a) DIC D4_ is alpha/numeric.

(b) DIC DW_ is blank in pos. 77-78, may contain RB or blanks in pos. 79-80.

(2) PROCESSING/RESEARCH REQUIRED

Review data in pos. 77-80 and determine the invalid characters. For DIC SU_, review the contract file to determine the valid data, annotate on the violation report, and prepare for reinput. For DIC DW_, determine whether receipt is the result of a frustrated shipment; if so, pos. 77-80 are blank, blank, RB; if not, pos. 77-80 are blanks.

(3) On development of required data, process for reentry as indicated below.

j. VIOLATION REASON CODE HP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Estimated Delivery Date, pos. 73-75, contains blanks or alpha characters.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Determine if prereceipt documents are available (i.e., contracts, purchase orders, advance copies of receiving reports) from Active Award Document Files, or advance receiving documents, or GBLs.

(b) When such documentation is available, determine the correct EDD.

(c) When prereceipt documentation is not available, notify the DSC (by telephone or teletype) furnishing all details of the violations and request the correct EDD.

(d) On determination of correct EDD, process for reentry as indicated below.

k. VIOLATION REASON CODE 3P.

(1) REASON FOR VIOLATION/ERROR CONDITION:

This code indicates that for a commissary item 10 PMR records have been established. This is the maximum number of subrecords that can be entered into the PMR File.

(2) PROCESSING/RESEARCH REQUIRED:

Maintain manual record until PMR File is reduced to less than 10 records.

l. VIOLATION REASON CODE CK.

(1) REASON FOR VIOLATION/ERROR CONDITION:

A blank type of pack field was received for a non-DICOMSS item but the Item Manager was S or U.

(2) PROCESSING/RESEARCH REQUIRED:

Determine correct type of pack (1, 2 or 4, appendix A-4) and process for reentry.

5. REENTRY INSTRUCTIONS

a. Upon determination of the correct data element, annotate the correction on the Violation Printout, appendix F-85, directly below the invalid entry. Ink or a distinctive colored pencil should be used for ease in keypunching.

b. Forward annotated Violation Printout to ODS, via keypunch services, for preparation of a new PMRC, DIC DU_/DW_, in the format of appendix B-18 or B-19. The corrected PMRC is to be entered into applicable mechanical process.

6. FLOW CHART

Flow chart not required.

APPENDIX E-019 P

INSPECTION SCHEDULES - SHELF-LIFE ITEMS

1. PURPOSE

This procedure describes the use of shelf-life schedules in the conduct of in-storage surveillance inspection. The F-20 listings provide a schedule by commodity and warehouse in location sequence of shelf-life items, nonshelf-life items, and Subsistence Local Purchase items due for inspection during a given month or past due and in a delinquent status.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-116.

b. Appendix C-54.

c. Appendix E-116 P.

d. Appendix F-20.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Stock Readiness Branch, Warehousing Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The inspection schedule will be used for reviewing, planning, scheduling, and controlling surveillance inspection and operational testing on a monthly basis. The Inspection Schedules Shelf-Life Items, appendix F-20, is prepared by Data Systems on the first of each month IAW appendix D-2.

b. Reference appendix E-116 P, Inspection Schedules and Inspection Test Cards, will be received and controlled by the Stock Readiness Branch. These will be forwarded to the Stock Readiness Branch for use in conducting physical inspection of scheduled items. Completed schedules will be used by the Stock Readiness Branch for processing IAW appendix E-116 P.

c. Stock Readiness Branch will accomplish the physical inspection of scheduled items IAW the applicable Serviceability Standards, and as appropriate, take the following action:

(1) Initiate DD Form 1225 when any adjustment action is required as a result of inspection of scheduled items (see appendix E-116 P).

(2) Initiate DD Form 1222, when required, IAW appendix E-033 P.

(3) Annotate ZCO Inspection Test Card with new (next) inspection date when materiel is found to be serviceable and no adjustments are required. Also annotate inspection test when a DD Form 1225 and/or DD Form 1222 is prepared. In all cases, cards will be annotated to reflect action taken for each item and/or location on the schedule.

d. Stock Readiness Branch will annotate required updating entries on the Inspection Test Card, DIC ZCO, IAW appendices B-116 and E-116 P.

APPENDIX E-020 P

USING THE LATE RECEIPT REPORT

1. FORM/REPORT USED

Appendix F-71, Late Receipt Report.

2. REASON/CRITERIA FOR PREPARATION

a. The Late Receipt Report is automatically produced daily from the Suspended Receipt File. All procurement receipts which have been in process more than three days and other receipts which have been in process for more than six days are printed. Only those receipts in process more than four days (procurement) or more than seven days are actually late IAW established processing standards.

b. A secondary or minor usage of the report is to permit, via Materiel Receipt Followups, the special identification of procurement receipts for which expeditious completion/confirmation is required.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Receipt Documentation Branch, Receiving Division will review part I of the report and accomplish the following actions:

(1) Expedite processing of receipts that require action on the date of the report to avoid being charged as late for MIS reporting.

(2) Followup and expedite processing of receipts which have not been processed within the authorized time-frame.

(3) Identify and correct trouble areas in receipt processing and normal document flow.

b. Warehouse Control Centers, Storage Division will review their respective portions of part II of the report and accomplish the following actions:

(1) Expedite stowing of receipts that require action on date of report to avoid being charged as late for MIS reporting.

(2) Followup and expedite the stowing of receipts which have not been processed within the authorized time-frame.

(3) Coordinate with Receiving Division as necessary to determine the status of receipts appearing on the report which are not available for stowage action.

4. PROCEDURES/INSTRUCTIONS

a. Sources of Information.

All data appearing on the Late Receipt Report is obtained from the Suspended Receipt File. Records are created in this file when a Type A Inquiry is processed upon receipt of materiel. Receipt Confirmation and Stow Notice inputs update these records as receipts move through these stages of processing.

b. Preparation of Form/Report.

The Suspended Receipt File is processed at the end of each workday to produce appendix F-71 report which is available for use the following morning.

c. Distribution of Form/Report.

The report is produced in two copies. One copy of both parts is distributed to the MSO, DS/T. A copy of part I is distributed to Receiving Division, a copy of part II is provided to Storage Division. Additional distribution may be established by local depot option, if necessary.

5. PROCEDURES/INSTRUCTIONS FOR USING THE REPORT

a. Receipt Documentation Branch, Receiving Division will take the following actions:

(1) Review part I of the Late Receipt Report and identify those receipts appearing on the report as one day late. These receipts will not be counted as late on the MIS reports if a valid Receipt Confirmation is processed in conjunction with a valid Receipt Stow Notice prior to the close of business on the day the report is received. The status of each of these receipts will then be determined.

(a) If the report indicates the receipt has been stowed (date printed in the column headed "STOW DATE") it is only necessary to expedite action required to prepare and process a Receipt Confirmation Card (RCC) IAW appendix E-108 P.

(b) If the report indicates the receipt has not been stowed (blank entry in the column header "STOW DATE") processing of RCC should be expedited as indicated above. In addition, it should be determined if and when the materiel was turned over to Storage Division for stow action. If the materiel is still in Receiving Division, Operations Branch should be notified to expedite movement of the materiel and the appropriate Warehouse area in Storage Division should be alerted to the fact that a potential late receipt is being forwarded. If the materiel has already been turned over to Storage Division, the warehouse area to which the materiel was forwarded may be contacted to determine status of the stow action. However, these receipts will also appear on part II of the Late Receipt Report and Storage Division should already have initiated expediting action.

(c) When it is determined that the RCC has been processed and the receipt has not been cleared, the appendix F-85, Violation Printout, produced the day after the RCC was processed will be reviewed to determine if the confirmation input was rejected. If previously rejected, the RCC input will be corrected and reinput IAW appendix E-108 V. If the RCC does not appear on F-85 reports produced since the processing date, a new RCC input will be prepared and processed IAW appendix E-108 P.

(2) For those receipts which are identified as being two or more days late, expediting efforts initiated when the receipt first appeared on the appendix F-71 report will be intensified.

(3) When it is determined that the Suspended Receipt Record appearing on the Late Receipt Report is erroneous and should be deleted, a Suspended Receipt Record Deletion will be processed IAW appendix E-182 P.

b. Office of the Chief, Storage Division, will take the following action:

(1) Receive part II of the Late Receipt Report, separate portions of the report by warehouse area and immediately distribute them to the appropriate Warehouse Control Centers for expediting action.

(2) Those late or potentially late receipts which have not been confirmed (no RCC process by Receiving Division) or stowed will not be identified by Warehouse Area. If an excessive number of receipts appear on this portion of the report, it is possible that most of them will be forwarded for stowage that day. Necessary action should be taken to coordinate with Receiving Division to determine the workload that can be expected and assure that the various warehouse areas will be able to handle the stowage actions.

c. Warehouse Control Centers, Storage Division, will take the following actions:

(1) Review their respective portions of part II of the Late Receipt Report and identify those receipts which are one day late. These receipts will not be counted as late on MIS reports if a valid Receipt Stow Notice is processed prior to the close of business on the day the report is received. The status of the receipts will then be determined.

(a) If the materiel is available in the area for stowage the stow action will be expedited and the Receipt Stow Notice processed as soon as possible IAW appendix E-110 P.

(b) If the materiel cannot be found and there is no evidence that it was received, Operations Branch, Receiving Division will be contacted to determine if and when the materiel was forwarded. When the materiel is found in either the receiving or storage areas, movement to location will be expedited.

(c) If it is determined that the receipt has been transferred to another storage area for stowage, that area will be notified immediately to expedite the stow action.

(d) If it is determined that the Receipt Stow Notice has been processed and the receipt has not been cleared, appendix F-85, Violation Printout, provided the day after the stow notice was processed will be reviewed to determine if the input was rejected. If previously rejected the Stow Notice will be corrected and reinput IAW appendix E-110 V. If the Stow Notice does not appear on F-85 reports produced since the processing date, a new Receipt Stow Notice input will be prepared and processed IAW appendix E-110 P.

(e) If the materiel cannot be found, notify Receiving Division to initiate lost receipt procedures IAW, appendix E-047 P.

(2) For those receipts which are identified as one or more days late, expediting efforts initiated when the receipt first appeared on appendix F-71 report will be intensified.

d. On certain occasions, receipt lines not yet late nor even approaching late criteria may appear on either part I or II of the report. These receipts will be specifically identified with the word Expedite attached at the end of the appropriate report line following Type Inventory Code (TIC). These receipts will receive special consideration and the required confirmation, storage, or both, update actions will be accelerated. This identification has occurred through receipt of a Materiel Receipt Followup, appendix B-59, DIC DXA, which has matched a receipt in-process IAW appendix D-60.

6. DISPOSITION OF FORM/REPORT

Destroy when all listed receipts have been cleared.

APPENDIX E-020 V

MATERIEL RECEIPT CARD VIOLATIONS

1. DOCUMENTS

Materiel Receipt Cards, DICs D4_ and D6_.

2. RELATED APPENDICES

a. B-20, B-21, Materiel Receipt Cards.

b. B-108, B-109, Materiel Receipt Confirmation Cards.

c. D-69, Processing Materiel Receipt Confirmation Cards.

3. PURPOSE AND RESPONSIBILITIES

a. This appendix provides instructions for the review, correction, and transmission of Materiel Receipt Cards, DICs D4_ and D6_, mechanically produced with an invalid or blank Routing Identifier Code (From) field, pos. 67-69.

b. This situation can occur when there is no PMR record established and a receipt is processed IAW appendices D-69 and D-70.

c. This output reject is identified under Violation Reason Code AB and is the responsibility of the Receipt Documentation Branch.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. Determine the Commodity Manager Code for the Stock Number involved from review of the Emergency Item Locator Record Listing, appendix F-51 or by inquiring the locator file with DIC ZBJ. Cross-reference the Commodity Manager Code to the applicable Routing Identifier Code for that commodity at the local activity.

b. Annotate the Violation Printout, appendix F-85, directly below the RIC-From field, pos. 67-69, and forward for keypunching a new Materiel Receipt Card, DIC D4_ or D6_, in the format of appendix B-20 or B-21, as applicable.

c. The new Materiel Receipt Card, DIC D4_ or D6_, is to be input to the computer for Entry-to-Exit processing and transmission to the appropriate Defense Supply Center.

5. FLOW CHART

Flow chart not required.

APPENDIX E-021 P

DATA ENTRY SYSTEM INPUT

1. PURPOSE

This procedure provides general instructions for entering MOWASP (including WOPACS and DEPMEDS) batch inputs through the Four-Phase Data Entry System or via Program $$UWME10 (see subparagraph 5b below for $$UWME10 procedure).

2. APPENDICES USED IN THIS PROCESS

The related B appendices are listed in paragraph 4d below.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Any depot element which will process the MOWASP inputs listed in paragraph 4d below through the Data Entry System will utilize this procedure.

4. PROCEDURES/INSTRUCTIONS

a. Detailed instructions for operating Four-Phase Data Entry equipment are contained in the Data IV/70 Operators Manual provided by the manufacturer and the MOWASP Data Entry Operators Manual, DLAM 4745.1, Part 8.

b. Entry capability is provided for the DICs listed in paragraph 4f below. The more significant inputs are validated to the maximum extent possible when the entry is made. Validation of the remaining inputs will be limited to checking for complete data elements and alpha/numeric characteristics. In addition, it is possible to enter any 80-character record without validation (see subparagraph i below). This capability may be used for any input but is intended primarily for those low volume inputs which do not warrant a unique data entry program.

c. When entry of any input causes an error message to appear, the correction may be made immediately in accordance with the appropriate B or E appendix. In those cases where the data entry validation is not as detailed as the validation described in the B appendix, it will be possible to have an input accepted by the Data Entry System and subsequently be rejected by the MOWASP System. When this occurs the rejected input will appear on the Validation Reject Report (appendix F-85) or TQUENTRY Reject Listing (appendix F-292) for WOPACS the following day. Local procedures for correcting and reentering all rejected transactions should be established.

d. MOWASP DICs that can be input through data entry are listed below in alphabetic order by major functional area. Also listed is the corresponding B appendix, the Data Entry JOB_NAME, the Program Level (PL), and a reference to that section of subparagraph e below of this procedure that explains the specific application(s) for each Program Level.

(1) Warehousing:

DIC	B APP.	JOB NAME	PL1	PL2	PL3	PL4	PL5	PL6
ZBY	83	UWMDDE33	(1)					
ZBZ	83	UWMDDE33	(1)					
ZC5	83	UWMDDE33	(1)					
ZUT	112	UWMDDE31	(1)					

(2) Shipping:

DIC	B APP.	JOB NAME	PL1	PL2	PL3	PL4	PL5	PL6

(4) Customer Complaint:

DIC	B APP.	JOB NAME	PL1	PL2	PL3	PL4	PL5	PL6
	09	UWTM01	(1)					

NOTE: Procedures for input of this DIC are covered in appendix E-006P.

e. An explanation of the specific applications for each Program Level for the above listed DICs follows. In an effort to conserve space, a mnemonic abbreviation is used for the data elements (see subparagraph f below).

(1) In general terms, the field position reference and data elements of the display format conform to the referenced B appendix. For those DICs that have an Action Code, it is displayed as the second field. This change allows validation and selection of subsequent data elements.

(2) For those DICs that have skip/dupe capability, one Program Level is a general description explaining the "must enter" field in the B format. This field is necessary to ensure the system does not enter a writing loop and automatically fill memory when the operator is using the B format. The operator should follow the screen instructions to get to the next Program Level.

(3) A separate Program Level provides skip/dupe capability. Normally, PL2 is the actual skip/dupe line. Upon keying the appropriate Program Level, a header line for 80 columns is displayed. The DIC entry is made and the cursor is at the first blank field. At this point, the operator has three options.

(a) If the operator wishes to duplicate certain fields (i.e., condition code, RIC To, etc.) a data entry in the appropriate column will cause that data to be duplicated in every transaction until the data is changed. Some validation is performed at time of entry, but it is usually less than required in the normal B format.

(b) If the operator wishes to skip certain fields, the "illegible key" is used to fill the field with question marks. This key fills the field with special characters that are not rejected by the skip/dupe line validations. During routine B format processing, these question marks result in the corresponding fields being skipped.

(c) If the operator leaves blanks in the skip/dupe line, the cursor will stop for entry in the corresponding fields during the B format processing. The validation entry criteria in the B format then becomes the entry requirement.

(d) When using the skip/dupe line, the operator must either go to the end of the 80 columns or manually select the B appendix Program Level format. If the B appendix Program Level is manually selected, the remaining columns are blank and blanks in the skip/dupe line cause the cursor to stop for entry of each field of the B appendix.

CAUTION: It should be noted that if a skip/dupe line is unlocked and changed, and any completed following records are unlocked, unpredictable results may occur. The procedure that should be followed is that a new skip/dupe line should be created from the last completed data record, and new data will be skipped/duped from that record.

(4) If a particular DIC has skip/dupe capability, the B format is spaced down a few lines so the dupe line remains on the screen (see subaragraphs e(2) and (3) above). In addition to the normal B format validation, the program checks the dupe line for (a) Dupe data, (b) Illegible Key Entries (question marks), or (c) Blanks in the skip/dupe line. The operator would enter data when condition (c) exists. If the entire skip/dupe line is blank, the Program Level functions as a normal B format (see subparagraph e(1) above).

(5) MOWASP generated prepositioned cards can be reentered via the data entry card reader using the procedures described in the MOWASP Data Entry Operators Manual (DLAM 4745.1, Part 8) and then using the appropriate Program Level for completion. In most instances, the fields to be completed will appear first on the display followed by those elements prepunched by the system. When using prepositioned cards, it is important to keep the cards in the same sequence they were input through the card reader.

(6) Separate Program Levels have been established for DICOMSS transactions. These formats follow the B appendix except they allow for the alpha in the NSN.

(7) Separate Program Levels have been established for prepositioned cards for DICOMSS. The Program Level is used in a manner similar to subparagraph e(5) above and will allow the alpha in the NSN.

(8) Some DICs have special requirements and/or formats and are addressed individually.

(a) ZEN. Individual Program Levels have been established for specific Action Codes:

1. Action Codes GQ and GW.

2. Action Codes GC and GX.

3. Action Codes GR, GS, GT, GY and GZ. Additionally, the Mode Shipped and GBL Identification Code are displayed and entered before the Shipment Release Code.

4. For prepunched cards used with Action Codes GT and GZ.

(b) ZBM. Mode Shipped entered before quantity to assist validation.

(c) A5_, ZZ_. Signal Code entered before Supplementary Address to assist validation. Hardware limitations prevent entry of A55 or A5E transactions with the additional 8 or 9 punch in the third position. Input of these transactions will require use of other available equipment and procedures.

(d) ZVK. Separate Program Levels for the following:

1. Program Level 1 for NMFC Header.

2. Program Level 2 for NMFC Description.

3. Program Level 3 for Freight Description Reports Control.

(e) ZBA (BARS). A special Program Level has been established to allow processing of data associated with the DDTC Bin Automated Replenishment System (BARS). For Action Codes FF and FX a quantity field (pos. 24-28) and bin level field (pos. 72-76) are included in the display format. The DDTC System processes ZBA transactions through BARS and then into MOWASP. BARS processing deletes those with Action Code FF and modifies those with Action Code FX.

(f) ZBH. A separate Program Level has been established to allow reinput of the Locator Survey Card (DLA Form 542) to report changes and deletes. Using the DLA Form 542 as a prepositioned card, the display format begins with the Action Code. The following options can be used:

1. If the Action Code is blank, the cursor moves to pos. 62-63, Discrepancy Code, corresponding to Block D and any data recorded in blocks D, E or F can be added to the record.

2. If the Action Code is either FV, FW or FY, the transaction is complete and the next record comes up automatically.

3. If the Action Code is FZ, there will be a change in the data for pos. 27-61 (blocks M, N, A, B, C and to pos. 62 of D on the DLA Form 542). Some data may already be in these fields, but as the cursor moves from field to field, the data is blanked out and new data can be recorded. It is not necessary to use the "Aux Dupe" key after the last entry is made. A "record up" will blank the remaining fields and bring up the next record.

CAUTION: With Action Code FZ, any fields between pos. 27 and 62 containing data will be counted as a survey error. This Program Level has been programed to automatically blank these fields. If the operator should back up to look at

a record and then go forward, any entries with Action Code FZ will be blanked and the revised data will be lost. If the operator backs up, all FZ transaction must be rekeyed.

f. To reduce display space requirements Data Entry formats utilize mnemonic abbreviations for data element names. A reference list is provided below:

ABBREVIATIONS	DEFINITION
AAC	Activity Address Code
ACB	Area Control Branch
ACCO	Acceptable Carryover
ACTN-CD	Action Code
ADM	Administering Location Code
ADD-PACK-MAP	Add Per Military Assistance Program Pack
ADD-PACK-OS	Add Per Overseas Pack
ADJ/CANC/DEN-QTY	Adjustment/Cancelled/Denied Quantity
ADJ-QTY	Quantity to be Adjusted
ADRS-DATA	Address Data
ADRS-FL-ID	Address File Identifier
ADRS-TY	Type Address
ADV/STAT-CD	Advice or Status Code

US-NO	Unit of Schedule Number
XPRIN-DT	Expiration Date

g. In addition to the formatted inputs, a general purpose entry capability is provided for DICs not included in the list. This input display consists of 80-entry position identifiers (numbers 1 through 80) across the Cathode Ray Tube (CRT) face. Any 80-character record format (including all blanks) may then be keyed beneath the appropriate numbers. A counter in the lower left hand corner of the display indicates the position of the cursor at any given time. The input will not be validated by the Data Entry System. Selection of the JOB_NAME by the operator to call the general purpose input display is determined by how the record is to be processed, as follows:

(1) MOWASP Input - JOB_NAME: UWRDDE99

This JOB_NAME will be selected when the input is to be processed by MOWASP System. Included among these would be inputs from the Defense Supply Center (DSC) which had been rejected by MOWASP and which require correction and reentry by depot personnel, e.g., Prepositioned Materiel Receipt Cards (PMRC), DIC DU_ and DW_.

(2) MOWASP Output - JOB_NAME: UWMDDE99

This JOB_NAME will be selected when the input to the general purpose display is to be processed by the MOWASP Exit program and output for AUTODIN transmission. These outputs must be recognized as valid transactions in the MOWASP exit program and would include manually prepared outputs that may be required to be transmitted to the DSC.

(3) AUTODIN Output - JOB_NAME: UWSDDE99

This JOB_NAME would be selected for entries to be output to AUTODIN, but which are not processable by the MOWASP Exit program, e.g., Transportation Movement Control Documents (TCMD), DICs TX_, TJ_, TE_, and R1_.

(4) WOPACS Input - JOB_NAME: UWWDDE99

This JOB_NAME will be selected for those WOPACS DICs not listed in paragraph 4d(4) above, e.g., DICs YLB, YLC, YLD, YL7, YL8, and YL9.

i. All MOWASP Data Entry formats can be key verified as prescribed in the Data IV-70 Operators Manual provided by the manufacturer. When the verify mode is used the transaction data is scrambled and 100% verification is required.

5. DATA ENTRY INSTRUCTIONS

a. Four-Phase.

(1) Data entry operators will use the Operators Manual and the DIC/Job Name Cross-Reference to obtain the appropriate display format on the screen. Data may then be keyed from the source document. The mnemonic name for each data element will appear one at a time until the entire input format is entered. The next data element name will not appear until the previously entered element has been validated and accepted. The mnemonic abbreviation list provided above may be used to identify the entry areas for specific data elements.

(2) When the system detects an erroneous entry an appropriate error message will appear on the bottom left hand corner of the display screen. Additional data elements cannot be entered until the erroneous entry has been corrected.

(3) Entry of a valid input to the Data Entry System causes a record to be written on a disk file. After a batch(s) of records has been completed it is necessary to have the records reformatted and transferred from the disk to a magnetic tape. This tape transfer proccess is described in detail in the MOWASP Data Entry Operators Manual, DLAM 4745.1, Part 8. The resultant tape is then entered directly to the MOWASP System for processing.

b. Program $$UWME10

(1) When the terminal is available the operator will key the call characters for the listed DICs as follows:

$$UWME10 for a memo display of these DICs:

UWME10-00DATA ENTRY (MENU)

CHOOSE ONE OF THE FOLLOWING DIC'S:

DIC	APPENDIX	DIC	APPENDIX	DIC	APPENDIX	DIC	APPENDIX	DIC	APPENDIX	DIC	APPENDIX
CKK	B-15	DAC	B-22	DJA	B-26	DKA	B-25	DZD	B-6	D6B	B-21
		ZAD	B-62	ZAF	B-158	ZAN	B-107	ZAS	B-70	XMM	B-224
		ZAX	B-90	ZAY	B-170	ZBA	B-71	ZBC	B-73	XMR	B-178
ZAC	B-22	ZBG	B-77	ZBH	B-78	ZBJ	B-79	ZBO	B-61	ZAT	B-96
ZAV	B-67	ZCO	B-116	ZCO	B-116	ZEP	B-130	ZEU	B-132	ZBD	B-73
ZBE	B-75	ZHW	B-74	ZJA	B-26	ZKA	B-30	ZUK	B-89	ZB1	B-61
ZCT	B-115	ZUR	B-84	ZUW	B-211	ZZQ	B-146	Z2A	B-300	ZEV	B-105
ZEW	B-106	Z2D	B-303	Z2E	B-304	Z2G	B-305	Z2H	B-305	ZUM	B-135
ZUN	B-72									Z2B	B-301
Z2C	B-302									Z2L	B-303

(2) The terminal application includes provisions for skip/dupe. The first panel for each DIC is used to set up the skip/dupe option. Data entered on this panel is not processed to the system. Depressing of terminal key SF1/PF1

will return screen to the menu panel and pressing terminal key SF2/PF2 will return screen to skip/dupe for the applicable DIC. The help screen can be displayed by depressing the SF3/PF3 key.

(3) Content validation is performed on the transaction following the use of the ENTER key. As with the Four-Phase application, file compatibility rejects will appear on the next F-85 reject report.

(4) The LOC/COND-CD-TO field (pos. 60-71) of the ZAC is a dual purpose field. For entry of the COND-CD-TO, enter the correct code in pos. 60 and use the TAB key to move to the next field. When the operator enters ACTN-CD: RA and uses the ENTER key, the Condition Code is moved to pos. 66.

(5) DIC ZBA (other than BARS) is expanded to allow for entry of additional Storage Locations for a single NSN per entry. To enter additional Warehouse Locations press the FORWARD FIELD CURSER (TAB KEY) prior to pressing the ENTER key. This will place the curser in the next Warehouse Location field.

(6) Certain DICs which are included in the $$UWME10 program may be restricted to specific CRT terminal locations at the discretion of the depot. In the event an operator attempts to input a transaction on a restricted terminal, the following message will appear on the CRT screen:

FUNCTION REQUESTED NOT AVAILABLE AT THIS TERMINAL. CONTACT YOUR SUPERVISOR FOR ASSISTANCE.

APPENDIX E-022 P

MATERIEL ADJUSTMENT CARD

1. FORM/REPORT USED

Appendices B-22 and C-16, Materiel Adjustment Document, DD Form 1487.

2. REASON/CRITERIA FOR PREPARATION

This card is prepared in the format of appendix B-22 and forwarded to the DSC/ICP when:

a. Materiel in storage is unsuitable for issue due to packaging deficiencies, inadequate tags, labels, or other identifying media and immediate corrective action is beyond the capability of the depot.

b. Materiel is transferred to Condition Code B, C, D, F or G.

c. Inspection of materiel in storage other than specified in chapter 70, of this manual, reveals a change of condition to unserviceable, uneconomically reparable and there is no evidence of fault or neglect.

d. Materiel is discovered in storage to possess a latent defect which is thought to have existed at time of receipt from a vendor but was not discovered at that time. In this instance, a Materiel Adjustment Card (DIC ZAC) will be used to place the materiel in Condition Code L <u>only</u> when complete contract information is available (PIIN, CLIN, and SUP PIIN, if applicable). If complete contract information is not available, materiel will be placed in Condition Code J through use of a DIC ZCO IAW appendix E-116 P and appendix E-160 P.

e. Materiel which has been placed in a suspended condition (J, K, or L) upon receipt is reclassified upon completion of condition determination or receipt of disposition instructions from the managing DSC. This would include the reclassification of materiel which had been placed in Condition Code L as a result of a latent defect as discussed in paragraph 2d above.

f. Materiel is reclassified from one Condition Code to another Condition Code in cases not specified above, except reclassification of materiel in storage to Condition Code J, or from Condition Code J (except when materiel was placed in Condition Code J upon receipt), in which instances a DIC ZCO will be processed IAW appendix E-116 P and appendix E-160 P. The ZCO will produce a Materiel Adjustment Card, DIC DAC, to notify the DSC of the Condition Code change.

g. Materiel reclassified from Condition Code A to L specifically as a result of a Materiel Receipt Confirmation (D4_) in excess of allowable or authorized contract quantity. In this instance the DSC will initiate the reclassification by DIC DAC forwarded to the depot.

h. Materiel suspended by DIC ZAC action may be further identified by specific location data added after the record has been suspended. A Materiel Adjustment Card, DIC ZAC, prepared IAW appendix B-22, Action Code RB, will serve to update or add location data to any record originally established via a Materiel Adjustment Card, DIC ZAC, action.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Receiving Division and the Stock Readiness Branch, Warehousing Division, are responsible for preparation and processing of this form.

b. Any DSC, upon determination that materiel from procurement source has been received in excess of allowable contract quantity, will prepare the DIC DAC format to suspend the overage quantity until vendor negotiations are resolved.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Materiel Adjustment Cards processed while item is undergoing inventory will be rejected and must be suspended until the inventory is completed.

b. The following actions are required under the circumstances set forth in paragraph 2a or 2d above.

(1) Update of locator file IAW appendix E-071 P.

(2) Preparation of card in format of appendix B-22 with the following specified data fields:

FIELD LEGEND	FIELD POSITION(S)	SOURCE OF ENTRY
DIC		ZAC
Document Number	30-44	Locally assigned.
Contract Line Item	45-50	Enter CLIN when Condition From or To is L.
Supplementary PIIN	51-54	Enter Supplementary PIIN when required (see appendix B-22, note 5).
Condition (To)	66	Enter E.
Date	73-75	Current date furnished by computer.
Condition (From)	76	Present Condition Code.

(3) Upon correction of deficiencies, repeat subparagraph (1) and (2) above except that Condition (To), pos. 66, will be the corrected condition and Condition (From), pos. 76, will be an E, except as in subparagraph (4) below.

(4) If materiel has been reclassified to Condition Code L under provisions of paragraph 2d above, further reclassification will be IAW paragraph 2e above and paragraph 4e below.

c. The following actions are required under the circumstances set forth in paragraph 2b above:

(1) Preparation of DD Form 1225, IAW appendix E-160 P, except that for transfers to Condition Code B, C or D, DD Form 1225 will be prepared only upon request of the DSC/ICP.

(2) Update of locator file IAW appendix E-071 P.

(3) Preparation of card in format of appendix B-22 with the following specified data fields:

FIELD LEGEND	FIELD POSITION(S)	SOURCE OF ENTRY
DIC		ZAC.
Stock Number	8-20	From DD Form 1225.
Type of Pack	22 (if applicable)	From DD Form 1225.
Unit of Issue	23-24	From DD Form 1225.
Quantity	25-29	From DD Form 1225.
Document Number	30-44	From DD Form 1225.
Contract Line Item		From DD Form 1225.
Condition (To)	66	B, C, D, F or G.
Management Code	72	Z, leave blank if pos. 66 is B, C or D.
Date	73-75	Current date furnished by computer.
Condition (From)	76	Present Condition.

(4) Stock will be marked and held pending disposition instructions.

d. The following actions are required under the circumstances set forth in paragraph 2c above.

(1) Preparation of DD Form 1225 IAW appendix E-160 P.

(2) Update locator file IAW appendix E-071 P.

(3) Preparation of a card in format of appendix B-22 with the following specified data fields:

FIELD LEGEND	FIELD POSITION(S)	SOURCE OF ENTRY
DIC		ZAC.
Stock Number	8-20	From DD Form 1225.
Type of Pack	22 (if applicable)	From DD Form 1225.
Unit of Issue	23-24	From DD Form 1225.
Quantity	25-29	From DD Form 1225.
Document Number	30-44	From DD Form 1225.
Contract Line Item		From DD Form 1225.
Condition (To)	66	Enter H.
Management Code	72	Enter M, J, T or E.
Date	73-75	Current date furnished by computer.
Condition (From)	76	Present Condition Code.

(4) Preparation of a Single Line Release/Receipt Document, DD Form 1348-1, to ship the materiel to the PDO. The following entries will be made:

FIELD LEGEND	FIELD POSITION(S)	SOURCE OF ENTRY
DIC		ZAC.
Routing Identifier	4-6	Enter RI of distribution activity.
Stock or Part Number	8-22	Enter NSN or P/N.
Unit of Issue	23-24	Enter applicable UI.
Quantity	25-29	Enter quantity being shipped to PDO.
Document Number	30-43	Enter document number assigned DD Form 1225.
Supplementary Address	45-50	Enter account of PDO.
Signal Code	51	Enter M.

FIELD LEGEND	FIELD POSITION(S)	SOURCE OF ENTRY
Condition Code	73	Enter applicable code.
Unit Price	74-80	Enter Unit Price from block 11, prefix with zeros as required.
Shipped From, Block A		Enter shipper.
Shipped To, Block B		Enter applicable PDO.
Mark For, Block C		Enter DSP.
Project, Block D		Utilize for authority. Enter DLAM 4140.2.

(5) One copy of the DD Form 1348-1 will be attached to the retained copy of the DD Form 1225.

e. The following actions are required under the circumstances set forth in paragraph 2e or 2f above.

(1) Update of locator file IAW appendix E-071 P.

(2) If required by unusual circumstances, submit DD Form 1225 IAW appendix E-160 P.

(3) If required, mark and hold stock while awaiting disposition instructions.

(4) Prepare a card in format of appendix B-22 with DIC ZAC, documenting the change from one condition to the other. If Condition Code From is L, PIIN, CLIN (if provided), and SUPP PIIN (if required) must be entered.

f. The following actions will be required if materiel is to be reclassified as a result of the conditions set forth in paragraph 2g above.

(1) The DSC will prepare the DIC DAC IAW provisions set forth in chapter 5, paragraph 305303 of this volume.

(2) The ZAC generated as a result of the blank Management Code and Condition Coded DIC DAC will be used solely as notification of the DSC action and to enable DS/T to segregate and process locator corrections/updates. Card will not be reentered.

(3) DSC will advise depot of action to be taken via DSC action with Management Code B if stock is to be accepted or via current method if return to vendor is indicated.

(4) If stock is to be accepted under the provisions of Management Code B, ZAC will be input with corrected RICs perpetuating the Management Code B.

g. Selected SICs affecting UI, Shelf-Life Code and stock number changes will be processed to the Classification Suspense File on the effective date contained in the SIC card. These changes will cause an updated Materiel Adjustment Action (DIC ZAC) (or Surveillance Inspection Operational Test Notice, DIC ZCO, if applicable) to be produced.

(1) The DIC ZAC/ZCO card reflecting the new data will be received by the Quality Control Office and matched to the manually suspended Materiel Adjustment Cards.

(2) The new updated DIC ZAC/ZCO will be filed and used when reidentification is to be accomplished.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE FOR RETURNED FORM/REPORT

Action taken in those cases where disposition instructions were requested from the DSC/ICP will be IAW those instructions when received.

6. DISPOSITION OF FORM/REPORTS AFTER FINAL ACTION

Upon completion of keypunching of Materiel Adjustment Cards required by this appendix and processing indicated in appendix D-63, the DD Forms 1487 are transceived to the DSC/ICP managing the materiel under DIC DAC.

APPENDIX E-022 V

MATERIEL ADJUSTMENT CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-22, Materiel Adjustment Card, DIC DAC/ZAC.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-63.

3. PURPOSE, CONTENT AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Materiel Adjustment Cards, DIC DAC/ZAC, which have been rejected from computer processing. The responsible organizational elements are MOWASP Data Control Branch for correction of Violation Reason Code AB and Storage Area Control Branch for correction of other violations. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AB	Invalid "From Routing Identifier".
AC	Invalid "To Routing Identifier".
AF	Invalid Condition Code.
AI	Invalid Document Number.
AN	Invalid Unit of Issue.
AS	Invalid Quantity.
AW	Invalid Management Code.
AY	Invalid Stock Number.
CF	Invalid Action Code.
CK	Invalid Type of Pack.
EX	Invalid supplementary PIIN.
HD	Invalid quantity adjusted.
ML	Unmatched in the file.
Y7	NSN under inventory.

VIOLATION REASON CODE	DEFINITION
AP	Invalid Location Code.
13	Invalid Julian date.
Z9	Action Code incompatible with data fields.

4. PROCESSING/RESEARCH INSTRUCTION

a. VIOLATION REASON CODE AB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the "From Routing Identifier", pos. 67-69, contains other than alpha/numerics.

(2) PROCESSING/RESEARCH REQUIRED:

Annotate the correct RIC of the distribution point below the erroneous "From Routing Identifier", pos. 67-69 in ink or distinctive colored pencil.

b. VIOLATION REASON CODE AC.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the "To Routing Identifier", pos. 4-6, contains other than alpha/numerics.

(2) PROCESSING/RESEARCH REQUIRED:

Obtain from Storage Area Control Branch correct manager data. Annotate the appropriate RIC of the DSC/ICP below the erroneous "To Routing Identifier", pos. 4-6, in ink or distinctive colored pencil.

c. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that:

(a) The "To Condition" Code, pos. 66, is K.

(b) The "To Condition" Code, pos. 66, is not J or L, nor is it as specified in appendix A-16.

(c) The "From Condition" Code, pos. 76, is not as specified in appendix A-16.

(2) PROCESSING/RESEARCH REQUIRED:

In those instances specified in subparagraph (1)(a), (b), and (c) above, obtain from Storage Area Control Branch correct Condition Code and annotate below the erroneous Condition Code field using ink or distinctive colored pencil.

d. VIOLATION REASON CODE AI.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that Document Number field, pos. 30-43, contains blanks or that pos. 44 contains a Suffix Code not IAW appendix A-7.

(2) PROCESSING/RESEARCH REQUIRED:

Correct Document Number/Suffix and annotate the correct Document Number and/or Suffix below the erroneous field using ink or distinctive colored pencil.

e. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that UI, pos. 23-24, contains other than alpha.

(2) PROCESSING/RESEARCH REQUIRED:

Furnish correct UI and annotate the correct UI below the erroneous UI field, pos. 23-24, using ink or distinctive colored pencil.

f. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that Quantity field, pos. 25-29, contains blanks, alphas, or all zeros.

(2) PROCESSING/RESEARCH REQUIRED:

Furnish correct Quantity and annotate the correct Quantity below the erroneous Quantity field, pos. 25-29, using ink or distinctive colored pencil.

g. VIOLATION REASON CODE AW.

(1) REASON FOR VIOLATION/ERROR CONDITION:

(a) Indicates that data in pos. 72 of the ZAC, Material Adjustment Card, is invalid, i.e., H in pos. 66 requires M, J, T or E in pos. 72.

(b) Indicates pos. 72 of DAC contains other than blank or Management Code B.

(2) PROCESSING/RESEARCH REQUIRED:

Research the adjustment documents and records to determine the correct Management Code.

h. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that NSN field, pos. 8-20, contains blanks, alphas (other than A, B, J, L, or S), or all zeros.

(2) PROCESSING/RESEARCH REQUIRED:

Obtain from Storage Area Control Branch correct stock number and annotate the correct stock number below the erroneous NSN field, pos. 8-20, using ink or distinctive colored pencil.

i. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the Action Code for the process, pos. 79-80, is in error.

(2) PROCESSING/RESEARCH REQUIRED:

Check input image on F-85 report. Obtain appropriate Action Code to be utilized in appendix A-42.

j. VIOLATION REASON CODE CK.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that Type of Pack, pos. 22, is other than 1, 2, 3, 4, or blank.

(2) PROCESSING/RESEARCH REQUIRED:

Obtain from Storage Area Control Branch the correct Type of Pack and annotate the correct Type of Pack below the erroneous Type of Pack field, pos. 22, using ink or distinctive colored pencil.

k. VIOLATION REASON CODE EX.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates an A or D was present in pos. 38 of Document Number field, but no Supplementary PIIN was entered.

(2) PROCESSING/RESEARCH REQUIRED:

Obtain from Storage Area Control Branch the correct Supplementary PIIN and annotate the correct Supplementary PIIN below the erroneous Supplementary PIIN field, pos. 51-54 of DIC ZAC, using ink or distinctive colored pencil.

l. VIOLATION REASON CODE HD.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the quantity in the input transaction is greater than the quantity remaining to be cleared from the suspense file.

(2) PROCESSING/RESEARCH REQUIRED:

(a) At the time the Violation Printout, appendix F-85, is received, the Materiel Adjustment Card, appendix B-22, will have been sent to the DSC containing the quantity in the record, and the record will have been cleared from the Classification Suspense File.

(b) Corrective notice to the DSC may or may not be necessary.

(c) To determine whether or not corrective action is necessary, the Storage Area Control Branch should:

1. Review the Classification Suspense Report, appendix F-22 to determine the quantity which had been suspended.

2. If the quantity has not been in suspense for 10 days and does not appear on the Classification Suspense Report, appendix F-22, an inquiry into PMR and Completed Receipts Files, appendix B-61, should be prepared IAW appendix E-061 P.

3. Based upon the information obtained from the above procedures, research of the source documents should be conducted and the DSC should be notified of the correct quantity if the quantity in the record has proven to be incorrect.

4. Should Violation Reason Code HD be the only code to appear on the Violation Printout, appendix F-85, for a particular transaction, that transaction will be lined out and is not to be reentered.

m. VIOLATION REASON CODE ML.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the Contract Line Item Number pos. 45-50, stock number, pos. 8-20, and/or the document number, pos. 30-44, in the input transaction does not match the stock number and/or document number in the suspense file.

(2) PROCESSING/RESEARCH REQUIRED:

Furnish the correct stock number and/or document number, and annotate the correct stock number and/or document number below the applicable erroneous field using ink or distinctive colored pencil.

n. VIOLATION REASON CODE Y7.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates NSN entered in pos. 8-20 was undergoing inventory action at time of classification.

(2) PROCESSING/RESEARCH REQUIRED:

Inquire locator via B inquiry or contact inventory function and resubmit when NSN inventory action is complete or canceled.

o. VIOLATION REASON CODE AP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates the location entered in pos. 60-71 is invalid. If a 9 position location - field position 60 must be alpha, pos. 61-66 must be numeric, pos. 67 must be alpha, pos. 68 may be alpha/numeric, and pos. 69-71 is blank. If 12 positions - pos. 60 must be alpha and 61-71 is numeric.

(2) PROCESSING/RESEARCH REQUIRED:

Annotate corrected location data and reenter.

p. VIOLATION REASON CODE 13.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the date in pos. 73-75 is other than numeric, greater than 0 and less than 367.

(2) PROCESSING/RESEARCH REQUIRED:

Annotate correct day and reenter.

q. VIOLATION REASON CODE Z9.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that input is action coded RB in pos. 79-80 and pos. 60-65 are blank.

(2) PROCESSING/RESEARCH REQUIRED:

Determine action required and correct either action coding or enter necessary location or Julian date to match action coding.

5. REENTRY INSTRUCTIONS

Forward annotated Violation Printout, appendix F-85, for keypunching of corrected transaction and reentry into the applicable process ensuring that transactions which have been lined out are not reentered.

APPENDIX E-023 P

LOCATOR REPORT BY DATE OF PACK REQUEST

1. FORM/REPORT USED

Local coding sheet.

2. REASON/CRITERIA FOR PREPARATION

To extract locator data/subrecords from the MOWASP locator. The report will be used to identify locations within Date of Pack parameters. The primary purpose of the report is to identify location with old Date of Pack for inspection for condition and disposition.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Quality Control and Surveillance Inspection Branch, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Preparation of the local form is outlined in appendix B-85 utilizing appropriate Type Sequence Code, Management Code, and Date of Pack parameters to produce the report.

b. Prepare/Complete a local coding sheet utilizing the format outlined in appendix B-85.

5. DISTRIBUTION OF FORM

Local coding sheet will be forwarded via keypunch services to Office of Data Systems.

6. DISPOSITION OF FORM

Local coding sheets will be returned to Surveillance Inspection Branch, Directorate of Storage and Transportation, and retained for two days to be utilized in processing any violations resulting from processing this input.

APPENDIX E-023 V

LOCATOR REPORT BY DATE OF PACK REQUEST VIOLATION

1. INPUT DOCUMENT

Local coding sheet in format of Appendix B-85.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-3.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction and reentry of the Locator Report by Date of Pack Request which has been rejected from computer processing. The responsible organization is the Surveillance Inspection Branch, Directorate of Storage and Transportation, and/or organization designated by the FRC on the F-85 printout. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
19	Type Sequence Code invalid.
HH	Low and/or High Date of Pack parameters invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE 19.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Type Sequence Code is other than 1, 2, 3, 4 or 5.

(2) PROCESSING/RESEARCH REQUIRED:

Resubmit local coding sheet prepared per appendix B-85.

b. VIOLATION REASON CODE HH.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Low and/or High Date of Pack parameters invalid. The Date of Pack was not a two-digit numeric month greater than 00 or less than 13 or a two-digit numeric year.

(2) PROCESSING/RESEARCH REQUIRED:

Review the F-85 violation printout to determine error involved. Reenter correct date(s) per appendix B-85.

5. REENTRY INSTRUCTIONS

Using appendix F-85 violation printout as the basis accomplish the following:

a. When correct data has been determined, annotate correction directly below erroneous entry using ink or a distinctive colored pencil.

b. Forward annotated violation printout to Office of Data Systems via keypunch services for entry into applicable process.

APPENDIX E-024 P

LOCATOR/DEPOT BALANCE & TRANSPORTATION REGISTER (DB&TR) RECONCILIATION ANALYSIS LISTING

1. PURPOSE

This procedure describes the method used to research disagreements between the DB&TR Balance File and the Depot Locator File. The mismatches appear on the F-131, parts 1 and 3, listings. The procedure also describes the method used to clear the diagreements.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 72.

b. Appendix A-32.

c. Appendix A-42.

c. Appendix B-26.

e. Appendix B-61.

f. Appendix B-62.

g. Appendix B-90.

h. Appendix B-96.

i. Appendix B-107.

j. Appendix B-114.

k. Appendix B-115.

l. Appendix C-33.

m. Appendix C-104.

n. Appendix D-175.

o. Appendix E-163 P.

p. Appendix E-184 P.

q. Appendix F-29.

r. Appendix F-67.

s. Appendix F-131.

t. Appendix F-145.

u. Appendix F-146.

v. Appendix F-147.

w. Appendix F-148.

3. RESPONSIBILE ORGANIZATIONAL ELEMENT

Inventory Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Review the F-131, part 1 and F-145, part 5.

(1) If the dollar value of the balance record on the F-145, part 5 (i.e., the on-hand quantity of the balance record multiplied by the unit price) is less than $10.00, no research of the location will be made; neither will an inventory be conducted. Desk research (see steps below) will be accomplished. If the reason for the discrepancy can be found through this research, corrective action will be taken as necessary (i.e., correct the depot locator file or the DB&TR records).

(2) Research the F-146, part 1, to find out if the NSN was mismatched during the last DB&TR reconciliation with the DSC. If the record is not found on the F-146, part 1, continue research as outlined below. If the record is found on the F-146, part 1, determine if the mismatch is in the process of being corrected (i.e., is a DLA Form 1301 in suspense or is local processing underway).

(a) If the record on the F-146, part 1, is in the process of being corrected, disregard the record on the F-131, part 1 and F-145, part 5.

(b) If the record on the F-146, part 1, is not being processed, take action to start processing immediately and disregard the record on the F-131, part 1 and F-145, part 5.

(3) Forward a copy of the F-145, part 5, to Quality Control Office for research of discrepancies with Condition Codes other than A, B or C. Quality Control Office will determine if there is any action in-process against the NSN on materiel in a condition other than A, B or C. If no action is in process, follow subparagraph (4)(c) below.

(4) Review discrepancies coming from locator update actions resulting in a first locator add determined by DIC ZEJ, appendix B-114, and Action Code KA, appendix A-42.

(a) Inquire the depot locator by following the steps in appendix E-163 P.

1. If there are locations for the Condition Code other than the newly established location on the locator, disregard the discrepancy.

2. If there are no locations for Condition Codes other than the discrepancy:

a. Investigate the possibility of an in-process DIC DAC transaction. If found, follow steps in para. 4a(4)(c) below.

b. Investigate the possibility of rewarehousing actions inprocess. Look for instances where DIC ZBA is used for rewarehousing transactions in lieu of DIC ZUN.

(b) There are two different sets of circumstances associated with Action Code KA problems.

1. If a DIC ZEJ with Action Code KA appears on the F-145, part 5, but no other transaction is present which affects the DB&TR balance and the balance is zero, physically survey the location. Use the F-131, part 4, to physically survey the location.

a. If there is materiel in the location and it matches the NSN and Condition Code, contact Receiving Division and/or inquire the Completed Receipts History File (appendix B-61, DIC ZB0/ZB1) for appendix F-29. If a receipt is found to be inprocess or it is a recent new receipt, disregard the discrepancy.

b. If no materiel is found in the location, search the immediate area for a new receipt or materiel with the same NSN and Condition Code. If materiel is found in the area, follow steps in subparagraph a above. Take action to delete the location with no stock and add the correct location. If no materiel is found, delete the location.

c. Continue to process by following steps below.

2. If DIC ZEJ with Action Code KA appears on the F-145, part 5, and the on-hand quantity reflects a previous balance, follow steps in subparagraph (4)(a) above.

(c) When all steps above have been followed and the discrepancy has not yet been cleared, initiate an inventory by input of DIC ZJA, appendix B-26. See note 1 below.

(5) Review the discrepancies which come from the locator update actions and result in a last locator delete (determined by DIC ZEJ with Action Code KB).

(a) Look for denial action in process on the F-145, part 5. If a DIC A6_ is present, disregard the discrepancy.

(b) Look for DIC DAC on the F-145, part 5.

1. If a DIC DAC is found, contact Quality Control Office to determine if the materiel may be infloat between locations. If this is the case, disregard the discrepancy.

2. If no DAC is found, continue to research the discrepancy.

(c) Inquire the depot locator (Appendix E-163 P).

1. If there is a location for other conditions:

a. Look for an infloat DIC DAC. Follow steps in subparagraph (5)(b) above.

b. Look for the possibility of a rewarehousing action. If there is a rewarehousing action, disregard the discrepancy. (Warehousing personnel may have used a DIC ZBA instead of a DIC ZUN.)

2. Continue to process the discrepancy.

(d) Initiate DIC ZB0/ZB1, appendix B-61, inquiry to the Completed Receipt History File to determine if receipt has recently processed. Contact Receiving Division for original receipt/stow document to obtain location where new receipt was stowed.

1. Physically survey the location found on the receipt/stow document or from the F-131, part 4. If materiel is found, take action to establish location and discontinue further research. If materiel is not found in location indicated on the receipt/stow document, search the area for a location with the new receipt or materiel with the same NSN and Condition Code. If materiel is found take action to establish the location which was found. Discontinue further research.

2. If materiel is not found, continue research process described below.

(e) If all research above fails to reveal the cause for the discrepancy, initiate an inventory by input of a DIC ZJA card received with F-131, part 1, and F-145, part 5. See notes 1 and 2 below.

(6) Review Manager, NSN, and Unit of Issue discrepancies indicated on the F-131, part 1, and F-145, part 5. The F-145, part 5, discrepancies are identified by DIC ZEJ, Action Code KC.

(a) Verify with Quality Control Office to determine the correct Manager, NSN, and/or Unit of Issue.

(b) Physically survey the location to check the NSN, Manager, and Unit of Issue on the materiel and on the Storage Location Identification Label (appendix C-104).

(c) Make corrections to the locator, location label, materiel, and/or DB&TR records, as necessary.

(7) When transactions processing to the DB&TR Subsystem cause the DB&TR balance record to go to zero, the record will be flagged to indicate that the last location on the depot locator file should be deleted. When ten or more days have elapsed since the flag was placed on the DB&TR record and a last locator delete transaction (DIC ZEJ, Action Code KB) has not processed, either a receipt has processed or an error condition exists. The 10 or more day delay is allowed to permit all MROs for that NSN, Condition Code, and type pack to be picked and locations deleted, if necessary. If the event a receipt does process during the 10 or more day wait, a last locator delete will not be forthcoming and the system will recognize that no error condition should be identified on the F-131, part 1. When a disagreement between the DB&TR and the depot locator exists resulting from the above process, a F-131, part 1 will be produced with its accompanying F-145, part 5 and DIC ZJA card. Normal research processing as outlined in this procedure, will be followed to bring the DB&TR balance file and the depot locator records into agreement.

b. Review the F-131, part 3. The F-131, part 3 listing is prepared on an as required basis. It reveals all discrepancies between the DB&TR Balance File and the depot locator. This listing should be run two or three times a year as a check to ensure the DB&TR and the locator keep in agreement. It is created by the Office of Data Systems by running program UWMB75.

(1) Separate the Condition Code A, B and C records from the other Condition Code records.

(a) Forward the Condition Code records other than A, B and C, to Quality Control Office for review to determine those stock numbers which should be inventoried.

(b) Receive from Quality Control Office the F-131, part 3, with the Condition Code records other than A, B and C and instructions on which NSNs require inventory.

(c) Initiate an inventory for those NSNs so indicated by input of a DIC ZJA received with the F-131, part 3, from Office of Data System. Disregard the other records. See notes 1 and 2 below.

(2) Immediately initiate an inventory for those records with Management Code A. These records indicate a positive quantity balance on the DB&TR File but no depot location. See notes 1 and 2 below.

(3) Physically survey the location for Management Code B records.

(a) If no stock is found in the location, take action to delete the vacant location from the locator.

(b) If stock is found in the location, contact Data Systems to prepare the F-145, part 3, for either all NSNs or a parameter of NSNs which appear on the F-131, part 3. The F-145 should be prepared five days following the date on the F-131, part 3. If transactions were infloat for the discrepant NSN which have now processed and explained the discrepancy, disregard the discrepancy. This allows for documents infloat to process to the DB&TR. The F-145 is created by the Office of Data Systems by running program UWMB80.

(c) Initiate an inventory for all other NSNs with Management Code B appearing on the F-131, part 3. See note 1 below.

5. FLOW CHART

Flow chart not required.

NOTE 1: Input of DIC ZJA with Type Inventory Code C and Management Code A or B will automatically establish the inventory cutoff day six days from the current day.

NOTE 2: Input of DIC ZJA with Type Inventory Code C and Management Code A will automatically cause any MRO in the MRO Bank with NSN and condition the same as the ZJA to be denied. In-depth research must be conducted to ensure there is no stock at the depot for the NSN and condition to input of the ZJA because of the automatic denial feature.

APPENDIX E-025 P

PHYSICAL INVENTORY COUNT CARDS

1. INPUT DOCUMENT

Appendix B-25, Physical Inventory Count Card, DIC ZKA.

2. CRITERIA FOR PREPARATION

This card will be computer prepared, on the inventory cutoff date, for each location to be inventoried based upon items flagged in the locator by cutoff date.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office.

4. DISTRIBUTION OF CARDS

Inventory Office will receive Inventory Count Cards from Data Processing Element by the BOB on the day after cutoff date.

5. PROCEDURE FOR PROCESSING COUNT CARDS

a. Inventory Office will distribute count cards from batch 2 to Quantity Control Office, other count cards will be distributed to count teams. Count teams storage for occupied locations for hazardous area locations will be rotated in a regular manner to allow an equal distribution of work in hazardous areas.

b. Inventory team leaders will:

(1) Account for team member at all times, receive and distribute count cards to team members daily.

(2) Periodically collect or direct counters to drop count cards at designated locations. Timely collection and delivery of count cards for input is the responsibility of the team leaders.

(3) Count a minimum of 50 percent of time.

(4) Perform quality check on each member of their team.

(5) Attempt to resolve problems of NSN, UI, and Condition Code differences, and improper stowing of stock with responsible warehouseman. Problems which cannot be resolved will be documented and forwarded to the Inventory Office.

(6) Ensure that count cards in Batch 3 are counted first, and count cards returned as soon as possible.

c. Counters will:

(1) Receive count cards from team leader and proceed to respective locations.

(2) Prior to count of stock, search immediate area around location to ensure all stock will be included in count. Stock which spans several contiguous locations will be handled as follows:

(a) Count all stock in all location and enter locations in the remarks block of count card.

(b) If more than one count card was prepared, notify team leader and warehouseman of the stock which spans several contiguous locations and request that review be made of the storage location and decision made to continue present storage practices or reduce the number of multiple locations.

(c) Ensure that NSN, UI, Location, Condition and Type Pack are same as listed on computer prepared count card. Any disagreement of these elements will require a "zero" balance to be entered in the quantity block of prepared count card.

(3) Perform physical count of materiel in designated location. Verify stock number, location, UI, Condition, and Type Pack Code if subsistence item. Circle the UI and Condition Code on the count card to indicate match of data.

(4) Enter count figures in remarks block of count card.

(a) Figures will reflect number of pallet, number of packages on pallet, quantity per package, and UI. Do not extend mathematical computations. Example: 27 PT and 50 CT@10 each or 10 BX@5 each and 5 CT@50 each.

(b) Loose stock will be written as the intermediate pack and quantity. Example: 1CT@27 each.

(c) Scale counts will be indicated beneath the quantity counted. Example: 1050 each scale weight.

(5) Affix pink tape on left edge of stock label when first count completed, green tape when second count completed, and yellow tape when third count completed. Enter three digit count date on above colored tape as applicable.

(6) Any pertinent information as to how the count was arrived at will be entered in the remarks column or on the rear of the count card. This could include locations with "DO NOT INVENTORY" placards. Count so placard can be shown on the reverse side of the count card.

(7) Initial count card in block E and enter count day in block F. Turn completed count cards over to team leader or place in designated collection locations.

(8) Problems which cannot be resolved by a counter in a reasonable time (20 minutes) will be passed to the team leader for assistance.

(9) All Condition Codes of stock will be counted except Condition Codes H and K. If these count card conditions are found, enter information in remarks column of count card and return to team leader.

(10) Mismatched data elements of the count card will be annotated as follows and expedited to the team leader for appropriate action.

(a) If a stock number discrepancy exists, leave the count blank. If a stock number change is apparent, the new stock number and quantity will be annotated in the remarks column of the count card.

(b) If a Condition Code discrepancy exists or is suspected, leave quantity field blank, annotate discrepancy in the remarks column of the count card.

(c) If a unit of issue discrepancy exists, the count card quantity will be blank. Annotate different units of issue and associated quantities in the remarks column.

d. Inventory Monitor will:

(1) Review all count cards returned to Inventory Office to ensure the necessary data are displayed on face of cards prior to being input via the teleprocessing system (appendix E-190 P).

(2) Determine those cards to be processed by the batch system.

(3) Ensure that cards are keypunched and forwarded to Data Systems each day in time to be processed in that day's update.

APPENDIX E-025 V

PHYSICAL INVENTORY COUNT CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-25, Physical Inventory Count Card (DD For 1485) DIC ZKA.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-10.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Physical Inventory Count Cards which have been rejected from computer processing. The responsible organization is the Inventory Office. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Invalid or blank Condition Code.
AN	Invalid Unit or Issue Code.
AP	Warehouse Locations Invalid.
AS	Invalid quantity.
AW	Invalid Management Code.
AY	Invalid NSN.
BQ	Invalid inventory cutoff date.
CK	Invalid or missing type pack.
EK	Invalid or blank Physical Inventory Code.
IM	Date of count invalid or blank.
UV	Invalid serial number not matched to file.
VT	Invalid Lot Number Invalid or Blank (Sample Only).
WN	Duplicate Count Card.

4. RESEARCH INSTRUCTIONS

a. Review Violation Printout, F-85, to determine errors. An asterisk will appear under each card column of the input image which is to be corrected.

b. Review inventory schedules, copies of input documents, and/or stocks in location to enable correction of the violation.

c. If VRC is UV, research should be made to determine if ZKA input was a duplicate or if serial number was incorrect. VRC UV occurs when ZKA doesn't match the suspense file and is not an add.

5. REENTRY INSTRUCTIONS

a. When the correct codes have been determined, annotate the correction directly below the erroneous or blank code field using ink or a colored pencil.

b. Forward the annotated Violation Printout, appendix F-85, to keypunch.

c. Keypunch will punch a new Physical Inventory Count Card, DIC ZKA, utilizing data on the F-85 and forward to Office of Data Systems for reentry into the computer; return the F-85 to Inventory Office.

APPENDIX E-026 V

PHYSICAL INVENTORY REQUEST CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-26, Special and Spot Inventory Request Card, (DD Form 1485) DIC DJA.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-12.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Physical Inventory Request Cards which have been rejected from computer processing. The Physical Inventory Branch is responsible for the correction of errors and reentry of the card as required. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AC	Routing Identifier (To) invalid or blank.
AF	Condition Code invalid or blank.
AN	Unit of Issue invalid.
AW	Management Code invalid or blank.
AY	NSN invalid.
BQ	Inventory cutoff date invalid.
CK	Type Pack Code invalid or blank.
EK	Type of Inventory Code invalid.
QA	Stock number not DSC managed.
RH	Request date invalid or blank.

4. PROCESSING/RESEARCH INSTRUCTIONS

For all Special Inventory Requests originated from the DSCs, the inventory monitor at the DSC indicated in pos. 67-69 of the F-85 will be contacted and informed of the reject received. When VRC QA is present, it indicates the DJA is an inventory request from a non-DLA manager. The Inventory Control Office will extract the necessary data from the F-85 report to perform an inventory as requested. Manual procedures must be used, including use of Locator Inquiry programs, manual production of count cards, and manual preparation of DKA summarized counts to be transceived to the Service ICP.

APPENDIX E-027 P

PHYSICAL INVENTORY PERFORMANCE (RCS DD-M(Q)935)

1. FORM/REPORTS USED

DLA Form 1377, Report of Inventory Control Effectiveness, and a Narrative Evaluation Report of Inventory and Reconciliation Performance.

2. REASON/CRITERIA FOR PREPARATION

The reports cited in paragraph 1 above, are submitted quarterly. DLA Form 1377 will be submitted as an enclosure to the narrative report, which highlights areas of unsatisfactory performance, contributing circumstances and conditions, and appropriate corrective actions initiated. Narratives will include an analysis related to all confirmed shortages of Inventory Category Code U items.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Control Office, DS/T.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORTS

a. Source(s) of Information.

The Report of Inventory Control Effectiveness is prepared from information taken from the F-110 report.

b. Preparation of Form/Report.

Complete DLA Form 1377, part I. In addition, a narrative evaluation report will accompany the DLA Form 1377.

c. Distribution of Report.

Copies of the report will be distributed as follows:

(1) One copy to HQ DLA, ATTN: DLA-OS.

(2) One copy to HQ DLA, ATTN: DLA-OW.

(3) One copy retained by Inventory Control Office.

APPENDIX E-028 P

LOCATOR RECONCILIATION EXCEPTION CARD LIST (FOR OTHER THAN DLA ACTIVITIES)

1. PURPOSE

This procedure describes the use of and the actions taken upon receipt of subject listing, appendix F-124. Listing is furnished daily upon receipt of Locator Reconciliation Exception Cards (DIC CKB, CKC, CKD) from the DSC/ICP that have processed to the MOWASP System.

2. APPENDICES USED

a. Appendix B-81

b. Appendix B-89

c. Appendix F-37

d. Appendix F-124

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

MOWASP Data Control Branch, Management Support Office, Directorate of Storage and Transportation.

4. PROCEDURES

a. MOWASP Data Control Branch receives the Locator Reconciliation Exception Card List, appendix F-124, with DIC CKB appearing on the listing. This indicates that the NSN submitted by the Directorate of Storage and Transportation to the DSC/ICP has been reidentified to another NSN by a catalog change. The processing of the CKB card has not updated the locator record. The following actions are now necessary:

(1) Process an Item Locator Inquiry Card, appendix B-79, DIC ZBJ, with Action Code FE. This action will cause the printout of appendix F-37, Locator Record Printout, furnishing all locations for that NSN.

(2) Forward appendix F-37 to Stock Readiness Branch requesting that stock be remarked, as necessary, and that listing be annotated to indicate actions taken.

(3) Receive annotated appendix F-37 from Stock Readiness Branch.

(4) For each location in which stock has been remarked, prepare an Item Locator Subrecord Deletion Card, appendix B-71 utilizing Action Code FY. The NSN to be entered in pos. 8-20 will be the NSN that appears under "Former NSN" on the Locator Reconciliation Exception Card Listing, appendix F-124. This action will delete the location.

(5) For each location in which stock has been remarked, prepare an Item Locator Subrecord Addition Card, appendix B-71 utilizing Action Code FX. The NSN to be entered in pos. 8-20 will be the NSN that appears under "NSN" on the Locator Reconciliation Exception Card Listing, appendix F-124. This action will establish the location under the new NSN.

(6) Cards prepared in above actions will be forwarded through keypunch operation to Data Processing Element.

(7) Review appendix F-124 and perform research in an effort to ascertain reasons for the nonprocessing of catalog changes to the Locator File.

(8) Take necessary action to assure that future catalog changes are properly processed.

b. Stock Readiness Branch receives the Locator Record Printout, appendix F-37 and takes the following actions:

(1) Proceed to each location shown on appendix F-37 and remark stock with correct NSN as necessary.

(2) Annotate appendix F-37 to indicate action taken.

(3) Forward annotated appendix F-37 to MOWASP Data Control Branch.

c. MOWASP Data Control Branch receives the Locator Reconciliation Exception Card List, appendix F-124, with DIC CKC appearing on the listing. This indicates that the unit of issue contained on the locator file for that NSN before the reconciliation was not in agreement with the DSC/ICP records. The processing of the CKC card has already posted the correct unit of issue to the locator record as it appears on the listing. Take actions as outlined in subparagraphs a(1), (2), (3), (7), and (8) above.

d. Stock Readiness Branch receives the Locator Record Printout, appendix F-37, and takes the following actions:

(1) Proceed to all locations shown on appendix F-37 and remark stock with correct unit of issue, as necessary, as it appears on appendix F-37.

(2) Annotate appendix F-37 to indicate action taken.

(3) Forward annotated appendix F-37 to MOWASP Data Control Branch.

e. MOWASP Data Control Branch receives the Locator Reconciliation Exception Card List, appendix F-124, with DIC CKD appearing on the listing. This indicates that an NSN is recorded on the locator file that cannot be identified by the DSC/ICP records. The following actions are now necessary:

(1) Process an Item Locator Inquiry Card as outlined in subparagraph a(1) above.

(2) Forward appendix F-37 to Stock Readiness Branch requesting that stock be identified and remarked as necessary and that listing be annotated to indicate actions taken.

(3) Receive annotated appendix F-37 from Stock Readiness Branch.

(4) If annotation indicates that the NSN in store agrees with the NSN listed on appendix F-37, it would mean that the original Locator Reconciliation Card was forwarded to the wrong DSC/ICP. In this case, it indicates that the locator file contains the wrong commodity manager for that NSN. Take the following actions:

(a) Conduct research to determine the correct commodity manager.

(b) Prepare an Item Locator Record Card in the format of appendix B-73 inserting the correct Commodity Manager Code in pos. 76. This action will place the correct code in the Locator File.

(c) Process card through keypunch to Data Processing Element.

(5) If annotation indicates the item in store carries the correct NSN and the NSN appearing on appendix F-124 is wrong, take the following actions:

(a) Delete the Stock Number appearing on the F-124 by preparing an Item Locator Subrecord Deletion Card in the format of appendix B-71, inserting Action Code FY in pos. 79-80. This action will delete the incorrect Stock Number from the locator record.

(b) Add the correct Stock Number to the locator record by preparing Item Locator Subrecord Addition Card in the format of appendix B-71, inserting Action Code FX in pos. 79-80.

(c) Process above cards through keypunch to the Data Processing Element.

f. Stock Readiness Branch receives appendix F-37 and takes the following actions.

(1) Proceed to each location shown on appendix F-37. Identify and remark stock as necessary.

(2) Annotate appendix F-37 to indicate action taken.

(3) Forward annotated appendix F-37 to MOWASP Data Control Branch.

APPENDIX E-028 V

LOCATOR RECONCILIATION EXCEPTION CARD VIOLATIONS (FOR OTHER THAN DLA ACTIVITIES)

1. INPUT DOCUMENT

Appendix B-28, Locator Reconciliation Exception Card Entries, DICs, CKB, CKC, and CKD.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-13

3. PURPOSE CONTENTS AND RESPONSIBILITIES

This appendix provides instructions in reconciling locator discrepancies and remarking of stocks. The Responsible Organization is the MOWASP Data Control Branch, Management Support Office, Directorate of Storage and Transportation. Reasons for discrepancies are as follows:

VIOLATION REASON CODE	DEFINITION
AC	Routing Identifier (TO) invalid or blank.
AY	NSN invalid.
AN	Unit of Issue invalid.
AB	Routing Identifier (From) invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AC.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AC indicates that the Routing Identifier Code (To) in pos. 4-6 of the input document was invalid or blank.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Reviews the Violation Printout, F-85. If the Routing Identifier Code, pos. 4-6 is valid for another distribution activity, keypunch new card and pass to proper activity.

(b) If Routing Identifier Code cannot be recognized, advise the DSC (pos. 67-69) of entries in pos. 4-6 and request further instructions.

(c) No action is required to clear violations from the computer as violation is not held in suspense.

b. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AY indicates that the National Stock Number (NSN) is invalid in pos. 8-20 of the input document.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Reviews the Violation Printout, F-85, to determine errors.

(b) Note date (pos. 36-39) and reconciliation card number (pos. 60-66).

(c) Relay information to Inventory Monitor at the DSC and request further instructions.

(d) No action is required to clear violation from the computer as violation is not held in suspense.

c. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AN indicates that data in pos. 23-24 of the input document was other than an authorized Unit of Issue Code as defined in appendix A-48.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Reviews the Violation Printout, F-85, to determine errors.

(b) Checks catalog data records to ascertain proper Unit of Issue for NSN contained in pos. 8-20.

d. VIOLATION REASON CODE AB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Violation Reason Code AB indicates that data in pos. 67-69 of the input document was an invalid Routing Identifier (From).

(2) PROCESSING/RESEARCH REQUIRED:

(a) Reviews the Violation Printout, F-85, to determine errors.

(b) Review DLAM 4140.5, Item Management Coding Manual, to determine which center has the management responsibility for the NSN.

5. REENTRY INSTRUCTION

When the correct codes have been determined, annotate the correction directly below the erroneous code field using ink or a colored pencil. Forward the annotated Violation Printout, appendix F-85, to the Data Processing Element via keypunch services, for reentry into the applicable process.

APPENDIX E-029 P

MAINTAINING TRANSACTION RECORD OF SENSITIVE ITEMS/CONTROLLED SUBSTANCES (DLA FORM 539)

1. FORM USED

Appendix C-77, Transaction Record of Sensitive Items, DLA Form 539

2. REASON FOR PREPARATION

A Transaction Record of Sensitive Items (DLA Form 539) is maintained to keep a running record of receipts, issues, and inventory actions on each FSN classified as a sensitive item, drug abuse control item, controlled substance, alcohol and alchoholic beverages.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Area Control Branch, Warehousing Division

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Sources of Information

The DLA Form 539 is prepared from information obtained from: Materiel Inspection and Receiving Report (DD Form 250); DoD Single Line Item Release/Receipt Document (DD Form 1348-1); regulations, letters, or directives.

b. Preparation of Form

Complete DLA Form 539 as follows:

TITLE	COLUMN	INSTRUCTIONS
Stock Number		Enter the Stock Number.
Description		Enter the noun and other pertinent descriptive information.
Unit of Issue		Enter the current Unit of Issue abbreviation, appendix A-48.
Card Number		Enter the Card Number. Both sides of the card shall contain the same number. Numbers shall be assigned consecutively starting at one when the FSN is first recorded in stock.
Julian Date	(1)	Enter the last digit of calendar year followed by Julian day the transaction is recorded.

TITLE	COLUMN	INSTRUCTIONS
Transaction	(2)	List the document number of DD Form 1348-1, DD Form 250, or other document. The word "Inventory" will be used in lieu of document number to identify inventory actions.
Quantity Received	(3)	Enter Quantity Received for stock.
Quantity Issued	(4)	Enter Quantity Issued from stock.
Adjustments	(5)	Enter any Adjustments that are a result of inventory actions.
Balance	(6)	Enter the new Balance after the subtraction/addition of receipt, issue, or adjustment. All inventory actions will record a balance even though it agrees with current balance.
Initials	(7)	The person taking the inventory shall place their initials in this column.
Remarks/Authority	(8)	Enter pertinent information such as authority for inventory, issued to destruction board, received from disassembly, etc.
Balance Forward from Card No. ___		Enter number of previous card for the first side and use the current card number when completing reverse side.
Balance Carried Forward		Repeat the figure recorded on the previous balance.
Stock Number		Enter the Stock Number in the lower location only if Cardex type insert is not used and identification is required along the bottom edge.

5. DISPOSITION OF FORM AFTER FINAL ACTION

DLA Form 539 will be retained for three years after completion of the last line on the card.

APPENDIX E-030 P

SUPPLY SYSTEMS QUALITY ANALYSIS REPORT (DLA FORM 432)

1. PURPOSE

DLA Form 432 is used to record results of Quality Control checks made in accordance with chapter 10 of this volume. It is also used to record the corrective action taken on the discrepancies reported.

2. RESPONSIBLE ORGANIZATIONS

a. The Quality Control Office is responsible for preparation of that portion of the report which records the results of the Quality Control check.

b. The Supervisor responsible for the element being checked is responsible for that portion of the report which records the corrective action.

3. INSTRUCTIONS FOR PREPARATION

a. Plan: Enter the title of the element being checked as stated in paragraphs 310109 and 310201 through 310407, chapter 10 of this volume.

b. Area: Enter the location where the check is being made.

c. Sample Size: Enter the appropriate sample size from the table in appendix C-28.

d. AQR: Enter the appropriate acceptable quality rate from paragraphs 310109 and 310201 through 310407, chapter 10 of this volume.

e. Document Number: Enter the document or other appropriate number for the errors detected.

f. Error Characteristics: Enter the appropriate error characteristics from paragraphs 310109 and 310201 through 310407, chapter 10 of this volume.

g. Nondiscrepant Tally: Enter the total number of items checked where no errors were detected.

h. Name of Quality Control Specialist: Name of Quality Control Specialist making the check.

i. Date: Date check was made.

j. Copy Furnished: Enter the name of Supervisor who received the completed form.

k. Corrective Action: Supervisor of the area checked will enter the corrective action taken and the names of the persons involved.

1. Signatures: The Supervisor and the Division Chief will sign in the spaces indicated and return the form as indicated in paragraph 310107e(4), chapter 10 of this volume.

4. DISTRIBUTION

a. Two copies of all reports to the Supervisor of the area checked.

b. Additional copies based on depot requirements may be prepared to ensure that all levels of management concerned receive timely copies to enable corrective action to be taken.

5. DISPOSITION

DLA Form 432 (Discrepant and Nondiscrepant) will be filed and maintained for a minimum of one year.

APPENDIX E-031 P

PROCESSING SECOND MATERIEL RECEIPT FOLLOWUP

1. PURPOSE

To establish a method for processing second materiel receipt followup inquiries received from the DSCs. These followups are generated as a result of dues in which have been reported as being shipped but not received within the established suspense period (55 days).

2. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Receipt Document Branch, Receiving Division.

3. BACKGROUND

SAMMS automatically creates receipt followup cards, DICs, DXA and DXB, 45 days after materiel has been reported as being shipped, but there is no evidence of receipt. These cards are mechanically processed in MOWASP and if the followup is matched to the completed receipt file, a Materiel Receipt Card, DIC D4_ or D6_, is automatically sent to the DSC. If there is no matching receipt transaction in process, a DIC DXC or DXD card is automatically generated by the depot and sent to the DSC. When materiel still has not been received 55 days after it was reportedly shipped, SAMMS creates an internal DIC ZDX listing for the DSCs which is researched first at the DSC and then subsequently used to create second materiel receipt followup inquiries to the depots. Depots may receive these inquiries by message, by letter and in some cases the ZDX listing, or portions thereof, may be forwarded.

4. Document Branch, Receiving Division, will take the following action to research Second Materiel Receipt Followup Inquiries received from the DSCs.

a. Process followup requests within the timeframe specified on inquiry documentation received from the DSCs.

b. Inquire the Completed Receipt File for data pertaining to the receipt.

c. Inquire Suspended Receipt File for receipts in process.

d. Perform physical check of the receiving area for receipt in question.

e. Request search of warehouse locations to see if materiel has been stowed.

f. Contact Inventory Office to determine if any previously identified Depot Balance and Transaction Register mismatches may account for the discrepancy.

g. Research active or completed contract files for applicable receipt information, i.e., contract, DD Form 250, computer generated receipt document or any documentation which may provide pertinent information.

h. Match available documentation with followup request to resolve discrepancy.

5. The DSC will be notified of research results, and appropriate action will be taken as directed by that office.

APPENDIX E-032 P

EXCEPTION DATA DISPOSAL RELEASE ORDERS

1. PURPOSE

This appendix provides instructions for:

a. Preparation of computer input Disposal Release Order (DRO) with exception data, DIC A5J with Management Code Z, appendix B-32.

b. Processing computer output A5J DRO documentation requiring exception data manual notation.

c. Processing computer output, appendix F-12, Transactions Rejected to DSC Listing.

d. Processing computer output, appendix F-85, Validation Reject Listing.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-32

b. Appendix B-226

c. Appendix D-41

d. Appendix D-65

e. Appendix F-12

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch is the designated functional element responsible for control of DRO documentation.

4. PROCEDURES/INSTRUCTIONS

a. Part A - DROs received via AUTODIN.

(1) When the depot receives an exception DRO (identified by a Z in pos. 72) the DRO image will be output on the F-113.

(2) Exception data will be obtained from the DSC and placed in suspense for subsequent annotation on the DRO document.

(3) The A5J will be reinput to the system with a blank in the second position of the DIC to bypass duplicate document checks. Entry may be by card or remote entry device.

(4) The exception DRO will be printed (DD Form 1348-1) and forwarded to Special Processing.

(5) Exception data is annotated on the DD Form 1348-1, one copy retained for suspense, and the DRO forwarded to the warehouse stock selection area.

b. Part B - Exception DROs received via means other than AUTODIN.

(1) Exception DROs may be received via mail, TWX or telephone message.

(2) If the DRO message is for PDO or retention quantities exceeding 99,999 process the DRO off-line, i.e., do not enter to MOWASP.

(3) The DRO may be input to MOWASP in accordance with appendix B-32 with two options:

(a) If output is desired on the F-113, enter the complete DRO format as specified. Procedures outlined in subparagraphs a(1) through (5) above, apply.

(b) If the F-113 output is to be bypassed enter a blank in the second position of the DIC. Procedures outlined in subparagraphs a(4) and (5) above, apply.

c. Part C - DROs automatically generated.

Automatic DRO generation is a result of receiving materiel in Condition Code H and Management Code M or T or an adjustment transaction (DIC DAC) Putting materiel in Condition Code H with Management Code M or T. If there has been insufficient data to complete all required fields in the DRO, an F-85 report will be generated. DS/T will:

(1) Research missing data elements on the F-85 and determine what the data should be.

(2) Input the DRO through normal processing for the next issue cycle.

d. Part D - General.

(1) In any of the above situations/conditions when exception data cannot be located/interpreted (i.e., correspondence containing source exception data cannot be found or meaning is unclear), forward a TWX to the originating DSC/ICP requesting missing data or clarification of exception data be furnished by a return TWX. Suspend A5J DRO as follows:

(a) File DRO in requisition number sequence suspense pending DSC/ICP reply.

(b) When TWX reply clarifying exception data is received, remove A5J card from suspense, annotate exception data, and reproduce A5J input card and forward to ODS for computer processing.

(2) When DSC/ICP replies that no exception data is required, or exception data is unavailable; annotate DRO A5J card, "No exception data furnished," and forward to ODS for processing.

NOTE: When a number of DROs are received which require the same exception data annotation, prepare stamping plate, stencil, or similar device to be used in marking exception data on DD Form 1348-1 computer output and clip to source documentation in the suspense file.

(3) DLA initiated DROs should have the following message mechanically printed in the remarks section of the DD Form 1348-1: "DoD Excess." If not, annotate the message manually. This message does not apply to Service-initiated DROs.

(4) When exception data requires address change, prepare entire new label portion to include TCN, RDD and exception address, and attach to DD Form 1348-1 with exception address attached to applicable stock selection area.

(5) When exception data pertains to followup data, annotate DD Form 1348-1 to reflect that exception followup data is to be made upon completion of shipment. Forward DD Form 1348-1 to applicable stock selection area.

(6) File DRO exception source document in completed exception suspense file by month completed major, document number minor sequence. Retain completed file for 45 days following end-of-month in which shipment confirmation is made.

d. Part D - Disposal Release Denial/Adjustment, DIC A6J.

(1) When basic stock locator records reflect Manager Code W (DLA and Service Managed) for an NSN received in a DRO action and the retention quantity field (pos. 55-61) of DRO is zero/numeric filled, prepare and mail a MRD Card (DD Form 1348m) DIC A6J with Management Code C in pos. 72 to the DSC.

(2) With the exception of numeric (denial) Management Code 3 or 9, all other numeric (denial) Management Codes will be considered valid to specify conditions which preclude shipment of the directed DRO quantity or compliance with disposal instructions.

(3) When appendix F-12, transactions rejected to DSC listing resulting from the above situation/condition is received from CDS, Shipping Documentation Branch shall take action as follows:

(a) Remove applicable source documents from suspense file.

(b) Attach exception source documents to copy of appendix F-12. Place in completed exception suspense file by month completed major, document number minor sequence. Retain completed file for 45 days following end-of-month in which document was rejected.

APPENDIX E-032 V

DISPOSAL RELEASE ORDER VIOLATIONS

1. INPUT DOCUMENTS

Appendix B-32, Disposal Release Order, DIC A5J

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-65

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Violation Printout, appendix F-85, Violation Followup (MRO) and (DRO) Listing, appendix F-118, applicable to Disposal Release Orders (DIC A5J) which have rejected from computer processing. The following Violation Reason Codes with reject cause indicated, are to be corrected and reinput by Shipping Documentation Branch who is the responsible organizational element.

VIOLATION REASON CODE	DEFINITION
AB	Invalid RIC - From.
AF	Invalid Condition Code.
AI	Invalid or blank document number filed.
AM	Unit Price invalid.
AN	Invalid UI.
AS	Invalid Quantity
AU	Invalid Signal Code.
AY	Invalid stock number.
HL	Invalid effective transfer date.
RE	Unmatched in cumulative register.
2G	Invalid or blank DEMIL Code.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AB.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AB indicates a DRO document has been received with an invalid "FROM" Routing Identifier in pos. 67-69. (This violation is not suspended in the Cumulative Register.)

(2) PROCESSING/RESEARCH REQUIRED

(a) Attempt to identify the applicable DSC/ICP that submitted the DRO, through interrogation of the Item Locator Record.

1. Prepare Item Locator Inquiry Card (appendix B-79 as outlined in appendix E-079 P DIC ZBJ) with type of Action Code FE in pos. 79-80 (appendix A-42).

2. Forward Inquiry Card to data processing via keypunch or by use of remote entry device, for mechanical processing.

3. Receive Item Locator Data Inquiry Answer Listing (appendix F-37).

(b) Review listing (appendix F-37) to determine Commodity Manager Code and R/I and continue processing as outlined in paragraph 5 below (see appendices A-44 and A-2).

b. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AF denotes a DRO document has been received with an invalid Condition Code (other than A, B, C, D, E, F, G, H, J, K or L) in pos. 71.

(2) PROCESSING/RESEARCH REQUIRED

(a) Processing personnel will obtain a valid Condition Code by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

c. VIOLATION REASON CODE AI.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AI denotes a DRO document has been received with blank columns in document field, pos. 30-43. (This violation is not suspended in the cumulative register.)

(2) PROCESSING/RESEARCH REQUIRED

(a) Processing personnel will attempt to obtain a valid document number by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

d. VIOLATION REASON CODE AM.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AM denotes a DRO document has been received with an invalid unit price in pos. 74-80 (field containing blanks, alpha, or all zeros, alpha F in pos. 80 acceptable in Commissary MRO).

(2) PROCESSING/RESEARCH REQUIRED

(a) Processing personnel will obtain the correct unit price for the NSN involved by querying the submitting DSC/ICP by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

e. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AN denotes a DRO document has been received with an invalid unit of issue. A blank or other than alpha entry in pos. 23-24.

(2) PROCESSING/RESEARCH REQUIRED

(a) Processing personnel will attempt to obtain the proper unit of issue abbreviation through interrogation of item locator record or through local records. If correct information cannot be obtained locally, telephone the DSC/ICP for correct data.

(b) Continue processing as outlined in paragraph 5 below.

f. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AS indicates that data in pos. 25-29, disposal quantity and/or in pos. 52-59, retention quantity of DRO Document is invalid. Disposal quantity, pos. 25-29, cannot contain blanks, alphas, or be zero filled. Retention quantity, pos. 52-59, may be blank, all zeros, or all numeric, but cannot contain alphas.

best copy available

(2) PROCESSING/RESEARCH REQUIRED

Review Violation Printout, appendix F-85, to determine which quantity field(s) is in error. Notify the appropriate DSC (by TWX or telephone) outlining circumstances and requesting valid quantity data be provided. Pending reply from DSC, suspend further action on DRO as follows:

(a) Keypunch A5J using violation printout list as source data omitting invalid field(s). Annotate DSC, telephone, extension, and person contacted on A5J card, date, stamp, and file in date sequence major, document number sequence minor suspense.

(b) Followup to DSC every third day until reply is received.

g. VIOLATION REASON CODE AU.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AU denotes a MRO document has been received with an invalid Signal Code in pos. 51 (code other than A, B, C, D, W, X, J, K, L or M). Reference appendix A-8.

(2) PROCESSING/RESEARCH REQUIRED

(a) Processing personnel will obtain a valid Signal Code by querying the DSC/ICP reflected in pos. 67-69 by telephone for IPGs I and II and by TWX for IPG III.

(b) Continue processing as outlined in paragraph 5 below.

h. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AY denotes a DRO document has been received with an invalid stock number (pos. 8-20 contains blanks except for pos. 14 which may contain alpha).

(2) PROCESSING/RESEARCH REQUIRED

(a) Processing personnel will attempt to obtain the complete stock number by querying the DSC/ICP reflected in pos. 67-69. For IPGs I and II use telephone. For IPG III use TWX. When the correct stock number cannot be furnished, take cancellation action by reinput of document using DIC ZZ9.

(b) When correct stock number is obtained, continue processing as outlined in paragraph 5 below.

i. VIOLATION REASON CODE HL.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code HL indicates that DRO Citing Purpose Code M, pos. 70, combined with an incompatible Mandatory Transfer Data (MTD) (alpha/numeric combination, all alpha, all zeros, three digit number greater than 366 or blank) in pos. 62-64 has rejected from computer processing.

(2) PROCESSING/RESEARCH REQUIRED

Notify the appropriate DSC (by TWX or telephone) outlining circumstances and requesting a valid MTD be furnished. When no immediate reply is made by DSC, create a suspense file by following procedure outlined in paragraphs 4b(2)(a) and (b) above.

j. VIOLATION REASON CODE RE.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code RE indicates that an attempted deletion from the Cumulative Register, DIC ZZ9, did not match a record in the Cumulative Register.

(2) PROCESSING/RESEARCH REQUIRED

(a) Processing personnel will obtain the original DRO violation (appendix F-85), retained as backup for the administration decision to delete the MRO violation (see paragraph 361303c, chapter 61 of this volume), and determine the reason for the no match condition.

(b) When the reason for the no match condition is ascertained, annotate the Violation Printout with the correct data element and continue to process as indicated in paragraph 5 below.

k. VIOLATION REASON CODE 2G.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code 2G indicates pos. 73 of the DRO is blank or contains data other than A through M (less I).

(2) PROCESSING/RESEARCH REQUIRED

Notify the appropriate DSC (by TWX or telephone) of the invalid code and request a valid code. When no immediate reply is furnished, create a suspense file by following the procedure outlined in paragraphs 4b(2)(a) and (b) above.

5. REENTRY INSTRUCTIONS

a. Remove A5J card from suspense when reply is received and keypunch information furnished by DSC. When all card entries are valid/complete, forward card to Office of Data Systems for processing closeout of violation suspense file and preparation of DD Form 1348-1.

b. Violation Followup Listing, appendix F-118 will be cumulative. Therefore, a A5J violation entry will continue to be listed daily starting the second day following initial input of invalid document image which listed the first day on Violation Printout Listing, appendix F-85.

c. Assure that all open A5J, Violation Followup Entries, appendix F-118 and A5J, Violation Entries, appendix F-85 have a matching suspense card indicating action taken. (Reference paragraphs 4b(2)(a) and (b) above.) When no A5J suspense card is found, follow procedures in paragraph 4 above for applicable code.

APPENDIX E-033 P

REQUEST FOR AND RESULTS OF TESTS

1. FORM/REPORT USED

Appendix C-84, Request and Results of Tests, DD Form 1222

2. REASON/CRITERIA FOR PREPARATION

DD Form 1222 will be utilized when laboratory testing is required as a result of in-storage inspection, receipt inspection, DLA Quality Audit, or upon receipt of instructions from the DSC.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. The Quality Control Office is responsible for initiating the DD Form 1222 upon receipt of a returned copy of a previously submitted DD Form 1225/SF 364 approving/directing the test and a DD Form 1348-M containing required data.

b. The Stock Readiness Branch, Warehousing Division, or the Inspection Branch, Receiving Division, will be responsible for selecting necessary samples and providing materiel and documentation to the Shipping Division.

c. The Quality Control Office is responsible for maintaining the record copy of submitted DD Form 1222 with the supporting copy of the DD Form 1225/SF 364.

d. The Product Quality Audit Division/Branch will prepare and retain copies of DD Forms 1222 for items subjected to product quality audits and as directed by the managing DSC.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Source(s) of Information.

DD Form 1222 is prepared when serviceability standards or DSC Directives require tests be performed on a specific item of supply and a Materiel Release Order (MRO) has been received from the managing DSC directing the movement of materiel to a test site.

b. Preparation of Form/Report.

Prepare a complete DD Form 1222 as follows:

BLOCK NUMBER	TITLE	INSTRUCTIONS
1	To	Submit to appropriate DSC laboratory.
2	From	Enter storage activity address.

BLOCK NUMBER	TITLE	INSTRUCTIONS
3	Prime Contractor, Address and Contract Number	Enter applicable data.
4	Manufacturing Plant Name and Address	Enter applicable data.
5	End Item or Project	Enter stock number.
6	Sample Number	Enter locally assigned number.
7	Lot Number	Enter lot number (a separate DD Form 1222 will be required for each lot).
8	Reason for Submittal	Enter type inspection.
9	Date Submitted	Self-explanatory.
10	Materiel to be Inspected	Noun description of item.
11	Quantity Represented	Enter total quantity on hand of item.
12	Specification and/or Drawing No. for Sample and Date	Enter applicable data.
13	Purchased From or Source	Enter applicable data.
14	Shipment Method	Self-explanatory.
15	Date Sampled and Submitted By	Storage activity address and date.
16	Remarks, and so on	Enter such data as date of pack and condition code of item.
17	Send Report of Test To	One copy to address of storage activity submitting samples and one copy to the appropriate DSC.

c. Signature/Approval Requirements.

None required by originating activity.

d. Distribution of Form/Report.

The completed DD Form 1222 will be prepared with original and four copies and will be distributed as follows:

(1) Original and 3 copies - Shipped with samples to the test site.

(2) Fourth copy - To suspended Inspection File in the Quality Control Office.

e. Detailed Procedure.

(1) When inspection of materiel or when Storage Serviceability Standards indicate a requirement for the testing of an item of supply, that portion of materiel possessing the critical characteristic will be assigned Condition Code J, K or L (appendix A-16), as appropriate.

(2) A DIC ZAC will be prepared and processed through the MOWASP System to create a DIC DAC to the managing activity to cause the recording of the changed Condition Code on the records of the managing activity, or if a receipt transaction, the receipt confirmation will be reported in Condition Code K or L as pertinent.

(3) A supporting DD Form 1225/SF 364, in accordance with appendix E-150 P or E-160 P, will be forwarded to the managing DSC.

(4) The managing DSC, upon receipt of the DD Form 1225/SF 364, will prepare a DD Form 1348-M, annotate the required data on the depot copy of the SF 364/DD Form 1225 and forward documents to the initiating depot.

(5) The Quality Control Office will receive the annotated copy from the DSC of the SF 364 or DD Form 1225 with the attached MRO. The MRO (DIC A5E) will contain the test directive number, Project Code 3G3 or 3G4 (see note below) and document number. Quality Control Office will utilize the provided data to prepare a coding sheet for input of the MRO to the computer process, ensuring pos. 3 contains an eight or nine punch (as appropriate) to cause computer preparation of the DD Form 1348-1 and any related documentation.

NOTE: Quality Control Office will coordinate with necessary function to assure the processing in accordance with appendix B-66, table 02 and appendix B-129, Project Instructions of Project Codes 3G3 and 3G4 to the table and controls file. The referenced project codes will cause the message FORWARD MRO TO QCO to be printed in block D of the DD Form 1348-1.

(6) The depot MRO Distribution System will assure the DIC A5E documents containing referenced message are provided to the Quality Control Office.

(7) The Quality Control Office, upon receipt of A5E MROs will prepare a DD Form 1222 in accordance with paragraph 3a above, attach to shipping documentation and forward for stock selection and shipping action. A copy of the DD Form 1222 will be attached to the file copy of the original DD Form 1225.

(8) Confirmation of shipping action will be accomplished in a routine manner.

(9) Instances in which the DSC determines a test will require less than a full UI, e.g., one gallon out of a barrel, the DSC will prepare an exception data MRO, DIC A5E. The quantity field will be zero filled and the exception data will provide the details of the transaction to include the shipping address, quantity, and advice as to disposition of the remaining contents of the original UI. The depot will prepare a manual MRO to comply with directed actions. If urgency of test requires expedited action, the MRO may be transmitted by telephone or message. Confirmation of shipment will not be mechanically made to the DSC.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE TO OR RETURNED FORM/REPORT

The DSC laboratory will return one copy of the DD Form 1222 to the storage activity originating the request and one to the appropriate DSC, with section B, results of test portion of form completed, to include quantity lost or consumed during testing. Based on results of test for the item Stock Readiness Branch will pull suspended inspection file and initiate action to make necessary adjustments to computer records by reentry of the Inspection Test Card, DIC ZCO. Reference appendices B-116, D-62, D-63, and E-116 P.

6. DISPOSITION OF FORM/REPORT AFTER FINAL ACTION

Completed DD Form 1222 will be attached to and retained with corresponding DD Form 1225, Inspection Report, until the basic document is destroyed under current records disposition procedures.

APPENDIX E-034 P

SHIPMENT TRACER REQUESTS

1. PURPOSE

This procedure describes the actions necessary to initiate manual tracing action with the USPS for Registered, Insured and Certified Parcel Post shipments identified on the Shipment Tracer Request Listing (appendix F-35).

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix D-182

b. Appendix F-35

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

Upon receipt of the Shipment Tracer Request Listing, appendix F-35, the following actions will be taken for each shipment identified on the listing.

a. Initiate tracer action under U.S. Postal Service Regulations to the Post Office from which the parcel was mailed. Postal Service Form 1510 or other prescribed forms will be used.

b. On receipt of Post Office response, initiate appropriate action as follows:

(1) If notified that the parcel was lost, destroyed, and/or that proof of delivery could not be furnished, notify the consignee accordingly by off-line narrative message to include advice to prepare Shipment Discrepancy Report in accordance with Joint Regulation, DLAR 4140.55, AR 735-11-2, NAVSUPINST 4440.127C, AFRf 67-16, MCO 4430.3C.

(2) If notified that the Post Office has proof of delivery, notify the consignee (based on Signal Code, pos. 51) by off-line narrative message, including particulars concerning proof of delivery, with an information copy to ICP/IMM involved.

APPENDIX E-035 P

SHIPPING DOCUMENT FOR GFM TURN-IN (DD FORM 1483)

1. FORM USED

Appendix C-35, Shipping Document for GFM Turn-In, DD Form 1483.

2. REASON/CRITERIA FOR PREPARATION

a. Shipping Document for GFM Turn-In (DD Form 1483) should be used by contractors in returning Government Furnished Materiel to the Depots.

b. The Distribution Depot prepares and distributes DD Form 1483 when materiel is received from the contractor without accompanying documentation.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Operations and Inspection Branches, Receiving Division, and Area Control Branches, Warehousing Division.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Sources of Information.

(1) The DD Form 1483 is completed based on inspection of materiel.

(2) The DD Form 1483 is prepared, when required, from information obtained from local sources, as follows:

(a) Prepositioned Materiel Receipt File.

(b) Advance copies of procurement instruments, and any authorized delivery documents, including vendor's invoice and/or packing lists.

(c) Bills of Lading and transportation records.

(d) Container markings.

NOTE: In the event above referred to documentation is not available, the DSC will be contacted for missing documentation or information to permit proper preparation of receiving documents.

b. Preparation of Forms.

(1) Complete the following blocks on DD Form 1483 upon receipt of materiel:

BLOCK NUMBER	TITLE	INSTRUCTIONS
25-29	Quantity Received	Record the tally in or actual count of Quantity Received.
H	Condition	Record Condition Code of materiel, appendix A-16.
P	Receipt	Warehouseman removing the materiel from carrier date and sign. Inspector date and sign.
I	Remarks	Record any discrepancies that may be noted as a result of receipt or inspection.

(2) Preparation of DD Form 1483 by Depot personnel when materiel is received from vendor without DD Form 1483.

(a) Serviceable and unserviceable turn-ins will be documented separately. The type of turn-in will be indicated by the insertion of an "X" in the "Serviceable" or "Unserviceable" box on the form, as appropriate.

(b) Complete "Page ___ of ___ pages."

(c) Complete the following blocks on DD Form 1483 upon receipt of materiel:

BLOCK NUMBER	TITLE	INSTRUCTIONS
A	Contract Number	Enter full Contract Number.
B	Ship To	Enter name and address of storage activity or depot receiving the Government furnished materiel.
C	Mark For	As directed/determined. (Storage)
D	Ship From	Enter name and address of shipping contractor as listed in DoD Activity Address Directory.
E	Office Administering Contract	Enter name and address of activity administering the cc [illegible] known.

BLOCK NUMBER	TITLE	INSTRUCTIONS
30-39	Document Number (Basic)	Extract from receiving document.
52-53	Fund	Extract if shown on receipt document.
57-59	Project	Extract if shown on receipt document.
60-61	Priority	Extract if shown on receipt document.
8-22	Stock Number	Enter Stock Number.
23-24	Unit of Issue	Enter appropriate Unit of Issue.
F	Quantity Shipped	Enter Quantity Shipped according to receipt documentation; otherwise, leave blank.
40-43	Serial Number	For Air Force contractors only. Enter Serial Number in sequence from the block allocated by the property administrator. The Serial Number shall not be duplicated on any one day. For all other contractors. Enter Serial Number beginning with 0001 each day and continue in numerical sequence. The Serial Number will not be duplicated on any one day. NOTE: Serial Number in combination with Document Number (Basic), pos. 30-39, forms complete Document Number for each Line Item.
G	Unit Price	Acquire and enter Unit Price.
I	Remarks	Enter, as applicable, Manufacturers' Code and Part Number, Item Description or Publication Reference, Stock Number over 16 digits, and any other information that will be useful in identification of the receipt.

BLOCK NUMBER	TITLE	INSTRUCTIONS
J	Date Shipped	Enter date released to carrier, if known.
K	Mode of Shipment	Enter appropriate code from appendix A-17.
L	Carrier	Enter name of Carrier.
M	Bill of Lading Number	Enter Bill of Lading Number, if shipped by commercial carrier. Enter transportation control number if shipped by military truck, LOGAIR, or QUICKTRANS.
N	Number of Containers	Enter total Number of Containers.

(d) When continuation sheets are necessary, the following minimum entries are required on the second and all succeeding pages of DD Form 1483.

BLOCK NUMBER	TITLE
Block A	Contract Number - Page ___ of ___ Pages
Block B	Ship To
Block C	Mark For (if applicable)
Block D	Ship From
Block E	Office Administering Contract

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING DD FORM 1483

a. Operations Branch Receiving Division, and Area Control Branches, Warehousing Division, will:

(1) Receive and tally-in materiel in accordance with appendix E-047 P, Processing Receipts for Reporting and Storage.

(2) Contact Inspection Branch, Receiving Division, when receipts require technical inspection.

(3) Prepare or complete DD Form 1438 as outlined in paragraph 4b above.

NOTE: Shoe lasts shall be completed per DLAM 4140.2, paragraph 313107 of this volume.

(4) Forward the DD Form 1438 immediately to Receipt Documentation Branch, Receiving Division.

b. Inspection Branch, Receiving Division, will:

(1) Conduct technical inspection of receipts upon request from Operations Branch, Receiving Division, and Area Control Branches, Warehousing Division.

(2) Prepare or complete DD Form 1483 as outlined in paragraph 4b above.

(3) Forward the DD Form 1483 immediately to Receipt Documentation Branch, Receiving Division.

c. Receipt Documentation Branch, Receiving Division, will:

(1) Receive DD Form 1483 from Operations and Inspection Branches, Receiving Division, and Area Control Braches, Warehousing Division.

(2) Complete receipt Confirmation in accordance with appendix E-108 P or E-110 P.

(3) Forward copy of completed DD Form 1483 to applicable DSC.

NOTE: Copies of DD Form 1483 completed for shoe lasts will be processed in accordance with DLAM 4140.2, Part 1, Chapter 3, of this volume.

6. DISPOSITION OF FORM AFTER FINAL ACTION

Completed DD Form 1483 will be filed in the Return off Government Furnished Materiel File, which will be retained for three months after receipt of materiel.

APPENDIX E-036 P

DISTRIBUTION DEPOT OPERATIONS AND PERFORMANCE REPORT
RCS DLA(M)232(0)MIN

1. APPENDICES/REPORTS USED IN THIS PROCESS

a. Appendix A-83, Management Information System Element Numbers.

b. Appendix B-95, Management Information System Report Card.

c. Appendix B-135, Management Information System Card (MIS).

d. Appendix D-80, Procedure Decision Chart-Management Information System Card.

e. Appendix D-102, Management Information System Report Data.

f. Appendix E-135 P, Procedures for Processing MIS Data Change Card ZUM, B-135.

g. Appendix E-135 V, Procedures for MIS Data Change Card Violations, ZUM, B-135.

h. Appendix F-9, Feeder Data for RCS DLA(M)232(0)MIN.

i. Appendix F-99, Management Information System (MIS) Change Card Listing.

2. REASON/CRITERIA FOR PREPARATION

Subject report is prescribed by HQ DLA in DLAH 7730.2, Management Information System Glossary; dated January 1982.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. The Office of Data Systems provides the appendix F-9 as an output of the process depicted in appendix D-102.

b. Management Support Office, Directorate of Storage and Transportation accomplishes management review of the F-9 report data for operational planning. MIS Report Cards, appendix B-95, will be mechanically prepared and forwarded to appropriate authority (HQ DLA).

c. Performance Analysis and Reports Division, Office of the Comptroller maintains central repository for central clearance of all materiel released outside the command.

d. Other directorates may utilize the data in conjunction with special studies.

4. PREPARATION OF REPORT

a. Data elements to be reported are established in DLAH 7730.2, Management Information System Glossary; dated January 1982.

b. Source data for the report will be obtained as follows:

(1) The F-9 report (Management Information System Feeder Data) part I, provides those elements which are accumulated mechanically in the MOWASP computer. Element numbers involved and "points of count" are shown and explained in appendix A-83, Management System Element Numbers.

(2) Those data elements which are not available in the F-9 Report, i.e., not susceptible to mechanical count, will be extracted from manual records and reports in accordance with definitions and "points of count" established in DLAH 7730.2, Management Information System Glossary.

c. Processing Adjustments to appendix F-9 reports.

(1) Maintaining the accuracy of the F-9, Feeder Data, for mechanically accumulated data elements will sometimes require increase or decrease adjustments in the daily and cumulative F-9 counts. Such adjustments will be processed in accordance with appendix E-135 P, in card format as shown in appendix B-135.

(2) Output of increase/decrease adjustments will be reflected in the MIS Change Card Listing, appendix F-99.

d. Signature/Approval Authority.

Approval is subject to local MIS supervisory control. Adequate reports control procedures will be established to ensure that MIS cards are keypunched and transceived.

e. Distribution of Report.

The computer prepared F-9 Report will be distributed as follows:

(1) The original and one copy to the Performance Analysis and Reports Division, Office of Comptroller.

(2) Two copies to the Management Support Office.

(3) Two copies to the Workload Control Branch, Operations Control Office, Directorate of Storage and Transportation.

(4) MIS Cards are transceived to HQ DLA and filed by the Office of Data Systems.

(5) MOWASP Reports and other source documents are filed by the Office of the Comptroller.

5. DISPOSITION OF REPORT AFTER FINAL ACTION

a. Daily F-9 listings will be retained three months and then destroyed.

b. Monthly listings (final reports) for a report period to HQ DLA as controlled by the Comptroller will be filed by the:

(1) Office of Comptroller - two years.

(2) Directorate of Storage and Transportation - one year.

c. MIS Card files are to be retained three months by the Office of Data Systems and then destroyed.

d. Supporting MOWASP and other source documents will be retained for three months at a minimum.

APPENDIX E-037 P

DD FORM 805 AND DLA FORM 527, STORAGE SPACE MANAGEMENT REPORT AND SPACE RECAPITULATION RECORD

1. PURPOSE

This procedure describes the basic steps required for accomplishing space surveys and reporting. These surveys and reports are required to maintain effective local management of storage space capacities and provide appropriate off-post agencies data for analysis needed for future supply decisions.

2. APPENDICES USED IN THIS PROCESS

a. Appendix C-43.

b. Appendix C-83.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

MSO, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. Instructions - Local storage space control records will be maintained as required for planning current and future storage space assignments, and for compiling basic constant data elements.

b. These basic data elements, reported in units of square feet and cubic feet, identify the type of space by storage section and the commodity assigned to each section:

(1) Gross Storage Space (square feet).

(a) Available.

(b) Unusable.

(c) Standby.

(d) Outgranted.

1. To non-DoD users.

2. To DoD users.

(e) Used for Storage Operations.

(f) Aisles, Support, and Structural Loss.

(2) Net Storage.

(a) Total square feet.

(b) Total cubic feet.

(c) Attainable cubic feet.

(3) Storage Space Analysis (cubic feet).

(a) Requirement.

(b) Recoupable with additional resources.

(c) Requires major repair/renovation.

(d) Requires replacement.

(e) Attainable (to meet 5-year requirements).

c. Procedures - Data elements are reported in units of square feet and cubic feet on the DLA Form 527 (appendix C-83) by warehousing personnel. The original of the DLA Form 527 is to be forwarded to the MSO, DS/T, as of COB of the last working day of the month. The copy of the DLA Form 527 is retained by the Warehousing Division. After adjustments to storage space control records, if any, the MSO will consolidate data reported on the DLA Form 527.

d. Submission of the DD Form 805:

(1) The MSO will prepare transcript sheets for submission of the DD Form 805 report to HQ DLA (DLASC) via AUTODIN, IAW appropriate MIS 178 instructions.

(2) A narrative analysis will be prepared by the MSO, IAW MIS 178 instructions, and submitted to HQ DLA, ATTN: DLA-OW.

(3) In the event of a temporary loss of capability to transceive storage space data via AUTODIN, punched cards will be prepared in the format prescribed in MIS 178 instructions and dispatched to HQ DLA, ATTN: DLA-OW, via mail channels.

e. Preparation of DD Form 805.

(1) Reports as of 30 September and 31 March:

(a) Reports will be confined to section B, lines 9-15 (less line 10) and Remarks of the DD Form 805. Remarks will be continued on the back of the DD Form 805 if additional reporting space is required.

(b) A consolidated DD Form 805 will be prepared for storage space allocated/assigned DLA and non-DLA. Entries on lines 9-15 (less line 10) will indicate total by installation.

(c) The remarks portion of the DD Form 805 will include a breakout by DLA commodity and other allocation/assignment, identifying:

1. Covered storage space total square feet allocated, occupied square feet and cubic feet, and vacant square feet and attainable cubic feet (lines 9, 11, 12, 13 (including 13a, b(1), and b(2)) 14, and 15).

2. Open improved square feet and cubic feet occupied.

3. Open unimproved square feet and cubic feet occupied.

(2) Reports as of 30 June and 31 December:

(a) Reports will include section A, lines 1-8; section B, lines 10 and 16-18; section C, lines 19-22; and section D, lines 23-26.

(b) A consolidated DD Form 805, including applicable entries on lines 1-8, 10, and 16-20, in addition to entries established in subparagraph (1)(C)1 above.

(3) The following detailed instructions apply to the data required in the heading of this report:

(a) Report Date - Enter the report period date, using the last two digits of standard data element year, two digits for month, and two digits for day (for example: 30 June 1975 will be 750630).

(b) Frequency - Leave blank.

(c) Installation Code and Name - Enter the 4-character alpha identity code and installation name as shown below:

INSTALLATION IDENTITY CODE	NAME OF INSTALLATION	CITY/STATE
XCQM	DDTC	Tracy, CA
WJAT	Stockton Storage Facility	Stockton, CA
FCHZ	DESC	Dayton, OH
EFGV	DCSC	Columbus, OH
TDXA	DPSC	Philadelphia, PA
PVRY	DDMP	Mechanicsburg, PA
PYKE	DDMT	Memphis, TN

INSTALLATION IDENTITY CODE	NAME OF INSTALLATION	CITY/STATE
SGQM	DDOU	Ogden, UT
UEXL	DCSC	Columbus, OH
UEXP	Arlington Road Photographic Facility	Richmond, VA
ZZZQ	DIPEF	Atchison, KS
AZTQ	Defense Storage Facility	Bayonne, NJ

(d) DoD Component - Enter the letter S for DLA.

(4) All data values requiring an expression of areas in gross square feet will be computed by:

(a) Using inside measurements between exterior walls, without deductions for firewalls or other structural losses.

(b) Using overall measurements of open storage areas with no deductions for trackage and permanent road within the area. However, in the case of unimproved open areas, only that space actually occupied by stored materiel or used in support of storage operations will be reported.

(5) The following detailed instructions apply to the data values required in the line items of this report:

(a) Section A - Gross Storage Space (SQ FT).

1. Line 1, Prior 30 June Report - Enter under columns (b) through (i) the amounts of gross storage space reported by the activity on line 2 of prior 30 June report.

2. Line 2, This Report - Enter under columns (b) through (i) the amounts of reportable gross storage space at the activity.

3. Line 3, Unusable - Enter under columns (b) through (h) the amount of gross storage space determined to be unusable, as follows:

a. Space so deteriorated that it fails to provide a sufficiently protective environment for the storage of materiel.

b. Space that is unsafe for any storage purpose of operation.

c. Space that because of its location is an unwarranted security risk or its occupancy would be in violation of local safety ordinances.

4. Line 4, Standby Enter under columns (b) through (h) the amount of gross storage space in standby status.

5. Line 5, Outgranted to Non-DoD Users - Enter under columns (b) through (i) the amount of gross storage space which is leased, licensed, or permitted to private or non-DoD Government (Federal, state, county, or local) agencies for their operation. Include space classified as storage space at the time it was outgranted, even though it is not now being used for storage purposes.

6. Line 6, Outgranted to DoD Users - Enter under columns (b) through (i) the amount of gross storage space which is licensed or permitted to other DoD components for their operations.

7. Line 7, Used for Storage Operations - Enter under columns (b) through (i) the amount of gross storage space being used for storage operations. Include gross storage space which is operated by the reporting activity wherein interagency support in storage and warehousing services are provided to another DoD component or Federal Agency.

8. Line 8, Aisles, Structural Loss, Support Space - Enter under columns (b) through (i) the amount of space which is used for:

a. Aisles within the storage area.

b. Functions in support of storage operations (e.g., receiving, shipping, packaging, and so on).

c. Space not usable for storage because of construction features or physical characteristics.

(b) Section B - Net Storage.

1. Line 9, Total Square Feet - Enter under columns (b) through (i) the amount of net storage space at the installation as determined by subtracting entries on line 8 from the entries on line 7.

2. Line 10, Total Cubic Feet - Enter under columns (b) through (i) the product of the entry on line 9 extended by the unobstructed stacking height permitted by safety restrictions. Total cubic feet in improved open storage, under column (h), shall be computed by using an average stacking height of 10 feet. The total cubic feet to be reported under column (i) for unimproved open storage shall be actual occupied.

3. Line 11, Attainable Cubic Feet - Enter under columns (b) through (i) the amount of cubic space in the total cubic feet which is usable for the storage of materiel. The cubic capacity to be reported on this line is limited to the stacking height attainable under the present storage arrangement and achieved with available equipment, e.g., storage aids and Materiel Handling Equipment (MHE).

a. In covered storage areas, the entries will be the result of adding the amounts of usable cubic space in bin, racks, and bulk storage areas and will be computed as follows:

(1) Bin usable cubic space is the product of the bins outside dimensions - length, width, and height (L x W x H). Cubic space above the bins will not be included.

(2) Rack usable cubic space is the product of the racks outside dimensions (L x W x H). Cubic space above the racks will be included to the extent that use of such space is permitted by safety limitations and the capacity of available MHE.

(3) Bulk usable cubic space is the product of the net storage square feet used for bulk storage multiplied by the stacking height permitted by safety restrictions and floor load limitations attainable with available MHE and storage aids. Cubic space beyond the reach of available MHE lift height and floor load limitations will not be included even though safety limitations or permisable stacking heights have not been attained.

b. In open storage areas the attainable cubic feet in improved space shall generally be computed by multiplying the net storage square feet using an average stacking height of 10 feet. Where local conditions and actual commodity characteristics dictate a specific stacking height, the latter shall apply. In unimproved space, the attainable cubic feet will be that actually occupied by stored materiel.

4. Line 12, Occupied Square Feet - Enter under columns (b) through (i) that portion of the entries on line 9 which is occupied by bins, racks, and materiel in bulk storage areas.

5. Line 13, Occupied Cubic Feet - Enter under columns (b) through (i) the cubic capacity of occupied bins and racks and the cubic space above floor areas which is occupied by materiel in bulk storage areas. The methodology of determining bin and rack occupancy may be a statistical sampling or a simple record of available and occupied openings.

6. Line 13a, Reporting Component's Materiel - Enter under columns (b) through (i) that portion of the entries on Line 13 which is occupied by DLA commodities and other DLA-owned materiel.

7. Line 13b, Common/Cross Services - Enter under columns (b) through (1) that portion of the entries on line 13 which is occupied by materiel being stored on a common/cross serviced basis.

8. Line 13b(1), DoD Materiel - Enter under columns (b) through (i) the amount of cubic space reported on line 13b which is occupied by DoD materiel, including household goods and personal effects belonging to military personnel.

9. Line 13b(2), Non-DoD Materiel - Enter under columns (b) through (i) the amount of cubic space reported on line 13b which is occupied by non-DoD materiel.

10. Line 14, Vacant Square Feet - Enter under columns (b) through (h) the difference between line 9 and 12.

11. Line 15, Vacant Cubic Feet - Enter under columns (b) through (h) the difference between lines 11 and 13.

12. Line 16, Unobligated Square Feet - Enter under columns (b) through (h) that portion of the vacant square feet reported on line 14 which is not obligated to any future requirement.

13. Line 17, Unobligated Cubic Feet - Enter under columns (b) through (h) that portion of the vacant cubic feet reported on line 15 which is not obligated to any future requirement.

14. Line 18, Recoupable Cubic Feet through Rewarehousing - Enter under columns (b) through (g) the amount of cubic space in occupied locations reported on line 13 that can be recouped through rewarehousing.

(c) Section C - Storage Space Analysis (Net Cubic Feet).

1. Line 19, Requirements (Next Fiscal Year) - Enter under columns (b) through (h) that amount of net attainable cubic space required to satisfy the obligated requirements for the next fiscal year. Requirements for materiel currently stored in open unimproved space (column (i)) will be shown under the appropriate column(s).

2. Line 20, Recoupable with Additional Resources - Enter under columns (b) through (h) the sum of the following:

a. The difference between line 10 (Total Cubic Feet) and line 11 (Attainable Cubic Feet).

b. The total cubic feet obtainable through the reactivation of standby space and the retrieving of outgranted space. The total cubic feet will be determined based upon the net to gross ratio existing between line 10 (Total Cubic Feet) and line 7 (Used for Storage Operations (Gross).

3. Line 21, Requires Major Repair/Modification - Enter under columns (b) through (i) the total cubic feet in need of major repair/modification to raise it to an adequate status for storage purposes. The repairs/modifications to be reported herein are those estimated to cost $50,000 or more for an individual structure or open storage area.

4. Line 22, Requires Replacement - Enter under columns (b) through (h) the total cubic feet of space in need of replacement for which there is a continuing requirement and the repair of which is not economically justifiable.

(d) Section D - Five Year Storage Space Requirement (Net Cubic Feet) For Years 2 through 5.

1. Line 23, Attainable - Enter for each fiscal year the total amount of attainable cubic feet of covered and open improved space, as reported on line 11, columns (b) and (h), adjusted as necessary to reflect ongoing programed changes, including inactivation of facilities and placing them in standby, diversion and disposal, new acquisitions from construction and conversion, reactivation from standby, and recovery from outgrant.

2. Line 24, Requirements - Enter for each fiscal year for covered and open improved space the attainable cubic feet required to satisfy the projected requirements.

3. Line 25, Excess (+ Plus)/Deficient (- Minus) - Enter for each fiscal year for covered and open improved space the difference obtained by subtracting line 24 (Requirements) from line 23 (Attainable).

4. Line 26, Recoupable with Additional Resources - Enter for each fiscal year for covered and open improved space the total cubic feet of storage space recoupable with additional resources, as reported on line 20, with adjustments for each fiscal year, as appropriate.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART A
INITIAL TELEPROCESSING INPUT

1. PURPOSE

This procedure provides the capability of initiating the SEAVAN Shipment Planning teleprocessing program.

2. APPENDICES USED IN THIS PROCEDURE

Reference subsequent parts for appropriate appendices.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General

(1) This procedure provides instructions for accomplishing all SEAVAN Shipment Planning maintenance.

(2) Chapter 9 of this volume describes the use and content of the SEAVAN Shipment Planning Function.

b. CRT Initialization:

(1) To initiate the program, key in $$UWTT01 and press the Enter key. The CRT will be dedicated to this program until another $$ entry is made.

(2) This input will result in a display of SEAVAN Processing Section Codes (see figure 1 below).

NOTE: Several types of transactions may be accomplished within a section.

c. Select the appropriate Section Code, key it in, and press the Enter key. If an incorrect entry is made, the panel will be brought back so that reentry of a valid code can be made. A correct input will result in one of the following displays:

(1) MR - MTMC Release, reference appendix E-038 P, part B. This format is used to accomplish all MTMC Release File Maintenance (appendix B-275).

(2) IP - Update Load Record with MTMC Data, reference appendix E-038P, part C. This format is used to accomplish all maintenance for in-process loads as a result of data not being available at the time the SEAVAN load was released (appendix B-278).

(3) EP - Equipment Pool, reference appendix E-038 P, part D. This format is used to accomplish all Equipment Pool File Maintenance (appendix B-276).

(4) WR - Workload Request by Destination or Document Number, reference appendix E-038 P, part E. This format is used to request workload by destination or document number.

(a) Request by Destination (appendix B-257).

(b) Request by Document Number (appendix B-258).

(5) PR - Load Exception Process, reference appendix E-038 P, part F. This format is used to:

(a) Request additional MROs to complete a SEAVAN load which is in-process (appendix B-256).

(b) Remove a line item from a configured SU (appendix B-279).

(c) Partial a line item (appendix B-279).

(d) Remove an SU from a load and add the SU to a load being assembled for the same destination (appendix B-273).

(e) Return an SU to the SEAVAN Workload Bank (appendix B-279).

(6) AD - SU Offer and MRO Adjustment, reference appendix E-038 P, part G. This format is used to:

(a) Report an overshipment due to item packaging (appendix B-264).

(b) Enter an MRO cancellation (appendix B-260).

(c) Report an undershipment due to item packaging (appendix B-265).

(d) Accomplish a denial when insufficient or no stock in the requested quantity is available for shipment (appendix B-262).

(e) Accomplish a denial for a medical controlled substance that requires an export permit when the exact quantity is not available in support of an FMS shipment (appendix B-261).

(f) Flag an MRO that has a value less than $200.00 to prevent notification to the DSC that cancellation action will not be effected (appendix B-263).

(g) Enter a date offered to transportation (appendix B-259).

(7) SP - Special Processing, reference appendix E-038 P, part H. This format is used to:

(a) Remove an MRO from further automated processing (appendix B-266).

(b) Reject an MRO because the RDD cannot be met (appendix B-267).

(c) Force close a partially canceled MRO (appendix B-268).

(d) Change data elements already established in the in-process file (appendix B-270).

(e) Force close a MRO (appendix B-269).

(f) Confirm MROs shipped outside the SEAVAN process (appendix B-272).

(8) RL - Review/Closeout, reference appendix E-038 P, part I. This format is used to update erroneous or missing data which is necessary to print the SEAVAN TCMD Listing, F-211 and, if required, the SEAVAN Consist, F-62 (appendix B-274).

(9) MG - MRO Inquiry/Update, reference appendix E-038 P, part J. This format is used to determine the status of a SEAVAN MRO and provide for file maintenance of mandatory shipment planning data which was missing in MOWASP (appendix B-255).

(10) MH - Load/SU/LI Inquiry, reference appendix E-038 P, part K. This format is used to inquire file data by load, shipment unit or line item (appendix B-271).

(11) MI - MIS Reports, reference appendix B-038 P, part M. This format is used to inquire SEAVAN MIS data (appendix B-280).

(12) TC - Table and Control Inquiry/Update, reference appendix E-038 P, part L. This format is used to:

(a) Provide information concerning size, type and capacity of vans (appendix B-277).

(b) Identify hazardous type cargo codes which may be shipped in the same vans (appendix B-277).

(c) Maintain constants and controls in the SEAVAN System (appendix B-277).

(d) Maintain files which contain TAC data (appendix B-282).

(13) TR - Transshipment TCMD/Receipt - Inquiry/Update, reference appendix E-038 P, part O. This format is used to update/inquire Transshipment TCMD and Receipt Data.

(14) TW - Transshipment Workload Release, reference appendix E-038 P, part P. This format is used to release a complete or partial transshipment to a specific load.

(15) TH - TCMD History Inquiry, reference appendix E-038 R, part Q. This format is used to inquire the TCMD History File.

(16) TX - Load/TCMD XREF Inquiry, reference appendix E-038 P, part R. This format displays all TCNs assigned to a load.

5. ERROR MESSAGE/ACTION

ERROR MESSAGE	CAUSE/ACTION
MANDATORY ENTRY	Probable Cause: An invalid Section Code was entered. Action: Enter a valid Section Code as displayed on the panel.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART B
MTMC RELEASE

1. PURPOSE

This procedure describes the maintenance activities necessary to update or inquire data relating to the MTMC Release File.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9.

b. Appendix B-275.

c. Appendix D-194.

3. RESPONSIBILE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) This procedure provides instructions for accomplishing all MTMC Release File Maintenance.

(2) Whenever the number of large or small vans required is zero, the record will be automatically deleted. Also, whenever the current date exceeds the sailing date, the record will be automatically deleted.

b. CRT Initization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code MR and depress the ENTER key.

(3) The panel for file maintaining MTMC Release Data will be displayed. See figure 1 below.

(4) To inquire, add, change or delete data, key in the desired destination code and depress the ENTER key. If the record is on file, the screen will display the destination and recorded data. If the record is not on file, the destination and data element fields will be displayed. See figure 2 below.

(5) To add data, key in the data per appendix B-275 and depress the ENTER key. The updated panel will be displayed. Five sets of data may be entered per destination.

(6) To change data, overlay the data to be changed and depress the ENTER key. The updated panel will be displayed.

(7) To delete data, enter zeros or blanks in the Voyage Number field and depress the ENTER key to delete a complete line. The updated panel will be displayed with subsequent lines rotated upward in Sailing Date sequence.

(8) To access another destination record, move the cursor to the upper Destination field, enter the desired code and depress the ENTER key.

(9) To access another processing section, move the cursor to the Section Code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID DATA	Probable Cause: Data entered is invalid per appendix B-275. Action: Determine the error and reenter correct data.
BAD RETURN FROM UWTT05 XXXXXXX	Probable Cause: A system error has been encountered. Action: Record the message and notify supervisor.
NON-NUMERIC DATA IN FIELD	Probable Cause: Special characters were entered in numeric data fields. Action: Reenter numeric data in pertinent fields.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART C
UPDATE LOAD RECORD WITH MTMC DATA

1. PURPOSE

This procedure describes the maintenance activities necessary to update the in-process load record with MTMC release data as a result of data not being available at the time the SEAVAN load was released.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9.

b. Appendix B-278.

c. Appendix D-197.

d. Appendix F-213.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) This procedure provides instructions for accomplishing updates to the in-process load file.

(2) The SEAVAN Equipment/MTMC Release Missing Data Report, F-213, notifies Transportation personnel of the requirement to provide this information.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code IP and depress the ENTER key.

(3) The panel for file maintaining MTMC Release Data will be displayed. See figure 1 below.

(4) To add, change or delete data, key in the desired load number and depress the Enter key. If the record is on file, the screen will display the load number and recorded data. If the record is not on file, the load number and data element fields will be displayed.

(5) To add data, key in the data per appendix B-278 and depress the ENTER key. The updated panel will be displayed.

(6) To change data, overlay the data to be changed and depress the ENTER key. The updated panel will be displayed.

(7) To delete data, blank out the data to be deleted and depress the ENTER key. The updated panel will be displayed.

(8) To access another load number, move the cursor the the upper Load Number field, enter the desired code and depress the ENTER key.

(9) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGE/ACTION

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
NO RECORD FOUND	Probable Cause: Load Number entered is not on record.
	Action: Enter valid, recorded Load Number.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART D
EQUIPMENT POOL

1. PURPOSE

This procedure describes the maintenance activities necessary to update or inquire the SEAVAN Equipment Pool File.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9.

b. Appendix B-276.

c. Appendix D-195.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing all SEAVAN Equipment Pool File maintenance.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A to initialize the program.

(2) Key in Section Code EP and depress the ENTER key.

(3) The panel for file maintaining Equipment Pool Data will be displayed. See figure 1 below.

(4) To add data, key in Transaction Code VD data per appendix B-276 and depress ENTER key.

(5) To change data, key in Transaction Code VD, SEAVAN number, owner, size and type, if necessary, and make applicable changes to cube, location and carrier.

(6) To delete data, key in Transaction Code VE, SEAVAN number and owner, and depress the ENTER key.

(7) To inquire individual SEAVAN, key in Transaction Code VF, SEAVAN number and owner, and depress the ENTER key. The data will be displayed.

(8) To inquire entire file, key in Transaction Code VF, zeros in SEAVAN number field and depress ENTER key. The first record panel will be displayed by owner, size and type. Depress the Enter key to view succeeding records, if applicable. When the last record is displayed, a REVIEW COMPLETE message will be displayed.

(9) To process another transaction, move the cursor to the Section Code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE	Probable Cause: An Action Code other than VD, VE or VF was entered. Action: Enter VD to add or change data, VE to delete data, or VF to inquire records.
INVALID DATA	Probable Cause: Data entered is not valid. Action: Determine the error and reenter correct data.
ENTRY WAS SUCCESSFUL	Probable Cause: Self-explanatory. Action: Continue processing.
REVIEW COMPLETE	Probable Cause: The last record was displayed when the entire file inquiry was made. Action: Continue processing.
XREF RCD NOT FOUND	Probable Cause: An inquiry action was made against an unrecorded SEAVAN number. Action: Determine the error and reenter correct data.
SIZE AND TYPE MAY NOT BE CHANGED	Probable Cause: Self-explanatory. Action: Only cube, location and carrier fields may be changed.
NO INDEX RCD FOUND ON FIRST SEARCH	Probable Cause: An inquiry action with zeros in the Van Number field was made against an empty file. Action: No action necessary. Vans must be added to the file before an inquiry can be made.

ERROR MESSAGE	CAUSE/ACTION
NO OWNER RCD FOUND ON FIRST SEARCH	Probable Cause: Data is on the index record but not on the pool file. Action Cause: Print the message and notify the system manager.
OWNER RCD NOT FOUND	Probable Cause: Data is on the cross-reference file but not on the pool file. Action: Print the message and notify the system manager.
SEAVAN NUMBER NOT ON OWNER RCD	Probable Cause: Data is on the index record but not on the pool file. Action: Print the message and notify the system manager.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART E
WORKLOAD REQUEST BY
DESTINATION OR DOCUMENT NUMBER

1. PURPOSE

This procedure describes the maintenance activities necessary to request workload release by either destination, booking group or document number/suffix.

2. APPENDICES USED IN THIS PROCEDURE

a. Chapter 9.

b. Appendix B-257.

c. Appendix B-258.

d. Appendix D-192.

e. Appendix F-210.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

(1) This procedure provides instructions to request workload release by destination or booking group; or to force plan loads by altering the load accumulation key as a result of reviewing the SEAVAN Load Plan Report, F-210, and determining the number of loads to release for shipment.

(2) This procedure also provides instructions to request workload release by individual MRO. When this transaction causes release of an MRO, the MRO is assigned 0000 as the SEAVAN load number. It may be added to a SEAVAN load or shipped via another mode of transportation.

(3) Workload Transactions by Destination are kept on file until the next scheduled processing of the SEAVAN Workload Release Program and may be altered any time prior to release. Workload Releases by Document Number update the MRO file and cause release of the MRO in the next scheduled processing of the Workload Release Program.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code WR and depress the ENTER key.

(3) The panel for file maintaining Workload Request Data will be displayed. See figure 1 below.

(4) Workload Request by Destination or booking group.

(a) To inquire, add, change or delete data, key in the desired destination code and depress the ENTER key. If the record is on file, the screen will display the destination and recorded data. If there is no record on file, the destination and data element fields will be displayed.

(b) To add data, key in the data per appendix B-257 and depress the ENTER key. The updated panel will be displayed. Five sets of data may be entered per destination or booking group.

(c) To change data, overlay the data to be changed and depress the ENTER key. The updated panel will be displayed.

(d) To delete data, enter zeros in the MDD to delete a complete line and depress the ENTER key. The updated panel will be displayed.

(5) Workload Request by Document Number/Suffix.

(a) Move the cursor up to the Document Number field, enter data per appendix B-258 and depress the ENTER key.

(b) A successful entry will return the message MRO FILE UPDATED.

(6) To access another processing section, move the cursor to the Section Code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID DATA	Probable Cause: Data entered is invalid.
	Action: Determine the error and reenter correct data.
MRO RECORD NOT FOUND	Probable Cause: Incorrect or unrecorded MRO document.
	Action: Determine the error and reenter correct data.
MRO FILE UPDATED	Probable Cause: Request by document number successful.
	Action: Continue processing.

ERROR MESSAGE	CAUSE/ACTION
LOAD NOT EQUAL NINES	Probable Cause: Request for document number release for a particular MRO has previously been accomplished or MRO has already been documented. Action: Continue processing.
SU STATUS NOT EQUAL SPACE, OR T	Probable Cause: The MRO has been released. Action: Continue processing by requesting another MRO.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART F
LOAD EXCEPTION PROCESSING

1. PURPOSE

This procedure describes the maintenance activities necessary to:

a. Request additional MROs to complete a SEAVAN load which is in process.

b. Remove a line item from a configured Shipment Unit (SU).

c. Partial a line item.

d. Remove an SU from a load and add the SU to a load being assigned for the same destination.

e. Return an SU to the SEAVAN Workload Bank.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9

b. Appendix B-256

c. Appendix B-273

d. Appendix B-279

e. Appendix D-192

f. Appendix D-197

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T

4. PROCEDURES/INSTRUCTIONS

a. General

This procedure provides instructions for accomplishing all Load Exception Processing Maintenance described in paragraphs 1a through e above.

b. CRT Initialization

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code PR and depress the ENTER key.

(3) The panel for file maintaining Load Exception Processing Data will be displayed. See figure 1 below.

(4) Workload request for additional MROs for in-process loads, Transaction Code DS. Key in data per appendix B-256 and depress the ENTER key. This transaction is also used to reprint MROs as necessary. To reprint enter only Load Number and Exception Code 2.

(5) Removal of LI from Configured SU.

(a) Move the cursor to Transaction Code VU. Key in data per appendix B-279 and depress the ENTER key.

(b) This input will single line the line item and change the assigned load number to 0000. Action must then be taken to confirm the shipment if shipped by other than SEAVAN, assign a new SEAVAN Load Number or return the shipment to the SEAVAN Shipment Planning Function.

(6) Partialling a Line Item.

(a) Move the cursor to Transaction Code VV. Key in data per appendix B-279 and depress the ENTER key.

(b) The line item must have been previously single lined from the SU to accomplish partialling.

(c) The program will determine and assign the appropriate Partial Number.

(7) Removal of SU from Configured Load.

(a) Move the cursor to Transaction Code DY. Key in the data per appendix B-273 and depress the ENTER key.

(b) When an SU cannot be loaded in the initially scheduled van, the SU may be directed back to the MRO bank for planning into a following load, reference appendix B-279, Transaction Code VW. When the revised Load Number is left blank, Load Number 0000 will be assigned until further input is accomplished.

(8) Return an SU to the SEAVAN Workload Bank. Move the cursor to Transaction Code VW. Key in the data per appendix B-279 and depress the ENTER key.

(9) To access another processing section, move the cursor to the Section Code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
PRECEDENCE CODE NOT 1, 2, 3, 4 OR BLANK	Probable Cause: Precedence Code other than 1, 2, 3 or blank, entered. Action: Enter Precedence Code 1, 2, 3 or blank, as applicable.
WGT-CUBE NOT WITHIN UPPER/LOWER LIMITS	Probable Cause: Weight and/or cube not within validation parameters and exception indicator was left zero. Action: Enter 1 in Exception Indicator if weight/cube entered is correct. This will bypass parameters.
ADDITIONAL MRO NOT FOUND	Probable Cause: All available MROs have been utilized. There are no more available MROs to satisfy weight and cube parameters. Action: No further action necessary.
LOAD RECORD NOT FOUND	Probable Cause: The load number entered does not match a record in the Load File or was input incorrectly. Action: If input incorrectly, reenter correct load number.
DESTINATION MUST BE ENTERED	Probable Cause: Additional workload was requested for a stop-off van and the destination field was left blank. Action: Enter destination in field.
DESTINATION MUST NOT BE ENTERED	Probable Cause: Additional workload was requested for a single destination van and destination was entered. Action: Blank out destination field.
PLANNED LOAD RECORD NOT FOUND	Probable Cause: No available MROs for the specified precedence. Action: No action can be taken until additional MROs are received from DPSC.
UNSATISFIED WORK REQUEST, ALL MROS USED	Probable Cause: The weight and cube entered could not be met because all MROs had been used. The amount of weight and cube that shows on the display was unsatisfied. Action: None.

ERROR MESSAGE	CAUSE/ACTION
BAD RETURN FROM UWTTXX XXXXXXXX	Probable Cause: A system error has been encountered. Action: Record the message and notify supervisor.
INVALID DATA	Probable Cause: Transaction Code VU - Nonnumeric lines entered. Transaction Code VV - Nonnumeric quantity entered. Transaction Code VW - Invalid entries for SRC, TC, COMP, STOP, WGT and CUBE. Action: Enter valid data per appendix B-279.
INVALID QUANTITY	Probable Cause: Transaction Code VV - Quantity entered is greater than the quantity open. Action: Enter correct quantity to be partialled.
INVALID SINGLE LINE ACTION	Probable Cause: The shipment unit has only one line. Action: No action necessary. Proceed to next transaction.
LINE ALREADY SINGLE LINED	Probable Cause: Transaction Code VU - The line item record has previously been flagged as single lined. Action: No action necessary. Proceed to next transaction.
PARTIAL LINE NOT SINGLE LINED	Probable Cause: Transaction Code VV - The line is not single lined or not the only line of a shipment unit. Action: Single line the SU by utilizing Transaction Code VU, then partial the line item.
SU RECORD NOT ELIGIBLE FOR WORKLOAD BANK	Probable Cause: Transaction Code VW - The SU is assigned to a load other than 0000. Action: If SU should be replanned, remove from existing load using a DY transaction.
SU NOT ASSIGNED TO THIS LOAD	Probable Cause: Transaction Code DY - Incorrect load or SU number was entered. Action: Review document and reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
LINE ITEM RECORD NOT FOUND	Probable Cause: Transaction Codes VU, VV and VW - Incorrect SU/LI number entered. Action: Review document and reenter correct data.
SU NOT ELIGIBLE FOR REMOVAL	Probable Cause: Transaction Code DY - Tried to remove a 13-position SU for which the TCMD and Consist have been printed. Action: Remove another SU.
NO MROS FOUND TO REPRINT	Probable Cause: Transaction Code DS - Incorrect load number was entered. Action: Review document and reenter correct data.
NOT ELIGIBLE FOR BANK DUPE ACTION	Probable Cause: Transaction Code VW - A previous partial is already being replanned. Action: Wait until the other partial is released.
INVALID ACTION LOAD CLOSED	Probable Cause: Attempting to process a transaction against a Load which has had the TCMD/Consist printed.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART G
SU OFFER AND MRO ADJUSTMENT

1. PURPOSE

This procedure describes the maintenance activities necessary to:

a. Report the overshipment of an MRO due to item packaging characteristics.

b. Enter a complete or partial MRO cancellation.

c. Report the undershipment of an MRO due to item packaging characteristics.

d. Accomplish a denial (warehouse refusal) when insufficient or no stock, in the requested quantity, is available for shipment.

e. Enter a denial for a medically controlled substance that requires an export permit when the exact quantity is not available in support of a FMS shipment.

f. Flag an MRO that has a value less than $200 (A5_ only) to prevent notification to the DSC that cancellation action will not be effected.

g. Process an offer to Transportation by SU (Shipment Unit) to record the date available and receive DD Form 1387, Military Shipment Label, via an on-line printer.

2. APPENDICES USED IN THIS PROCESS:

a. Chapter 9.

b. Appendix B-259.

c. Appendix B-260.

d. Appendix B-261.

e. Appendix B-262.

f. Appendix B-263.

g. Appendix B-264.

h. Appendix B-265.

i. Appendix C-58.

j. Appendix D-197.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing all SU Offer and MRO Adjustment maintenance described in paragraphs 1a through 1g above.

b. CRT Initialization.

(1) Refer to appendix E038P, part A, to initialize the program.

(2) Key in Section Code AD and depress the ENTER key.

(3) The panel for file maintaining SU Offer and MRO Adjustment data will be displayed. See figure 1 below.

(4) To report the overshipment of an MRO due to item packaging characteristics key in Transaction Code DB data per appendix B-264 and depress the ENTER key. Up to eight entries may be input. See note below.

(5) To enter a complete or partial MRO cancellation (with the exception of FMS, entries are restricted to those MROs for which an AC6 cancellation request has been received from the DSC) key in Transaction Code DC data per appendix B-260 and depress ENTER key. Up to eight entries may be input. See note below.

(6) To report the undershipment of an MRO due to item packaging characteristics (restricted to DLA-managed materiel only) key in Transaction Code DD data per appendix B-265 and depress the ENTER key. Up to eight entries may be input. See note below.

(7) Denial due to materiel not available in the type pack specified by the MRO (Subsistence only). Key in Transaction Code DE data per appendix B-262 and depress the ENTER key. Up to eight entries may be input. See note below.

(8) Denial due to materiel location found to be misidentified (assets are not available to satisfy MRO with requested NSN). Key in Transaction Code DG data per appendix B-262 and depress the ENTER key. Up to eight entries may be input. See note below.

(9) Denial due to materiel not available which has the required shelf life as specified by the MRO. Key in Transaction Code DJ data per appendix B-262 and depress the ENTER key. Up to eight entries may be input. See note below.

(10) Denial due to materiel in location found to be in a condition other than the condition requested by the MRO. Key in Transaction Code DK data per appendix B-262 and depress the ENTER key. Up to eight entries may be input. See note below.

(11) Denial due to materiel not available in one continuous length as specified by Advice Code 2N in the MRO. Key in Transaction Code DM data per appendix B-262 and depress the ENTER key. Up to eight entries may be input. See note below.

(12) Denial due to insufficient or no materiel available in the quantity or condition as specified by the MRO. Key in Transaction Code DT data per appendix B-262 and depress the ENTER key. Up to eight entries may be input. See note below.

(13) To enter a denial for a medically controlled subsistence that requires an export permit when the exact quantity is not available in support of a FMS shipment. Key in Transaction Code DL data per appendix B-261, and depress the ENTER key. Up to eight entries may be input. (See note below.)

(14) To flag an MRO that has a value less than $200 to prevent notification to the DSC that cancellation action will not be effected:

(a) Move the cursor to Transaction Code DX.

(b) Enter the data per appendix B-263 and depress the ENTER key. Up to three entries may be input. (See note below.) Following this function, the MRO will be appended with a cancellation pending quantity upon receipt of the AC6. Processes outlined in appendix B-262, Transaction Code DC should then be followed.

(15) To enter a Date Offered to Transportation by Shipment Unit:

(a) Move the cursor to Transaction Code DF.

(b) Enter the data per appendix B-259 and depress the ENTER key.

(c) The Override Indicator is to provide a check in the event a 7-position SU was entered when an 11-position SU should have been entered.

This action results in the output of DD Form 1387-1, Military Shipment Label.

(16) To access another processing section, move the cursor to the Section Code field, enter the desired code and depress the ENTER key.

NOTE: If an incorrect input is made, for example, in the third entry, the first two entries will have been successful and be deleted from the screen after the ENTER key is depressed. The third entry will be automatically moved to the first position for reentry.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE	Probable Cause: A transaction code other than those identified on the panel was entered. Action: Enter valid transaction code relative to SU Offer and MRO Adjustment; DB, DC, DD, DE, DF, DG, DJ, DK, DL, DM, DT or DX.
INVALID CHECK DIGIT	Probable Cause: An invalid SU check digit was entered. Action: Review document and enter correct check digit.
SU RECORD NOT FOUND	Probable Cause: The SU number entered was either input incorrectly or does not match a record in the SU File. Action: Review document to make sure number was input correctly. If not, reenter. If record is not on file, research to determine cause.
LI RECORD NOT FOUND	Probable Cause: The line item number was either input incorrectly or does not match a record in the SU/LI File. Action: Review document to make sure number was input correctly. If not, reenter.
ENTER SU	Probable Cause: A Shipment Unit number (mandatory entry) was not entered. Action: Enter SU number.
INVALID STATUS NOT = A OR P	Probable Cause: A Status Code other than A or P is in the SU Record. Action: Research to determine cause.
CANNOT OVERSHIP MANAGER S OR T	Probable Cause: An overshipment transaction (DB) was made against managers S or T. Action: Cannot overship against managers S or T.
CANC ALREADY MADE THIS DAY	Probable Cause: A cancellation transaction (DC) has already been made against this MRO this day. Action: If cancellation is necessary, wait until next day, or correct per appendix E-038 P, part H, SEAVAN Transaction Code DA.

ERROR MESSAGE	CAUSE/ACTION
INVALID DATE OFFERED	Probable Cause: The date offered is less than release date or greater than current date. Action: The date offered must be equal to or greater than the release date and equal to or less than the current date.
NO PENDING CANCELLATION QTY	Probable Cause: A cancellation transaction (DC) was made against an MRO with no pending cancellation quantity. Action: Cannot process a cancellation action.
ADJUST-QTY EXCEEDS CANCEL PENDING QTY	Probable Cause: The quantity to be adjusted or canceled is greater than the cancellation pending quantity. Action: Review and reenter correct quantity to be canceled.
SHIP QTY EXCEEDS QTY OPEN	Probable Cause: The quantity to be shipped is greater than the quantity open. Action: Review and reenter correct quantity to be shipped.
INVALID MRO NOT FMS	Probable Cause: A denial for medically controlled substance (DL) was made against a non-FMS document. Action: This transaction cannot be accomplished unless the MRO is an FMS shipment.
INVALID EXCEPTION ALREADY PROCESSED	Probable Cause: A transaction has already been previously taken against the document. Action: Either wait and reprocess the next day or process in accordance with appendix E-038 P, part H, Special Processing Transaction Code DA.
NR-LABEL GREATER THAN SU-PCS	Probable Cause: The number of labels exceeds the number of pieces. Action: Do not enter anything in the NR-LABEL field unless the number of labels required is less than the number of pieces.
SERVICE OWNED STOCK SHIP EXACT QTY	Probable Cause: Position 69 of MRO is other than C, E, G, I, M, S or T with Transaction Code DD. Action: Cannot undership; enter exact quant

ERROR MESSAGE	CAUSE/ACTION
INVALID HOLD CODE	Probable Cause: An entry other than alpha or blank was entered. Action: Input must be valid alpha (appendix A-21) or blank.
SU BEING RE-PLANNED	Probable Cause: Load number is 9999. Action: Cannot process until SU is released to a new load number.
INVALID QUANTITY	Probable Cause: Several violations will cause this message. Transactions DB, DC, DD, DE, DG, DJ, DK, DL, DM and DT pertain: a. Ship quantity plus adjusted quantity equals zero. b. Ship quantity plus adjusted quantity is greater than open quantity. c. Codes other than DC must have an adjusted quantity greater than zero. d. Codes DB and DD must have a ship quantity and adjusted quantity greater than zero. Action: Enter correct ship and adjusted quantities.
MANDATORY ENTRY	Probable Cause: Transaction Code DF must have valid entries in SU Weight, Cube, Pieces and Type Pack fields. Action: Enter valid data for above fields.
SHIP-QTY ENTERED LESS THAN QTY-OPEN	Probable Cause: Transaction Code DB. Tried to overship a quantity less than the quantity open. May have entered wrong transaction code. Action: Research and enter correct transaction code or correct quantities.
OPEN-QTY PLUS ADJUST-QTY NOT = SHIP-QTY	Probable Cause: Transaction Code DB. The quantity entered as an overshipment plus the open quantity does not equal ship quantity. Action: Research and enter correct quantity overshipped.

ERROR MESSAGE	CAUSE/ACTION
OPEN-QTY MINUS ADJUST-QTY NOT = SHIP-QTY	Probable Cause: Transaction Code DD. The open quantity minus the quantity entered as an undershipment does not equal ship quantity. Action: Research and enter correct quantity undershipped.
MRO RECORD NOT FOUND	Probable Cause: Transaction Code DX. The document number entered was probably input incorrectly. Action: Review document and input correct document number.
INVALID MRO PENDING CANCELLATION	Probable Cause: Transaction Code DX. The MRO is already flagged for cancellation. Action: No action necessary. Proceed to next transaction.
SU HAS BEEN OFFERED	Probable Cause: Transaction Code DF. The SU has a offer date present. Action: Ensure that the SU was entered correctly. If SU is to be reoffered enter Y in the override IND and depress ENTER key.
QTY SHIPPED MUST BE GREATER THAN ZERO	Probable Cause: Quantity entered for quantity shipped is zero for Action Code DD (undershipment). Action: Quantity must be greater than zero.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART H
SPECIAL PROCESSING

1. PURPOSE

This procedure describes the maintenance activities necessary to:

a. Remove an MRO from further automated processing.

b. Reject an MRO because the Required Delivery Date cannot be met.

c. Force Close an MRO which has been partially canceled.

d. Force Close an MRO.

e. Change data elements that have already been established in the In-Process File.

f. Confirm MROs shipped outside the SEAVAN process.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9.

b. Appendix B-266.

c. Appendix B-267.

d. Appendix B-268.

e. Appendix B-269.

f. Appendix B-270.

g. Appendix B-272.

h. Appendix D-197.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing all Special Processing maintenance described in paragraphs 1a through f.

b. CRT Initialization:

(1) Refer to appendix E-038P, part A, to initialize the program.

(2) Key in Section Code SP and depress the ENTER key.

(3) The panel for file maintaining Special Processing Data will be displayed. See figure 1 below.

(4) To remove an MRO from further automated processing:

(a) Key in Transaction Code DP data per appendix B-266 and depress ENTER key.

(b) Once effected, all further processing requirements must be accomplished manually as the record will be removed from the In-Process File and placed in the History File.

(5) To reject a MRO because the Required Delivery Data cannot be met, key in Transaction Code DQ data per appendix B-267 and depress the ENTER key.

(6) To force close an MRO which has been partially canceled:

(a) Key in Transaction Code DU data per appendix B-268 and depress the ENTER key.

(b) The canceled quantity must be processed per appendix B-260, Transaction Code DC, processing section AD.

(7) To force close an MRO:

(a) Key in Transaction Code DW data per appendix B-269 and depress ENTER key.

(b) This action removes the MRO from the In-Process File and records the action in the history record. No quantity adjustments are permitted.

(8) To change data elements that have already been established in the In-Process File. These data elements are restricted to pieces, weight, cube, transportation hold code and date offered to transportation. Changes to denial, cancellation, offered and ship quantities are restricted to the initial processing day only.

(a) Key in Transaction Code DA data per appendix B-270 and depress the ENTER key.

(b) The cursor must be moved from the first data element line to the optional entry line for additional data required for DA transactions.

(9) To confirm SEAVAN MROs shipped outside the SEAVAN process:

(a) Shipment processing of SEAVAN MROs by modes other than SEAVAN must be completed manually; however, all confirmation actions must be processed against the SEAVAN In-Process File. The shipment must have been removed from a planned load via appendix B-273 or appendix B-279.

(b) Key in Transaction Code DH data per appendix B-272 and depress the ENTER key.

(c) The cursor must be moved from the first data element line to the optional entry line for additional data required for DH transactions.

(10) To access another processing section, move the cursor to the section code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGES/ACTION

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
QTY ENTERED NOT EQUAL OPEN QTY	Probable Cause: Transaction Code DU. Quantity force closed does not equal open quantity. Action: Review and reenter correct quantity.
INVALID CHECK DIGIT	Probable Cause: An invalid check digit for the SU number was entered. Action: Review document and enter correct check digit.
INVALID STC	Probable Cause: A Transaction Code other than DA, DH, DP, DQ, DU or DW was entered. Action: Enter valid Transaction Code relative to Special Processing.
SU RECORD NOT FOUND	Probable Cause: The shipment unit number entered does not match a record in the SU File or was input incorrectly. Action: If input incorrectly, reenter correct number; otherwise, research to determine if additional action is required.

ERROR MESSAGE	CAUSE/ACTION
LI RECORD NOT FOUND	Probable Cause: The line item number entered for the Shipment Unit does not match a line item record or was input incorrectly. Action: If input incorrectly, reenter; otherwise, research to determine if additional action is required.
INVALID DATA	Probable Cause: A line item number was not entered on Transaction Codes DA, DP, DQ, DU or DW. Action: Enter line item number involving above codes.
INVALID ACTION SU STATUS Z	Probable Cause: An action was taken against a record with an SU status Z (MRO has been confirmed for shipment or force closed). Action: Research to determine if additional action is required.
INVALID ACTION PROCESSING IS DISCONTINUED	Probable Cause: Transaction Codes DP, DQ, DU or DW was entered against a record that has already had a cancellation or denial transaction against it during the current processing day. Action: If necessary, correct by inputting data per Transaction Code DA or wait until following day to process DP, DQ, DU or DW.
INVALID DENIAL STC	Probable Cause: A denial action other than DE, DG, DJ, DK, DL, DM or DT was entered for Transaction Code DA. Action: Enter valid denial transaction as indicated above.
INVALID ACTION LOAD NUMBER NOT 0000	Probable Cause: An action was taken against a MRO/SU with a load number other than all zeros (STC DP, DQ,DU, DQ or DH). Action: MRO must be removed from the in process load before action can be taken.
INVALID GBL DATE	Probable Cause: Transaction Code DH. A GBL date greater than current date was entered. Action: Enter date equal to or less than current date.

ERROR MESSAGE	CAUSE/ACTION
INVALID HOLD CODE	Probable Cause: An entry other than alpha or blank was entered. Action: Input must be a valid alpha character per appendix A-21 or blank.
INVALID TCN	Probable Cause: Imbedded blanks were entered in the TCN field. Action: If TCN is entered, no imbedded blanks should be entered.
INVALID MODE	Probable Cause: An entry other than alpha or blank was entered. Action: Input must be a valid alpha character except Mode V per appendix A-17.
SU BEING PLANNED	Probable Cause: Load number equals 9s. Action: Cannot process until the SU is released to a new load number.
MRO EXCEPTION QTY ZERO	Probable Cause: No previous denials have been made against this particular MRO. Action: Research to determine cause.
QTY DENIED EQUAL MRO EXCEPTION QTY	Probable Cause: The quantity denied is equal to the exception quantity in the MRO record. Action: The quantity to be denied must be larger or smaller than the MRO exception quantity for a DA correction transaction.
MRO CANCELLED QTY ZERO	Probable Cause: No previous cancellations have been made against this particular MRO. Action: Research to determine cause.
QTY CANCELLED EQUAL MRO CANCELLED QTY	Probable Cause: The quantity canceled is equal to the canceled quantity in the MRO record. Action: The quantity to be canceled must be larger or smaller than the MRO exception quantity for a DA exception transaction.

ERROR MESSAGE	CAUSE/ACTION
TOTAL INPUT QTYS GREATER THAN MRO QTYS	Probable Cause: Quantity offered plus quantity denied plus quantity canceled is greater than the quantities in the MRO record. Action: Research and input correct quantities.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART I
REVIEW/CLOSEOUT

1. PURPOSE

This procedure describes the maintenance activities necessary to update erroneous or missing data which is necessary to print the SEAVAN TCMD Listing, F-211, and, if required, the SEAVAN Consist, F-62.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9.

b. Appendix B-274.

c. Appendix D-197.

d. Appendix F-62.

e. Appendix F-211.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing all SEAVAN Review/Closeout maintenance.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code RL and depress the ENTER key.

(3) The panel for file maintaining the SEAVAN TCMD/Consist Update/Print Request Data will be displayed. See figure 1 below.

(4) This procedure describes the actions to update erroneous or missing data which is necessary to print the SEAVAN TCMD Listing, F-211, and, if required, the SEAVAN Consist, F-62. This audit must be accomplished prior to requesting the SEAVAN TCMD/Consist Print, Transaction Code DV.

(a) Key in Transaction Code DZ, appropriate load number and depress the ENTER key.

(b) The computer will first display any MRO in the load pending cancellation. The operator must take action to indicate the canceled and shipped quantities using appendix B-260, Transaction Code DC. See figure 2 below.

(c) If no cancellations are pending the program will return a display of information contained in the computer record which is required to prepare SEAVAN TCMD (T_2) and Consist header data. If a single destination load is to be changed to a stop-off van, place a Y in the STOP-OFF-VAN indicator. Place the stop numbers desired in the STOP-NRS field. The stop entered must be entered in sequence. The stop number entered will be reflected as the ultimate consignee. Once a load has been indicated as a stop-off van it cannot be changed to a single destination van. Data update is accomplished by entering new data or keying over existing data in updatable fields per appendix B-274. When the ENTER key is depressed, the program will reject as invalid data any field which is mandatory and nothing was entered. See figure 3 below.

(d) The computer will follow the load display with a display for each shipment unit on the load. This display contains data required to prepare Prime Shipment Unit Data TCMDs, T_4. If the load records indicates the load as a stop-off van, the stop number in the Shipment Unit record must match the stop number entered in the load record panel. Action will be the same as for the above display. See figure 4 below.

(e) If the Shipment Unit is DICOMSS, each line which does not contain an item description will be displayed. The operator must enter the item description. The SU/LI number will be provided by the program and is not updatable. See figure 5 below.

(f) After all load data recorded in the computer has been displayed, an output will be provided which will allow establishment of a non-MILSTRIP TCN. This is to allow recording of non-MILSTRIP data and inclusion on the SEAVAN TCMD/Consist listings. Entry of data on this display will record the Shipment Unit in the load and increase piece, weight and cube totals appropriately. This display will continue to return until a completion code is entered. A Completion Code of C will indicate the audit is complete and action will be taken later using Transaction Code DV, SEAVAN TCMD/Consist Preparation. Loads may be reviewed again until the TCMD/Consist lists have been printed. See figure 6 below.

(5) To print SEAVAN TCMD/Consist and generate Advance Consist Message notifications, key in data per appendix B-274, Transaction Code DV, and depress the ENTER key. Reprint of F-62 Consist data may be accomplished the same day by repeating the entry with a Y in the field titled CONSIST-RPRNT. When CONSIST-RPRNT is left with an N in the field, both the F-62 Consist and F-162 Advance Consist are regenerated. Reprint actions do not generate additional TCMD data to the Water Clearance Authority.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE	Probable Cause: A Transaction Code other than DV or DZ was entered. Action: Enter DV to print the SEAVAN TCMD/Consist or DZ to update appropriate records.
RECORD NOT FOUND	Probable Cause: Transaction Code DZ. An incorrect load number was entered. Action: Reenter correct load number.
INVALID DATA	Probable Cause: Transaction Code DZ. A validation error has been encountered. Action: The cursor will automatically be set to the field in error. Review appendix B-274 and reenter valid data.
LOAD NOT ELIGIBLE FOR REVIEW	Probable Cause: Transaction Code DZ. An invalid load number was entered (0000 or 9999) or the load has already had the SEAVAN TCMD/Consist prepared. Action: Enter valid load number if 0000 or 9999 was entered in the load number field; otherwise, no action necessary if load has been released.
LOAD NOT REVIEWED	Probable Cause: Transaction Code DV. A Completion Code C was not entered for Transaction Code DZ. Action: Enter Completion Code C under Transaction Code DZ prior to requesting the SEAVAN TCMD/Consist, Transaction Code DV.
ENTER SEAL NO	Probable Cause: Transaction Code DV. Seal number was left zeros. Action: Enter valid seal number other than all zeros.
LOAD RECORD NOT FOUND	Probable Cause: Transaction Code DV. An incorrect load number was entered. Action: Reenter correct load number.

ERROR MESSAGE	CAUSE/ACTION
MANDATORY ENTRY	Probable Cause: Transaction Code DZ. Mandatory elements were left blank in the Load/SU records. Action: Enter valid data per appendix B-274.
NO LI RCD FOR SU	Probable Cause: Transaction Code DZ. No line item records were found for the SU. This is a system error. Action: Record the message and notify supervisor.
BAD RETURN FROM UWTTXX XXXXXXXX	Probable Cause: A system error has occured. Action: Record the message and notify supervisor.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART J
MRO INQUIRY/UPDATE

1. PURPOSE

This procedure describes the maintenance activities necessary to determine the status of a SEAVAN MRO. This transaction also provides for file maintenance of mandatory shipment planning data which was missing in MOWASP.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9.

b. Appendix B-255.

c. Appendix D-204.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing all SEAVAN MRO inquiries and updates.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code MG and depress the ENTER key.

(3) The panel for file maintaining MRO inquiry/update data will be displayed. See figure 1 below.

(4) MRO Inquiry:

(a) Key in Action Code (ACT) I and the document number. If the MRO has been partialed, enter the partial number in the PRTL field.

(b) Once the ENTER key is depressed a return display (see Figure 2 below) will appear with the MRO data.

(c) If another MG transaction is required, overlay the action code and document number fields at the first of the display with appropriate data and depress ENTER to get next display.

(5) MRO Update:

(a) Key in Action Code (ACT) U and the document number.

(b) Once the ENTER key is depressed a return display (see Figure 3 below) will appear with the MRO data.

(c) The highlighted data elements can now be updated with mandatory shipment planning data which was missing or incorrect. These updates may only be accomplished when the Status (ST) field in the display is blank with the following exception. When the Status (ST) field is other than Z, it is possible to change the data in the Water Commodity (WTR-COM) field. All other update attempts when the status is not blank will generate the error message RECORD NOT ELIGIBLE FOR UPDATE.

(d) Once the update is accomplished depress the ENTER key to update the record.

(e) If another MG transaction is required, overlay the action code and document number fields at the first of the display with appropriate data and depress ENTER to get next display.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE	Probable Cause: An action code other than VJ or VH was entered. Action: Enter either VJ for inquiry or VH for update actions.
RECORD NOT FOUND	Probable Cause: Incorrect or incomplete document number entered. Action: Determine error and reenter correct data.
INVALID DATA	Probable Cause: No decimal point (period) entered in MRO weight or cube for VH update actions. Action: Enter the decimal point in the tenth position of the Weight field or seventh position of the Cube field.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT ELIGIBLE FOR UPDATE	Probable Cause: An update action was attempted against an MRO that had already been released. Action: Continue processing.
WATER-COM MUST BE ALPHA POS 4	Probable Cause: The Water Commodity data entered does not have an alpha character in the fourth position of the code. Action: Correct the Water Commodity code data.
DEST MUST BE ALPHA/NUMERIC	Probable Cause: The DEST field is not alphanumeric filled. Action: Update DEST field with appropriate destination activity address code. Field must not contain blanks.
BKG MUST BE ALPHA/NUMERIC	Probable Cause: The BKG field is not alphanumeric filled. Action: Update BKG field with appropriate booking number data. Field cannot be updated with blanks.
PREC MUST BE 0-4	Probable Cause: The PREC field has been blanked or updated with an alpha character. Action: Update PREC field with precedence code 1, 2, 3 or 4. Field cannot be blank.
TC MUST BE ALPHA OR BLANK	Probable Cause: The T/C field contains a numeric character. Action: This field validation accepts either an alpha character or blank. Update field with the type cargo code applicable for the materiel being shipped.
COMP MUST BE ALPHA OR BLANK	Probable Cause: The COMP data entered contains a numeric character. Action: Update the compatibility code field with the code applicable to the shipment.
INVALID DATA	Probable Cause: The line weight or line cube entered does not contain a valid decimal value. Action: Assure the tenth position of the LINE-WGT field and the seventh position of the LINE-CBE field contain decimals.

ERROR MESSAGE	CAUSE/ACTION
WTR-COM MUST BE ALPHA/NUMERIC FILLED	Probable Cause: The Water Commodity field contains blanks. Action: Update WTR-COM field with corrected water commodity data.
UNIT PACK MUST BE GREATER THAN ZERO	Probable Cause: The unit pack field is zero filled. Action: Correct UNT-PK field to reflect a unit pack weight greater than zero.
LGC MUST BE ALPHA/NUMERIC FILLED	Probable Cause: The LGC field has been blanked. Action: Update the LGC field with appropriate location group code for the materiel to be shipped.
TIC MUST BE L, T, B OR SPACE	Probable Cause: The TIC field has been updated with other than the specified alpha characters or space. Action: Update the field with the type item code that applies to the shipment.
SRC MUST BE ALPHA/NUMERIC FILLED	Probable Cause: The SRC field contains blanks. Action: Update field with the special requirements code for the materiel being shipped.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART K
LOAD/SU/LI INQUIRY

1. PURPOSE

This procedure describes the maintenance activities necessary to inquire file data by Load, Shipment Unit, or Line Item. This process is to be used when detailed data pertaining to a shipment is needed to determine further processing requirements.

2. APPENDICES USED IN THE PROCESS

a. Chapter 9.

b. Appendix B-271.

c. Appendix D-197.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for inquiring file data by Load, Shipment Unit, or Line Item.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code MH and depress the ENTER key.

(3) The panel for inquiring Load, Shipment Unit, Line Item, or Create Load Record data will be displayed. See figure 1 below.

(4) Load Inquiry. Key in Action Code 1, Load Number and depress the ENTER key. Successful entry will provide Load data. See figure 2 below.

(5) SU Inquiry.

Key in Action Code 2, SU Number and depress the ENTER key. Successful entry will provide SU data. See figure 3 below.

(6) LI/Inquiry.

(a) Key in Action Code 3, SU and LI Number and depress the ENTER key. Successful entry will provide Line Item data. See figure 4 below.

(b) For additional line item information, MRO Document Number inquiry/ update may be accomplished per appendix E-038 P, part J.

(7) Create Load Record.

(a) Key in Action Code 4 and depress ENTER key. Successful entry will display input panel. See figure 5 below.

(b) When display is returned, key in Destination, Type Cargo Code, Compatibility Code, Van Size and depress ENTER key. Successful entry will provide a basic load data record. See figure 2 below.

(c) When the basic load is created Shipment Units can then be moved to the load through Section Code PR or Section Code TW can be used to move Shipment Units or TCNs to the new load. Section Code RL with Action Code DZ can be used to add non-MILSTRIP TCNs to the new load.

(d) If there are no Shipment Units or non-MILSTRIP TCNs assigned to the new load, when the next SEAVAN batch process is run the load record will be deleted.

(8) To access another processing section, move the cursor to the Section Code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGE/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE	Probable Cause: An Action Code other than 1, 2 or 3 was entered. Action: Enter either 1 for Load inquiry, 2 for SU inquiry or 3 for LI inquiry.
INVALID KEY	Probable Cause: A number other than a valid load number was entered for Action Code 01. Action: Enter valid load number for Action Code 01.
LOAD RECORD NOT FOUND	Probable Cause: An incorrect load number was entered. Action: Determine the error and reenter correct load number.

ERROR MESSAGE	CAUSE/ACTION
SU RECORD NOT FOUND	Probable Cause: An incorrect SU number was entered. Action: Determine the error and reenter correct SU number.
LI RECORD NOT FOUND	Probable Cause: An incorrect LI number was entered. Action: Determine the error and reenter correct SU/LI number.
MANDATORY ENTRY	Probable Cause: Data must be entered. Action: Enter data.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART L
TABLE AND CONTROL INQUIRY/UPDATE

1. PURPOSE

This procedure describes the maintenance activities necessary to:

a. Provide information concerning size, type and capacity of vans.

b. Identify Hazardous Type Cargo Codes which may be shipped in the same vans.

c. Maintain constants and controls in the SEAVAN System.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 9.

b. Appendix B-277.

c. Appendix B-282.

d. Appendix D-196.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing all Table and Control File Maintenance.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code TC and depress the ENTER key.

(3) The panel for File Maintaining Table and Control Data will be displayed. See figure 1 below.

(4) Table 01 - SEAVAN Capacity Table.

(a) Key in Update Code 01 and depress the ENTER key.

(b) The panel for maintaining the SEAVAN Capacity Table will be displayed. See figure 2 below.

(c) To add data, key in Transaction Code VK, data per appendix B-277 and depress the ENTER key. The data will be added to the table and displayed immediately to show the add action.

(d) To delete data, key in Transaction Code VL, Refrigeration Code, if applicable, van size and depress the ENTER key. The data will be deleted from the table and displayed immediately to show the delete action.

(5) Table 02, part 1 - Compatible Type Cargo Codes.

(a) Key in Update Code 02 and depress the ENTER key.

(b) The panel for maintaining the Hazardous Type Cargo Codes and Storage Compatibility Codes will be displayed. See figure 3 below.

(c) To add data key in data per appendix B-277 and depress the ENTER key. To change data, overlay displayed elements and depress the ENTER key.

(6) Table 03, - Constants and Controls.

(a) Key in Update Code 03 and depress the ENTER key.

(b) The panel for maintaining the Controls and Constants Table will be displayed. See figure 4 below.

(c) To add data, key in data per appendix B-277 and depress the ENTER key. To change data, overlay displayed elements and depress the ENTER key.

(7) Table 04 - Destinations Requiring SEAVAN Consist, F-62.

(a) Key in Update Code 04 and depress the ENTER key.

(b) The panel for maintaining non-DICOMSS destinations that desire a printed and/or Joint Message Format SEAVAN Consist will be displayed. See figure 5 below.

(c) To add or change data, key in Transaction Code VK data per appendix B-277 and depress the ENTER key.

(d) To delete data, key in Transaction Code VL, the destination to be deleted, and depress the ENTER key.

(8) Table 05 - Project Codes that need Special Handling.

(a) Key in Update Code 05 and depress the ENTER key.

(b) The panel for maintaining Project Codes that need special handling will be displayed.

(c) To add data, key in Transaction Code VK data per appendix B-277 and depress the ENTER key. The data will be added to the table and displayed immediately to show project add action.

(d) To delete data, key in Transaction Code VL, Project Code to be deleted and depress the ENTER key. The data will be deleted from the table.

(9) To access one table to another, move the cursor to the Section Code field, enter XX and depress the ENTER key. This action will bring back the display showing all Section Codes. Enter TC and depress the ENTER key to display figure 1 again. Enter the Update Code to display the desired table.

(10) To access another processing section, move the cursor to the Section Code field, enter the desired code and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID UPDATE CODE	Probable Cause: An Update Code other than 01, 02, 03 or 90 was entered. Action: Enter Update Code as displayed to access desired table.
INVALID ACTION CODE	Probable Cause: An Action Code other than VK or VL was entered. Action: Enter Action Code VK to add or VL to delete data.
BAD RETURN FROM UWRR40	Probable Cause: A system error has been encountered. Action: Record the message and notify supervisor.
TABLE NOT FOUND	Probable Cause: An accessing error has occurred. Action: Record the message and notify supervisor.
REFRIG CODE MUST BE R OR BLANK	Probable Cause: Refrigeration Code entered was other than R or blank. Action: Enter R if applicable; otherwise, leave blank.
MANDATORY ENTRY	Probable Cause: Van size field has no entry. Action: Enter appropriate van size.
NET WEIGHT NOT ENTERED	Probable Cause: Self-explanatory. Action: Enter net weight for applicable van.

ERROR MESSAGE	CAUSE/ACTION
NET CUBE NOT ENTERED	Probable Cause: Self-explanatory. Action: Enter net cube for applicable van.
CAPACITY TABLE FULL - REC NOT ADDED	Probable Cause: Maximum entries to capacity table has been reached. Action: If necessary, a record may be deleted and the desired record added.
CAPACITY TABLE EMPTY - ACTION NOT ALLOWED	Probable Cause: A delete action was entered against an Empty Capacity Table. Action: Only add actions are allowed against an empty table.
RECORD NOT ON TABLE	Probable Cause: A delete action was taken against a record not on file in the Capacity Table. Action: Determine the error and reenter correct data.
DUPLICATE RECORD ON FILE	Probable Cause: An add action was taken for a duplicate record. Action: Determine the error and reenter correct data.
INVALID TYPE CARGO CODE	Probable Cause: An invalid type Cargo Code was entered. Action: Enter valid code. Must be alpha, excluding Z.
ADD NOT ALLOWED - CODE ON FILE	Probable Cause: An add action was taken; however, the same Cargo Code was already on file. Action: Determine error and continue processing.
DEL NOT ALLOWED - NO CODE ONE FILE	Probable Cause: A delete action was taken against a Cargo Code which was not on file. Action: Determine error and continue processing.
CODE DELETED - TABLE NOW EMPTY	Probable Cause: The last code on file has been deleted. Action: Information message only, continue processing.

ERROR MESSAGE	CAUSE/ACTION
FIELD MUST BE GREATER THAN ZERO	Probable Cause: Self-explanatory. Action: The following fields must be greater than zero: SU Assembly Weight Limit SU Assembly Cube Limit SU Assembly Weight Limit TU Assembly Cube Limit

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART M
SEAVAN MIS

1. PURPOSE

This procedure provides the capability of initiating the SEAVAN MIS teleprocessing program.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-280.

b. Appendix D-202.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing inquiry for SEAVAN MIS data.

b. CRT Initialization.

(1) To initiate the program, key in $$UWTT01 and press the ENTER key. The CRT will be dedicated to this program until another $$ entry is made.

(2) This input will result in a display of SEAVAN Processing Section Codes. Select Section Mode MI for MIS processing.

(3) Enter the report number of the MIS report to be displayed (see figure 1 below) in the Next Report field.

(4) If no report number is entered the program will automatically display report 01 when the ENTER key is pressed. Each time the ENTER key is pressed the next report number will be increased by one until all reports have been seen.

5. ERROR MESSAGE/ACTION

If an error is made in requesting a report that is not in the MIS program, the cursor will return to the Report Number field with 01.

Figure 1

UWTT01 MIS REPORTS
SECTION CODE MI
REPORT NUMBER 01

REPORT NUMBERS ARE AS FOLLOWS

01 = MRO'S RECEIVED FOR SEAVAN
02 = MRO'S ON HAND FOR SEAVAN
03 = LOAD INFORMATION FOR SEAVAN
04 = WORKLOAD RELEASE FOR SEAVAN
05 = TRANSSHIPMENTS ON HAND
06 = LOAD PERFORMANCE DATA
07 = MRO PERFORMANCE FOR SEAVAN
08 = TRANSSHIPMENT PERFORMANCE FOR SEAVAN
09 = PROCESSING TIMES BY MRO BANK
10 = PROCESSING TIMES BY WAREHOUSE AND TERMINAL
11 = TOTAL DEPOT PROCESSING TIME (00 - 19)
12 = TOTAL DEPOT PROCESSING TIME (20 - 39+)
13 = DAYS MRO'S RCVD BEFORE RDD DCOMS (39+ - 20)
14 = DAYS MRO'S RCVD BEFORE RDD DCOMS (19 - 00)
15 = DICOMSS MRO'S BY CYCLE

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART N
MRO INQUIRY

1. PURPOSE

This procedure describes the maintenance activity necessary to inquire the MRO File. This process is to be used when detailed data from the MRO record is needed.

2. APPENDICES USED IN THIS PROCESS

None.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

CRT Initialization.

a. To initialize the program, key in $$UWTT91 and press the ENTER key. The CRT will be dedicated to this program until another $$ entry is made.

b. This input will result in a display with instructions for inquiry (see figure 1 below).

c. If MRO has been partialed, enter the partial number in the PRTL field.

d. Once the ENTER key is pressed a return display (see figure 2 below) will appear with the MRO data.

e. If another inquiry is required, enter an I in ACT field and document number of the MRO. Press the ENTER key.

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
INVALID ACTION CODE	Probable Cause: An Action Code other than I was entered. Action: Enter Action Code I.

ERROR MESSAGE	CAUSE/ACTION
RECORD NOT FOUND	Probable Cause: An invalid document number was entered. Action: Reenter correct document number.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART O
TRANSSHIPMENT TCMD/RECEIPT-INQUIRY/UPDATE

1. PURPOSE

This procedure describes the processes necessary to inquire, add, update, or delete TCMD data to the Transshipment File.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-281.

b. Appendix B-283.

c. Appendix B-284.

d. Appendix D-199.

e. Appendix D-200.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for accomplishing all SEAVAN Transshipment TCMD/Receipt Inquiries and Updates.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A, to initialize the program.

(2) Key in Section Code TR and depress the ENTER key.

(3) The panel for file maintaining SEAVAN Transshipment TCMD data will be displayed. See figure 1 below.

(4) Transshipment Inquiry.

(a) Enter blanks in Action Code, key in the desired TCN, and depress the ENTER key.

(b) A successful entry will display the Transshipment TCMD data. If the transshipment has been shipped, the transshipment data will be displayed beside the history column.

(5) Add Receipt Data.

(a) Enter Action Code AR and key in the desired TCN. Depress the ENTER key.

(b) A successful entry will display the input panel. Key in the receipt data and depress the ENTER key.

(c) A successful entry will be displayed in one of two ways. If TCMD data has not been received, the message "Receipt Data Added" will be displayed. If TCMD data has been received, the message "Update Complete - Release to Planning" will be displayed.

(6) Change Receipt Data.

(a) Enter Action Code CR and key in the desired TCN. Depress the ENTER key.

(b) A successful entry will display the receipt data. Key in the desired change and depress the ENTER key.

(c) If the TCMD data has not been received the message "Update Complete" will be displayed. If TCMD data is present the message "Update Complete - Released to Planning" will be displayed.

(7) Add TCMD Data.

(a) Enter Action Code AT and key in the desired TCN. Depress the ENTER key.

(b) A successful entry will display the TCMD input panel. Key in the TCMD data and depress the ENTER key.

(c) If receipt data has not been entered, the message "TCMD Data Added" will be displayed. If receipt data has been entered and there are no discrepancies in the TCMD data, the message "Update Complete - Released to Planning" will be displayed.

(8) Change TCMD Data.

(a) Enter Action Code CT and key in the desired TCN. Depress the ENTER key.

(b) A successful entry will display the TCMD data. Key in the desired change and depress the ENTER key.

(c) If the receipt data has not been input, the message "Update Complete" will be displayed. If the receipt data has been input, the message "Update Complete - Released to Planning" will be displayed.

(9) Delete TCMD from Transshipment File.

(a) Enter Action Code DR and key in the desired TCN. Depress the ENTER key.

(b) A successful entry will display the message "TCN Cancelled".

5. ERROR MESSAGES/ACTIONS

Messages will be displayed at the bottom of the panel. If an error is made, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
BAD RETURN FROM UWTT50 XXXXXXX	Probable Cause: A system error has been encountered. Action: Record the message and notify supervisor.
RECEIPT DATA PRESENT	Probable Cause: Self-explanatory. Action: None. Receipt data has been added for the TCN.
TCMD IN ERROR CORRECT	Probable Cause: An error was encountered because of bad data. Action: Enter the correct data.
RECORD NOT FOUND	Probable Cause: An inquiry or update change to a TCN that is not on the transshipment file. Action: Determine the error and reenter correct data.
TCMD DATA PRESENT	Probable Cause: Action Code AT was used, TCMD data was already added. Action: If TCMD data needs to be changed, use Action Code CT.
NO UPDATE TCMD SHIPPED	Probable Cause: Self-explanatory. Action: None.
INVALID ACTION TCN BEING PROCESSED	Probable Cause: An update to a TCN that has been released for processing. Action: Use SEAVAN system if change is required.
INVALID ACTION CODE	Probable Cause: Self-explanatory. Action: Reenter the correct Action Code.

best copy available

ERROR MESSAGE	CAUSE/ACTION
NO T-3 ESTABLISHED	Probable Cause: A TX4 or TJ4 was input prior to a TX3 or TJ3. Action: Enter TX3 or TJ3.
UPDATE COMPLETE PIECE COUNT DISCREPANCY	Probable Cause: Receipt pieces do not match TCMD pieces. Action: Correct the erroneous pieces.
INVALID DATA	Probable Cause: Self-explanatory. Action: Cursor will appear under the invalid data. Correct and reenter.
T4-NR MUST BE ZERO	Probable Cause: When T-1 is added, T4-NR must be zero. Action: Correct T4-NR and reenter.
T4-NR MUST BE GREATER THAN ZERO	Probable Cause: Zero was entered in T4 field when TX4 was being added. Action: Correct and reenter.
NUMBER OF SUS MUST BE ZERO	Probable Cause: Other than zeros were entered for a TX1 TCMD add. Action: Enter zeros in SUS and reenter.
SHOULD HAVE NO TJ6 DATA	Probable Cause: TJ6 data was entered with no TJ1 established. Action: If materiel is hazardous, establish a TJ1; if materiel is not hazardous, blank TJ6 data and reenter.
NEEDS TJ6 DATA	Probable Cause: TJ1 data has been entered but no TJ6 data. Action: Enter TJ6 data.
NEEDS TJ9 DATA	Probable Cause: Self-explanatory. Action: Enter TJ9 data.
NO UPDATE PIECE COUNT DISCREPANCY	Probable Cause: Change to TCMD piece count after TCN has been released to planning cut not in process. Action: Update receipt pieces.

ERROR MESSAGE	CAUSE/ACTION
UPDATE COMPLETE PCE CNT DISCREPANCY RCPT CNT USED	Probable Cause: TCMD data has been changed. Included in the change was pieces. The TCN is in process, TCMD data will be updated but pieces will not be updated. Action: To correct the TCN in process use Section Code AD with Action Code DF or Section Code RL and correct Shipment Unit pieces.
NUMBER OF SUS MUST BE GREATER THAN ONE	Probable Cause: TX3 was entered and NR-SUs field was less than one. Action: Enter the correct number of SUs. If only one SU, change DIC to TX1.
SHOULD HAVE NO TJ6 DATA	Probable Cause: A TJ6 was entered along with a TX1 or TX3. Action: A TJ6 is only entered with a TJ1. Correct and reenter.
NOT GREATER THAN ZERO	Probable Cause: Pieces, weight, or cube contains zeros. Action: Correct pieces, weight or cube to a quantity greater than zero.
TCMD ADDED - MISSING T-4 CORRECT	Probable Cause: This message will appear for entries of T-3 and T-4 until the number of SUs entered in the TX3 have been added. Action: Enter all TX4 or TJ4 TCMDs.
TCN INPROCESS	Probable Cause: A receipt change to a TCN that has been released to the In-Process File. Data will appear in the in-process column. Action: If a change to pieces, weight or cube is needed use Section Code AD with Action Code DF or Section Code RL to change the data.
TCMD CANCELLED	Probable Cause: A change has been processed to a TCMD that has been canceled. Action: If TCMD is to be processed and cancellation was made in error, add the TCMD to the Transshipment File. A cancellation and add cannot be made in the same day.

ERROR MESSAGE	CAUSE/ACTION
DUPE ON MRO FILE	Probable Cause: Dupe check is done on Document Number and Suffix. Action: If transshipment is a partial and the other partial is being processed before the second partial can be released to the SEAVAN MRO Bank, the first partial must be shipped.
SHOULD HAVE NO T-9 DATA	Probable Cause: A T-9 has been entered with a T-3 transaction. Action: Correct and reenter.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART P
TRANSSHIPMENT WORKLOAD RELEASE

1. PURPOSE

This procedure describes the processes necessary to release transshipment workload to specific loads.

2. APPENDICES USED IN THIS PROCESS

None.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

CRT Initialization

a. Refer to appendix E-038 P, part A, to initialize the program.

b. Key in Section Code TW and depress the ENTER key.

c. The panel for inputting release data for transshipment workload will be displayed. See figure 1 below.

d. Key the TCN desired into the TCN field. Key the Load-NR that TCN is to be loaded to. If the entire TCN is to be released, depress the ENTER key. If TCN is to partialled, enter a Y in the PRTL field, enter the pieces, weight and cube and depress the ENTER key.

5. ERROR MESSAGES/ACTION

Messages will be displayed at the bottom of the panel. If an error is made in the input, the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
ENTRY WAS SUCCESSFUL	Probable Cause: Self-explanatory.
	Action: Enter next transaction.
INVALID DATA	Probable Cause: Error on input data.
	Action: Reenter correct data.

ERROR MESSAGE	CAUSE/ACTION
LOAD RECORD NOT FOUND	Probable Cause: Self-explanatory. Action: Determine the error and continue processing.
MRO RECORD NOT FOUND	Probable Cause: Self-explanatory. Action: Determine the error and continue processing.
TABLE 2 NOT FOUND	Probable Cause: The table and control file is not on-line. Action: Record message and notify supervisor.
CANNOT ADD NEW SU OFLW RECORD	Probable Cause: A dupe Shipment Unit record is already on the file. Action: Record message and notify supervisor.
CANNOT ADD NEW LI OFLW RECORD	Probable Cause: A dupe Shipment Unit line record is already on the file. Action: Record message and notify supervisor.
WGT-CBE NOT WITHIN UPPER/LOWER LIMIT	Probable Cause: Weight or cube input is greater than MRO weight or cube. Action: Determine error and reenter correct data.
BAD RETURN FROM UWTT55-XXXXXXXX	Probable Cause: A system error has occurred. Action: Record message and notify supervisor.
INVALID ACTION LOAD CLOSED	Probable Cause: Self-explanatory. Action: Determine error and continue processing.
TCMD RECORD NOT FOUND	Probable Cause: TCMD data for transshipment has not been entered or an error has been made keying in the TCN. Action: Determine the error and continue processing.
INCORRECT STATUS, NOTIFY SYSTEM MANAGER	Probable Cause: System error. Action: Record message and notify supervisor.

ERROR MESSAGE	CAUSE/ACTION
TCN SHIPPED, STATUS CODE = Z	Probable Cause: Self-explanatory. Action: None.
TCN CANCELLED, STATUS CODE = C	Probable Cause: Self-explanatory. Action: Determine the error and continue processing.
MISSING RECEIPT, SUSPENSE CODE = C	Probable Cause: Self-explanatory. Action: If receipt data is available input the data using Section Code TR and continue processing.
PIECE COUNT DISCREPANCY, SUPENSE CODE = P	Probable Cause: Receipt piece count and TCMD piece count do not agree in transshipment file. Action: Correct transshipment file and continue processing.
INVALID TCMD DATA	Probable Cause: Self-explanatory. Action: Correct TCMD data in transshipment file.
TCN ALREADY INPROCESS SU XXXXXXXXXXXXX X LOAD XXXX	Probable Cause: Self-explanatory. Action: If TCN is desired on another load use SEAVAN Section Code PR.
MRO NOT TYPE 3	Probable Cause: The TCN entered is not a transshipment MRO. Action: Determine error and continue processing.
PARTIAL-QTY EXCEEDS QTY-OPEN	Probable Cause: Quantity request is greater than MRO quantity. Action: Determine error and continue processing.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART Q
TRANSSHIPMENT HISTORY INQUIRY

1. PURPOSE

This procedure describes the maintenance activities necessary to inquire the Transshipment History Data.

2. APPENDICES USED IN THE PROCESS

Appendix B-217.

3. RESPONSIBLE ORGANIZATION ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for inquiring Transshipment History Data by TCN.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A to initialize the program.

(2) Key in Section Code TH and depress the ENTER key.

(3) The panel for inquiry of the Transshipment History File will be displayed.

(4) Key in the TCN that is to be inquired.

(5) A successful entry will display the TCN History Data per appendix B-217.

(6) To inquire another TCN enter the appropriate TCN and depress the ENTER key.

5. ERROR MESSAGE/ACTIONS

Messages will be displayed at the bottom of the panel.

ERROR MESSAGE	CAUSE/ACTION
02 RECORD NOT FOUND	No matching TCN on file.

ERROR MESSAGE	CAUSE/ACTION
90 BAD RETURN FROM UWTT60 60 XX XX XX	Probable Cause: A system error has occurred. Action: Record the message and notify supervisor.

APPENDIX E-038 P

SEAVAN SHIPMENT PLANNING
PART R
LOAD/TCMD XREF INQUIRY

1. PURPOSE

This procedure describes the maintenance activities necessary to inquire the load/TCMD Cross-Reference File.

2. APPENDICES USED IN THE PROCESS

Appendix B-220.

3. RESPONSIBLE ORGANIZATION ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides instructions for inquirying load number to obtain all TCNs on that load.

b. CRT Initialization.

(1) Refer to appendix E-038 P, part A to initialize the program.

(2) Key in Section Code TX and depress the ENTER key.

(3) The panel for inquiry of the load/TCMD XREF will be displayed.

(4) Key in the load that is to be inquired.

(5) A successful entry will display the TCNs that were on the load record that was entered.

(6) To inquire another load record, enter the appropriate load number and depress the ENTER key.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
02 RECORD NOT FOUND	No matching load number of file.
90 BAD RETURN FROM UWTT65 XX XX XX	A system error has occurred, record the message and notify supervisor.

APPENDIX E-039 P

TRANSPORTATION UNIT SUMMARY LISTING

1. REPORT USED

Appendix F-39, Transportation Unit Summary Listing.

2. REASON FOR REVIEW

To provide a listing of Transportation Units which have been released to Storage Operations but are not ready to be offered to transportation. Data on the listing is to be reviewed for possible transportation releases.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Appendix F-39 will be reviewed by the Shipment Planning Branch for determining possible transportation release requirements.

4. PROCEDURES/INSTRUCTIONS FOR THE REVIEW OF THE REPORT

a. The Appendix F-39 report will be provided by the computer with every MRO processing cycle. The Shipment Planning Branch will review each Transportation Unit or Shipment Unit to determine if the unit may require a transportation release based on the Military Traffic Management Regulation, DLAR 4500.3, which basically states that releases are required on the following:

(1) Air shipments over 1,000 pounds.

(2) Surface shipments over 10,000 pounds.

(3) Oversize dimension items (fifth digit of water commodity code).

b. Appendix F-39 report is a summary analysis of Transportation Units and is designed for a review to determine possible releases. Detailed data required to obtain the release will be obtained from the Shipment Planning Worksheet, appendix F-79.

APPENDIX E-040 P

CARRIER PERFORMANCE INTRANSIT ANALYSIS (F-220)

1. PURPOSE

The Carrier Performance Intransit Analysis process provides detailed and summary reports (Appendix F-220) of transit times by destination, carrier, and mode. These reports facilitate the monitoring and evaluation of carrier and mode performance, and the selection of the mode and carrier that is most responsive to customer needs.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-1, Carrier Performance Update Card.

b. Appendix B-2, Carrier Performance Report Request Card.

c. Appendix B-66, Part K, MOFAST Table and Control, Table 11.

d. Appendix B-207, MOFAST Exception MRO Entry Format.

e. Appendix D-29, Part K, Special Project Table.

f. Appendix D-134, Processing Carrier Performance Report Request Cards.

g. Appendix D-135, Intransit Data Card Master File Build/Update.

h. Appendix E-234 P, Part A, Mail/TWX/Telephone Exception MRO Processing.

i. Appendix F-220, Carrier Performance Intransit Analysis Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. Carrier Performance Intransit Analysis Report.

(1) The five-part Carrier Performance Intransit Analysis Report is the product of DASC MILSTEP Intransit Tape and Carrier Performance Update Card processing. A reject listing of erroneous TK4, initial and correction input accompanies each print of the report. Appendix F-220 provides sample report formats with data element definitions for each part.

(2) The Carrier Performance Update Card entry (appendix B-1) allows the user to add, change and delete TK4 report data to the report. Recompilation of updated report statistics is accomplished by requesting reprint of the report, using appendix B-2 entry format, collectively or by part number, at any time during the months processing period.

b. Minimum Service Standard (MSS) Source.

(1) The transit times used by the Carrier Performance Intransit Analysis Report to measure carrier transit time performance are drawn from appendix B-66, part K, table 11, MOFAST Table and Control File.

(2) The table's SPLC, mode and transit time content is controlled and maintained by the user depot. The table has the capacity to indicate a transit time code for all applicable transportation modes into all six, four or two-position SPLC designators. This is accomplished by use of a zone method to identify mode sets and related transit time codes, appendix B-1.

c. Transit Time Calculation Source.

The F-220 listing draws intransit time data from the table used to calculate the GBL destination date, appendix B-66, part K, table 11, MOFAST Table and Control File. The table provides transit time specifications for each destination, using a zone method to identify mode sets and related transit time codes.

d. Carrier Performance Update Cards.

(1) Appendix B-1 provides the Carrier Performance Update Card formats used to perform the following actions against the F-220 report. Carrier Performance update card entries are accomplished through $$UWFH25, Entry Code UA (appendix E-234 P, part A).

(a) Add corrected TK4, records rejected by DASC Tape or Carrier Performance Update Card processing (reject listing).

(b) Change existing TK4 date shipped and date received data.

(c) Delete erroneous TK4 records from the listing.

(2) Incorrct card image input is identified on the reject listing provided the day following processing. Paragraph 5 below defines the possible reject listing error messages with probable cause and corrective action statements.

e. Carrier Performance Report Request Card.

(1) Appendix B-2 provides the Carrier Performance Report Request Card formats entered through program $$UWFH25, entry code UA (appendix E-234 P, part A) to request total or partial print or reprint of the Carrier Performance Intransit Analysis Report. The report is generated on request by the responsible organizational element. All parts are available for reprint during the months processing period. The reprint action will generate a re-compilation of report statistics affected by the add, change or delete actions defined in subparagraph d above.

(2) The reject listing, F-220, part 6, is an automatic by-product of each DASC Tape and/or Carrier Performance Update Card processing by Data Systems.

5. ERROR MESSAGES/ACTIONS

Report processing validates all input formats for validity of field alpha/numeric content and length. All errors are identified on the reject listing with the message 'FORMAT ERROR' and the data format displayed with the erroneous field underscored with asterisks. The following are other messages that may appear on the reject listing.

ERROR MESSAGE	CAUSE/ACTION
INVALID REQUEST	Probable Cause: The Carrier Performance Report Request Card was submitted with a part number request other than A, 1, 2, 3 or 5, or the Carrier Code entered was not alpha/numeric, left-justified. Action: Submit corrected Carrier Performance Report Request Card, following card format instructions in appendix B-2.
ACTION CODE REQUIRED	Probable Cause: The Carrier Performance Update Card was submitted without an A, C or D Action Code in pos. 80. Action: The update card must be resubmitted with Action Code A, C or D in pos. 80 per appendix B-1 formats.
RECORD NOT ON FILE	Probable Cause: The Carrier Performance Update Card was submitted with A, C or D Action Code for a GBL record not found in the IDC Master File. Action: Research input data format for error and submit corrected cards, if necessary.
DUPE RECORD ON MASTER FILE	Probable Cause: This message indicates there was an attempt to add a TK4 GBL intransit record that already exists on the IDC Master File. Action: The Carrier Performance Update Card provides three separate update actions against the Carrier Performance Intransit Analysis Master IDC File. A TK4 add action, appendix B-1, cannot be accomplished for a GBL Intransit Data Record if the record already exists in the IDC Master File. If it is desired to correct date shipped or date received (appendix B-1, pos. 15-17, pos. 18-20 or pos. 60-62) the C Action Code is applied to accomplish the change. If the correction involves intransit record data other than the date shipped or received it is necessary to delete (appendix B-1, Action Code D) the record entirely and then add

ERROR MESSAGE	CAUSE/ACTION
	(appendix B-1, Action Code A) the corrected record to the report. Delete and add update actions for an intransit record can be accomplished during the same Carrier Performance Update Card processing run.
CARRIER NOT ON FILE	Probable Cause: This message indicates that either the DASC MILSTEP Tape or Carrier Performance Update Card input contained an SCAC Carrier Code that was not found in the Carrier Code File. Action: Research the SCAC Carrier Code in pos. 5-8 for accuracy. If the SCAC Code submitted is correct, it will be necessary to update the Carrier File (appendix E-230, part A) with the missing carrier information before the intransit data record can be added to the report. If the carrier information in pos. 5-8 is incorrect, the intransit data can be added to the report by submitting a Carrier Performance Update Card (appendix B-1) with the corrected SCAC Carrier information (Action Code A). Research input data format to determine correct update action for the intransit data record and submit Carrier Update Performance Card accordingly.
ADDRESS NOT ON FILE	Probable Cause: There was no record found in the Address File for the activity address or POE Code in pos. 47-52. Action: Research the address information in pos. 47-52 for accuracy. If the Address Code submitted is correct, it will be necessary to update the address file (E-129 P) with the missing information before the transit data record can be added to the report. If the address information in pos. 47-52 is incorrect, the intransit data can be added to the report by submitting a Carrier Performance Update Card (appendix B-1) with the corrected activity address or POE Code information (Action Code A).
O/S CONSIGNEE SPLC NOT AVAILABLE	Probable Cause: This message indicates that the Activity Address Code, pos. 47-52, is assigned to an overseas consignee. Action: In order to add this intransit data record to the report, it will be necessary to determine the CONUS POE for the shipment. The record will be added by submitting a Carrier Performance Update Card (appendix B-1) with the CONUS POE activity address or POE Code in pos. 47-52 using Action Code A.

ERROR MESSAGE	CAUSE/ACTION
SPLC NOT AVAILABLE ON TRANSIT ZONE TABLE	Probable Cause: This message indicates the SPLC or SPLC Group Code for the consignee indicated in pos. 47-52 was not found on the Intransit Zone Table of the MOFAST Table and Control File, appendix B-66, part K, table 11. Action: It will be necessary to add the SPLC or SPLC Group Code and related Transit Time Codes to the Transit Zone Table before the transit data record can be added to the report (appendix B-1, Action Code A).
MSS NOT AVAILABLE ON THE TRANSIT ZONE TABLE	Probable Cause: There is no Minimum Service Standard found in the Transit Zone Table, MOFAST Table and Control File, appendix B-66, part K, table 11, for the Mode Code entered in pos. 27. Action: Update the Transit Zone Table with the Minimum Service Standard Transit Time Code or pos. 27 Mode Code. The record can then be added to the report by submitting a Carrier Performance Update Card, appendix B-1, Action Code A.
ERRONEOUS TRANSIT TIME	Probable Cause: The computed transit time is less than 0. Action: Research date shipped and date received (pos. 60-62 and pos. 15-17, or pos. 60-62 and pos. 18-20) for erroneous input. The record can be added to the report by submitting the corrected transit time data on the Carrier Performance Update Card, appendix B-1, with Action Code A.
INVALID DIC	Probable Cause: The Document Identifier Code submitted in pos. 1-3 is not equal to TK4. Action: Research intransit data information for the correct DIC information. If the correct DIC is TK4, the intransit data information can be added to the report by submitting a Carrier Performance Update Card, appendix B-1, Action Code A.
SPLC NOT ON ADDRESS FILE	Probable Cause: No SPLC was found in the Address File Record for the activity address in pos. 47-52. Action: It will be necessary to update the Address File (E-129 P) with the missing information before the transit data record can be added to the report.

APPENDIX E-041 P

SUSPENDED TK4 CARDS

1. PURPOSE

This procedure describes the method that will be utilized to transceive suspended TK4 data to the MILSTEP Central Data Collection Point (CDCP) Tracy, CA, and to build TK4 data to be suspended for manual bills of lading.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-106

b. Appendix B-194

c. Appendix E-224 P, Part A

3. RESPONSIBLE ORGANIZATION ELEMENT

Transportation and Shipping Division, DS/T

4. PROCEDURES/INSTRUCTIONS

a. The procedure for processing suspended TK4 cards allows an operator to post a date received into a suspended TK4 card and transceive it directly to the CDCP via AUTODIN. It also allows an operator to build a TK4 card for suspense for a manual bill of lading. This procedure is initiated by typing $$UWFM50 and pressing the ENTER key.

b. The initial display will be as follows:

UWFM50 TK4 CARD PROCESS
ENTRY
ENTRY DESCRIPTIONS:

A 4 POS. CARRIER CODE ENTRY WILL DISPLAY ALL TK4'S FOR THAT CARRIER.

AN 8 POS. GBL NUMBER ENTRY WILL DISPLAY THAT SPECIFIC TK4.

A CARRIER AND GBL ENTRY WILL DISPLAY FROM THAT GBL FORWARD.

A 1 POS. "M" WILL ALLOW CREATION AND SUSPENSION OF A MANUAL TK4.

A 1 POS. "D" WILL ALLOW DELETION OF TK4'S OR A CARRIER.

NOTE AN OPERATOR ENTRY IN DATE RECEIVED FIELD WILL TRANSCEIVE THAT TK4.

(1) Entry of a four-position Standard Carrier Alpha Code (SCAC) will bring up all TK4s associated with the SCAC entered, or a twelve position entry of SCAC and GBL number will bring up all TK4's associated with the SCAC beginning with the GBL number entered. If the entry is successful, the following display will appear:

UWFM50 TK4 CARD PROCESS
ENTRY

CARR	GBL NR	RCVD	CONSGNR	MODE	DEST	PRI	DDD	SHPD	IND
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N
AAAA	BBBBBBBB	000	CCCCCC	D	EEEEEE	1	333	222	N

Where:

AAAA = Standard Carrier Alpha Code (SCAC)
BBBBBBBB = GBL Number
000 = Date Received
CCCCCC = Consignor
D = Mode of Shipment Code
EEEEEE = Consignee
1 = Issue Priority Group
333-DDD = Desired/Delivery Date
222 = Date Shipped
N = Status Indicator (O = Transceived, I = Intermediate, N = Established)

(a) The cursor will be positioned at the only updateable field, the date received. Enter the date the carrier made delivery to the consignee.

(b) A proper entry will flag the record for tranceiving via AUTODIN to the CDCP.

(2) Entry of an eight-position GBL number will bring up the TK4 for a specific GBL. If the entry is successful the following display will appear:

```
UWFKM50    TK4 CARD PROCESS
ENTRY
CARR    GBL NR    RCVD   CONSGNR   MODE   DEST   PRI   DDD   SHPD  IND
AAAA   BBBBBBBB   000    CCCCCC     D    EEEEEE   1    333   222   N
```

Where:

AAAA	=	Standard Carrier Alpha Code (SCAC)
BBBBBBBBB	=	GBL Number
000	=	Date Received
CCCCCC	=	Consignor
D	=	Mode of Shipment Code
EEEEEE	=	Consignee
1	=	Issue Priority Group
333-DDD	=	Desired Delivery Date
222	=	Date Shipped
N	=	Status Indicator (O = Transceived, I = Intermediate, N = Established)

(a) The cursor will be positioned at the only updateable field, the date received. Enter the date the carrier made delivery to the consignee.

(b) A proper entry will flag the record for transceiving via AUTODIN to the CDCP.

(3) Entry of "M" to prepare a TK4 for manual GBLs will bring up the following display:

```
UWFM50      TK4 CARD PROCESS
ENTRY
CARR  GB. NR     RCVD    CONSGNR MODE    DEST    PRI    DDD    SHPD

                 000     SW3400                         000    000

                 000     SW3400                         000    000

                 000     SW3400                         000    000

                 000     SW3400                         000    000

                 000     SW3400                         000    000

                 000     SW3400                         000    000

                 000     SW3400                         000    000

                 000     SW3400                         000    000
```

(a) The cursor will be positioned at the first updateable field. Upon entry of an SCAC, the cursor will skip to the next field. All fields, except the Date Received field, must be completed. However, if you want to transceive the TK4 the same day you build it, the Date Received field must be complete.

(b) Proper entries will build TK4 data for manual GBLs.

(4) Entry of "D" to delete a TK4 will bring up the following display:

```
UWFM50  TK4 CARD PROCESS
ENTRY
     GBL NR OR A CARRIER
```

(a) The cursor will be positioned in the proper field to enter an eight position GBL number or a four position Carrier Code.

(b) Proper entry will delete the TK4 data for the GBL number entered or all TK4 data for the Carrier entered.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
CARRIER NOT FOUND	Probable Cause: An SCAC was entered for a carrier and no TK4 data for that carrier has been established or the SCAC was entered wrong. Action: Review the SCAC entered to determine if the code entered was correct. Reenter the corrected input.
TK4 ALREADY SUSPENDED	Probable Cause: An entry was made to establish a TK4 for a manual GBL and one is already on file. Action: Review the entry to see if all fields are correct. Reenter corrected input. If all fields are correct, no further action is necessary.
TK4 NOT FOUND	Probable Cause: An entry was made for a specific GBL and a TK4 for that GBL is not on file. Action: Review the entry to determine if the GBL number entered is correct. Reenter corrected input.
INVALID DATA	Probable Cause: A field was left blank when the operator was building a TK4 for a manual GBL. The cursor will be positioned at the field that is in error. Action: Reenter the corrected input.

ERROR MESSAGE	CAUSE/ACTION
INVALID INPUT	Probable Cause: An entry of other than M, a four-position SCAC or an eight-position GBL number was attempted. Action: Review the entry to see if it is correct. Reenter corrected input.
DATE RECEIVED INVALID	Probable Cause: A date received was entered that was greater than the current date or less than the date shipped. Action: Review the entry to see if it is correct. Reenter valid date.

APPENDIX E-043 P

TCN/GBL CROSS-REFERENCE LISTING

1. FORM/REPORT USED

Appendix F-43, TCN/GBL Cross-Reference Listing.

2. REASON/CRITERIA FOR PREPARATION

The TCN/GBL Cross-Reference Listing, appendix F-43, is a computer prepared list of Shipment Unit TCNs assigned during the month cross-referenced applicable bill of lading number/USPS registered parcel number.

3. ORIGIN

Produced as a result of the Monthly MRO History File Analysis as depicted in appendix D-87.

4. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Shipping Documentation Branch and the Commercial Traffic Branch, Division of Storage and Transportation, will be responsible for review of the appendix F-43 report to provide followup information on tracer actions received.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING OF REPORT

a. Tracer action on shipments will be received via message/letter or transportation tracer action card (TM1 format in MILSTAMP). The inquiry normally includes data to identify the shipper, the date shipped, if known, mode of shipment, TCN number, and Activity Address Code. The GBL number is not usually provided in the message/letter or TM1 card, therefore it is necessary to determine the GBL through the use of the appendix F-43, TCN/GBL Cross-Reference, in order to determine/locate the desired document number and pull GBL File copy maintained by the Commercial Traffic Branch.

b. The Shipping Documentation Branch will receive all inquiries and utilize the TCN/GBL Cross-Reference Listing as research media to determine proper action when inquiries or tracers are received. The Shipping Documentation Branch will prepare appropriate replies for other than GBL movements (parcel post, Government truck, and so on).

c. Inquiries on bill of lading movements will be forwarded, with appropriate number, to the Commercial Traffic Branch for action/reply.

6. PREPARATION OF THE FOLLOWUP ANSWER

Utilizing the GBL as source data, the followup answer in the form of an administrative message/letter can be prepared. The data required/furnished from the GBL should include: Julian date shipped, mode of shipment, POD Code, and other data pertinent to the tracer action.

7. DISPOSITION OF REPORT AFTER FINAL ACTION

One copy of the monthly report, appendix F-43, will be maintained in file for a minimum of four years at each DLA depot.

APPENDIX E-044 P

MOFAST CANCELLATION PROCESSING

1. PURPOSE

This procedure describes the processing options available to MOFAST functional operators whose input has been violated due to a pending cancellation.

2. APPENDICES USED IN THIS PROCEDURE

D-43
E-216 P
E-217 P
E-234 P, Part C
E-238 P, Part D

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

DS/T

4. PROCEDURES/INSTRUCTIONS

a. The following MOFAST processes will violate input entries when the SU(s) relative to the input contains a LI(s) that has been flagged with a pending cancellation: UWFB01, UWFC01, UWFE01, UWFE30, UWFF01, UWFF55, UWFH05, UWFJ20, and UWFK05.

b. The above MOFAST processes determine the presence of pending cancellations based on the value in the "Cancellation Override" field of the SU record (refer to program UWFQ45, appendix E-238 P, part D) as follows:

C = Cancellation Pending
O = Cancellation Overridden
Blank = Cancellation Accomplished or No Cancellation Pending

Violated SUs will contain a C in the Cancellation Override field.

c. To change the cancellation override field from C to a value that will allow continued processing will require one or a combination of the following actions:

(1) Perform cancellation actions for each LI within the SU that is flagged with a pending cancellation. To identify LIs with pending cancellations utilize the E option in program UWFQ45 (appendix E-238 P part D). Cancellation actions can be accomplished utilizing any one of the following processes:

UWFB01 - Appendix E-216 P
UWFC01 - Appendix E-217 P
UWFH25 - Appendix E-234 P, Part C

Performing all pending cancellations will automatically convert the C in the SU record to a blank. If all LIs with pending cancellations are not canceled then the action identified in subparagraph (2) below will be required.

(2) Use the cancellation override option (CO) in program UWFH25 (appendix E-234 P, part C) to change the C to an O.

NOTE: Single lining LIs (program UWFQ40, appendix E-238 P, part C) with pending cancellations from the basic SU will remove the C from the override indicator field of the basic SU. The new 11 position SU will have a C in the cancellation override field.

d. Update of the Cancellation Override field to a blank or an O will allow the SU to be processed through subsequent programs without being violated.

e. The above options allow depots to selectively cancel or override pending cancellations based on local depot policy.

APPENDIX E-045 P

NUMBER OF TRANSACTIONS RECEIVED AND FORWARDED BY DEPOT

1. FORM/REPORT USED

a. Appendix F-14, Number of Transactions Received by Depot.

b. Appendix F-15, Number of Transactions Forwarded by Depot.

2. REASON/CRITERIA FOR PREPARATION

To provide responsible management personnel with a consolidated report of the number of external and/or internal transactions received and/or forwarded by a depot during an established reporting period. These data are provided in addition to those contained in appendix F-9, Feeder Data for RCS DLA(M)26(C)MIN/ DLA(M)232(O)MIN Reports.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Office of Data Systems, Digital Communications Branch, will accumulate data for preparation of appendices F-14 and F-15, as indicated by appendices D-67 and D-68, and as directed by chapter 74, Management Information and Reports, paragraph 374201 of this volume.

b. MSO, DS/T, and the Performance Analysis and Reports Division, Office of Comptroller, are responsible for review and evaluation of the reports.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Sources of Information.

(1) Header History File - As messages are processed in the Entry Section program, a tabular count is taken and compared with the count recorded in the Header and End of Transmission (EOT) cards. If counts do not agree - the message is rejected. Count is made of DICs specified in category VI, appendix A-83, prefix Y elements - incoming and Z elements for documents forwarded.

(2) Manual count of narrative messages sent and received.

(3) Adjustments will be made manually, the B-135 (ZUM) Management Information System Card will not function in this application.

b. Preparation of Form/Report.

(1) Frequency:

(a) A daily count and a cumulative report to date will be prepared each day.

(b) A report as of 2400, the last day of the month will be prepared and the cumulative total cleared after completion of the F-14 and F-15 reports.

(2) Format of Report:

(a) Formats of F-14, Number of Transactions Received by Depot, and F-15, Number of Transactions Forwarded by Depot, coincide except for the titles.

(b) Reports provide four columns:

DIC	DESCRIPTION	DAILY	CUMULATIVE
	(of DIC)	Number Received/Forwarded	(Total since beginning of period)

(c) Sequencing - Major to minor sequence is by printed description of the element number (appendix A-83) as indicated in the first two columns of the report.

(d) Distribution - The report is prepared in four parts: two copies to the DS/T, MOWASP Data Control Branch, and two copies to the Office of Comptroller, Performance Analysis and Reports Division.

5. PROCEDURES/INSTRUCTIONS FOR REVIEW AND PROCESSING

a. The reports portray the daily and totals of daily reports accumulated to date of "incoming" (F-14) and "transmitted" (F-15) transactions received/sent to all commodity managers during a reporting period. Line descriptions of appropriate element numbers are printed only when data is accumulated for a specific element number; where no activity is recorded for an element number, the line will be omitted on the reports. Descriptions of data elements appear in Management Information System Element Numbers, appendix A-83, category VI, paragraph 9.

b. Data is used by DS/T to evaluate incoming and outgoing traffic and its effect on workload. Data supplied is used in projecting future program plans and objectives.

6. DISPOSITION AFTER FINAL ACTION

Appendices F-14 and F-15 will be destroyed after data desired has been extracted and applied.

7. FLOW CHART

Not required.

APPENDIX E-046 P

DISPOSAL SHIPMENT CONFIRMATION FOLLOWUPS

1. PURPOSE

This procedure provides for intransit control of property shipped/transferred to a Defense Reutilization and Marketing Office on a Disposal Turn-in Document and for followup on discrepant line items.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-37, Disposal Shipment Confirmation Followup Card.

b. Appendix B-38, Disposal Shipment Confirmation Card.

c. Appendix D-51, Disposal Shipment Confirmation Followups.

d. Appendix F-46, Disposal Shipment Confirmation Followups.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Receive signed Driver Control copy of the Disposal Turn-In Document (DTID) if provided on local shipment/transfers. If Driver Control copy is not provided, receive a signed copy of the DTID from the Defense Reutilization and Marketing Office (DRMO) after receipt and inspection has been completed. File signed copies of DTIDs.

b. Upon receipt of a Disposal Shipment Followup (DIC AFX or AFZ) the followup card column image and related history data will be outout on the F-46 listing for use by DS/T to verify the actual quantity receipted for by the DRMO.

(1) If a signed Driver Control copy or signed receipt copy of the DTID is not available, but investigation indicates property was removed from the storage area and cannot be located, DS/T will notify the appropriate criminal investigative activity. At the same time a Disposal Shipment Confirmation Card (DIC ASZ) will be transmitted to the Defense Reutilization and Marketing Service (DRMS) through DAAS with a zero filled quantity field.

(2) If a signed receipt of the DTID is available, a Disposal Shipment Confirmation Card (DIC ASZ) will be transmitted to DRMS through DAAS and will contain the actual quantity receipted for by DRMO. In case of a variance between the quantity on the Disposal Shipment Confirmation Followup Card (DIC AFX or AFZ) and the quantity receipted for by DRMO, DS/T will investigate the variance and coordinate with the DRMO to resolve the overage or shortage. If these actions fail to locate shortage items and evidence exists that the

property was removed from the storage area, but not accounted for in DMRO receipts, DS/T will notify the appropriate criminal investigative activity. Overages will be considered for return to stock to meet future requirements.

c. Disposal Shipment Confirmation cards (DIC ASZ) (see appendix B-38) will be submitted to DRMS within 10 working days of receipt of Disposal Shipment Confirmation Followup Cards (DIC AFX or AFZ).

d. Data entry of the DIC ASZ Disposal Shipment Confirmation may be accomplished by card input or by Four-Phase using UWSDDE40 in accordance with appendix B-38.

APPENDIX E-047 P

RECEIPTS FOR REPORTING AND STORAGE

1. PURPOSE

This procedure provides for receipt processing from the time materiel is unloaded until it is placed in the storage location.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-13

b. Appendix A-16

c. Appendix B-22

d. Appendix B-41

e. Appendix B-43

f. Appendix B-46

ag. Appendix F-202

ah. Appendix F-203

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Various elements of the Receiving and Warehousing Divisions are responsible for the functions as designated.

4. PROCEDURES

a. General Instructions

(1) Misdirected shipments with address labels reflecting a consignee other than the receiving depot will be rejected to the carrier.

(2) Frustrated shipments, received at depot addressed in block A of DD Form 1348-1 will be routed to Shipping Division for investigation.

(3) Non-DLA items received at depot will be processed, stored and MRC forwarded to the correct ICP (except GSA).

(4) GSA-managed items will be processed as directed by part 1, chapter 3, section 4, paragraph 303404 of this volume. No receipt action will be accomplished.

(5) Transshipments as indicated by accompanying documents will be processed IAW appendix E-010 P. No new receipt inquiry, Type A or K will be processed; no Receipt Control Document (RCD) or Materiel Movement Document (MMD) will be forwarded to Stock Readiness Branch.

(6) Customer returns that cannot be inspected and classified within 7 days of receipt may be placed in Condition Code K (an SF 364 is not required). A maximum period of 10 workdays is established, from the date reported in Condition Code K, to reclassify and report the adjusted receipt transaction.

(7) Shipment diversion receipts will be reported by the alternate consignee depot with an entry of RB in pos. 79-80 of the MRC, DIC D6_.

(8) An SF 364 shall not be prepared for overshipments of $50.00 or less per line item when the contract or order includes a "DELIVERY OF EXCESS QUANTITIES OF $50.00 OR LESS" clause.

(9) Textile short pieces in issuable condition will be recorded and reported to DPSC in Condition Code C. Short pieces are defined as: single pieces, full width, less than a full length piece, but not less than 10 yards in the case of frieze and pile fabrics; not less than 18 yards in the case of woolens and worsteds and not less than 20 yards in the case of all other fabrics.

(10) Materiel procured by the managing DSC for which mandatory vendor supply has been directed through the provision of the ASPR 1-307.3, and found to have sustained damage attributable to the carrier, will be removed from the delivering conveyance and reported to the DSC. Reference part 1, chapter 3, section 3, paragraph 303303p of this volume.

b. Bin type (and MMHS compatible) receipts and all those receipts offloaded at a central receiving area:

(1) For rail and truck receipts, obtain freight bill. Check seals and annotate on freight bill if seals are broken or missing. Make container count as vehicle is unloaded. Visually check containers for damage as unloaded. Annotate overages, shortages, or damage on freight bill. When possible, indicate the line item on freight bill where discrepancy exists. Obtain signature of driver/freight agent on freight Bill. Enter date, number of pieces, type containers on freight bill, and sign (two copies). Furnish carrier's representative one signed copy. Forward one copy to Receipt Documentation Branch. Discrepancies will be processed IAW appendices E-155 P and E-156 P for reporting carrier responsibility. Enter date of receipt (for use on Type A or K Inquiry) on the lead container of each shipment.

(2) For parcel post, use a date stamp (for use on Type A or K inquiry) on all containers. Check all insured, certified, and registered items to determine if materiel is classified. All classified materiel will be processed and handcarried to final destination for signature and storage by personnel with security clearance. Registered and certified parcel post packages will be opened, receipt documents scanned; record the applicable information on DD Form 434. When parcel post containers are damaged, retaped, or open, and the container has not been stamped by the U.S. Postal Service acknowledging the damage, the container will be returned to the post office.

(3) Unload vehicles as follows:

(a) Small containers will be unloaded utilizing telescoping conveyor. Place parcel post containers directly onto conveyor line from postal carts.

(b) Multipack containers and overweight/oversize containers will be unloaded on pallets and moved to bulk staging area.

(c) Place containers on conveyor by contract number/document number, vendor, and by NSN.

(d) When applicable, open triwall containers. Remove materiel and documentation, place on conveyor.

(e) Radioactive materiel will be segregated immediately for palletizing and transport to bulk receiving area for special handling.

(4) Key/Route each shipment to appropriate staging line using data readily available such as container markings, and vendor's name.

(5) Remove receiving document, opening container if necessary. Package or containers that contain a single line item, properly tagged, marked, or labeled, should not be opened for verification/classification unless there is evidence of mishandling, damage to contents, error, or when specific instructions require inspection or reinspection at destination. On opening packages, remove dunnage. Sort so all containers of one receipt are together.

(6) Verify receipt documentation against materiel for NSN, document number/PIIN/Supplementary PIIN (call order/serial number), date of pack (and type pack for subsistence items). Check quantity and annotate on DD Form 250 or DD Form 1348-1. Perform classification as needed. Identify those shipments requiring inspection. If shelf-life item, mark container. Complete in-check portion of receiving document, including date of receipt and signature.

NOTE: When there is no accompanying documentation with materiel, prepare receiving document using data on container/item or available in Receipt Documentation Branch. Obtain name of shipper, NSN, and document number, and enter on blank DD Form 1348-1/DD Form 250.

(7) Circle on receiving document the data available for Type A or K inquiry, see appendix E-162 P. Place document in #1 container. Protect document by inserting in plastic sleeve and taping sleeve to #1 container. Mark container/prepare routing card for remote station with NIIN, Condition (if other than A), last five digits of PIIN/Document Number/Supplemental PIIN, and date of pack. Add inspection line number, if appropriate. Line up containers so that data/routing card will face remote operator on arrival.

(8) Release all sorted and marked containers for movement to the inquiry station. Maintain unit integrity on multipack line item.

(9) Depending on depot option, operators at this point will utilize either MOWASP Type A Inquiry or DWASP Type K Inquiry to initiate the Inspection/Verification process. DICOMSS operations will utilize Type K processing.

(a) Make Type A or K Remote Inquiry IAW appendix E-102 P, entering date of receipt marked on container when offloaded as noted in subparagraphs b(1) and (2) above. Should an error be made that requires deleting the receipt record from the suspense file, reenter with Type D inquiry

(b) When using Type K Inquiry, errors may be corrected directly on screen.

(10) Remove documentation from remote terminal printout. All Type A inquiries IAW appendix E-102 P will produce separate receipt and storage documents and may also (for procurement-identified items) generate inspection data. Type K Inquiries will produce a Materiel Movement Document (MMD), similar in appearance to an appendix F-202 and functionally inter-changeable with this document.

(a) The Receipt Control Document (RCD) IAW appendix F-200 will be produced to detail PMR data and to supply a coding form for receipt confirmation entry. If the item has any backorders pending at the DSC, a message will be displayed/printed reading EXPEDITE-B/O PENDING. The F-200 will not be produced if the Type K Inquiry is used.

(b) The Storage Action Document (SAD) IAW appendix F-202, will exhibit location data as well as provide a coding form for the Stow Notice to be prepared IAW appendix E-110 P. If the item has any backorders pending at the DSC, a message will be displayed/printed reading EXPEDITE-B/O PENDING. Type K Receipt Inquiries will generate a Materiel Movement Document as replacement for the SAD; utilize appendix F-202 for annotation instructions.

(c) If the inquiry references a Procurement Item Instrument Number (PIIN), an appendix F-201, Contract Data Sheet (CDS) may be output at the remote terminal. The CDS will furnish inspection data necessary for accomplishing the receipt action. Contract Data, appendix F-201, will be displayed on screen face for Type K Receipt Inquiry. No hard copy will be produced.

(d) For Type A Inquiries, the sequence of documents machine produced at the remote teleprinter will be as follows:

1. Procurement Items-Receipt Control Document (RCD) first, followed by the Storage Action Document (SAD) and the Contract Data Sheet (CDS), appendices F-200, F-201, and F-202.

2. Other than Procurement (or Procurement with no matching Contract Data) - Receipt Control Document followed by the Storage Action Document, appendices F-200 and F-202.

3. All Documents are automatically output in two copies. Color of paper is determined by local/depot option.

(11) For Type A Inquiries, the Receipt Control Document, the Storage Action Document and, if available, the Contract Data Sheet will be associated by common data as well as the Teleprocessing Control Number. This TP number will appear in the upper right-hand corner of all documents for control purposes. The remote terminal operator will release the materiel and required documents to the appropriate inspection area.

(a) Type K Inquiries will be required in place of Type A for acceptance or DICOMSS identified receipts. This type of receipt processing is SINGLE STATION (DWASP Prototype) and does not output appendix F-200, RCD-1 or F-201, Contract Data Sheet (CDS). Instead of hard copy documentation, Type K receipt processing utilizes a CRT display to provide all data elements, messages and coding formats now present on the RCD-1 and CDS documents.

(b) Ensure that all receipts released have a Receipt Control Document and a Storage Action Document or a Materiel Movement Document for Type K Inquiry actions.

(c) Review all procurement receipts ensuring that the Contract Data Sheet (when produced) accompanies the RCD and SAD. Match all documents by TP Control Number.

(d) Route materiel and above documents to inspection line when materiel is a Shelf-Life Item; inspection at destination or otherwise, requires the service of an inspector.

1. When the SAD/MMD reflects a bin location and the entire quantity will fit in a bin, annotate appropriate area on the SAD/MMD and forward both copies of the form attached to the materiel, together with the pink copy of the RCD, to the bin areas.

2. When the entire quantity is more than will fit in a bin, annotate the appropriate area on the SAD/MMD and forward the two copies of that form, together with the pink copy of the RCD, to the bulk area.

3. Forward container through sorter and cart conveyor system to storage.

4. Forward all receiving documents (DD Form 250/DD Form 1348-1, and so on) and the original copy of the RCD to Receipt Documentation Branch.

(12) Error Line. Accomplish required research, check and/or cross-reference the NSN with current supply catalogs, and/or technical manual. When any change in NSN is detected, circle the improper NSN and record the correct NSN on the receiving document. Prepare Type D Remote Inquiry (reversal of Type A). Prepare Type A Remote Inquiry for the correct NSN. Continue processing materiel to storage.

(13) Inspection Line. Some receipts could require an operational or functional test to determine the correct condition. When this test cannot be performed by the Receiving Division, the materiel, if from procurement, will be reported in Condition Code L with Management Code Z and an SF 364 submitted to the DSC/ICP; and if from returns, reported in Condition Code K with Management Code Z and an SF 364 submitted to the DSC/ICP.

(a) General Instruction. Perform inspection of new procurement, redistribution, and customer return materiel as required. Prepare Item Discrepancy Report, SF 364, IAW appendix E-150 P, when applicable. Commingled and mismarked GSA-managed items identified through use of the GSA catalog and listings will be processed as directed in subparagraph a(4) above.

(b) Procurement Materiel Inspection will require the hard copy of the contract or procurement document when the receipt indicates automated contract data not available (no appendix F-202 was processed) or the item manager recorded for the NSN is "S" or "T". In these instances obtain contract or procurement document from the Receipt Documentation Branch. Review contract and receiving documents. Complete the DD Form 250 IAW appendix E-017. Release materiel to storage as directed in subparagraph b(11)(c) above.

(c) Procurement Materiel Inspection action for receipts accompanied by a Contract Data Sheet (CDS), appendix F-202 will not require the use of hard copy contract data. Sufficient information is provided the CDS to accomplish the receipt inspection. When investigation of Type K Inquiry Response (DWASP Prototype) is required, annotate T.P. number on receipt documentation (i.e., DPSC Form 300.M) and depress ENTER key. Screen will revert to Type K or previous input. Perform necessary investigation or inquiry activity. Select Type L inquiry when ready to continue inspection.

1. Enter T.P. number

2. Review display; complete data entry/update requirements. All data elements must be updated before DIC ZV_/ZW_/ZX_/ZY_ be confirmed.

3. Data element requirements are equal to applicable RCD entries.

(d) When the necessary document requirements have been met, accomplish the physical inspection actions as follows:

1. The following actions with inquiries if required, must be performed prior to conducting the detailed inspection for all receipts which evidence automated contract data; otherwise, proceed to subparagraph 3 below.

2. Review Contract Data Sheet, appendix F-201, for compliance with Receipt Control Document (RCD) and the physical materiel. If the CDS does not exhibit the proper CLIN, prepare and input a Contract Data Inquiry IAW format, appendix B-68. Review display and print desired contract data, if necessary. If CDS, as received is correct:

a. Examine CDS for history of previous receipts ("Receipt History for CLIN" line). If more than three partials are recorded, prepare a Completed Receipt Inquiry IAW format appendix B-69 to display the required Completed Receipt Response, appendix F-205, part II.

b. If the CDS indicates the message "Partials on File", it will be necessary to prepare and input a Suspended Receipt File inquiry. This response will reflect similar receipt actions in process.

c. Commence detailed inspection utilizing the Contract Data Sheet (with additional inquiry responses, if required) in lieu of the hard copy of the procurement instrument or contract. Specific details relative to the CDS are outlined in appendix F-201 for references. The CDS will reflect the acceptable quantity limits (high and low); in addition, the $50.00 variance clause will be automatically reflected in the high quantity balance acceptable figure. Receipts specifying acceptance at destination will be carefully examined for availability of that data necessary to generate an Acceptance Report, i.e., vendor shipment number, shipment number suffix, administering location code and quantity shipped.

3. Receipts which have been inspected and accepted at origin or inspected at origin with acceptance at destination will be examined for correct receipt documentation, evidence of acceptance and/or inspection at origin identity, damage in transit, quantity, marking, and to assure packaging is adequate for storage.

For clothing and textile products: At least one container/package and/or roll per NSN, per contract line item, per shipment will be selected as the representative sample size. At least one base item per container/package and/or at least the first five yards of products per package/roll selected should be inspected.

4. Receipts which stipulate inspection and acceptance at destination will be inspected for correct receipt documentation, packaging requirements, damage in transit, and quantity. At least one unit of product, equal to the unit of issue, will be inspected for compliance with the contract description and terms. Additional units should be inspected if the one piece inspection does not provide positive evidence that the receipt should be accepted or rejected. Additional technical inspection, within the capabilities of the depot, will be performed when specifically requested by the DSC.

5. Exceptions. When item is designated as critical in the contract, do not inspect, report to procuring activity, and take action as directed; when required inspection capability is not available at the depot, report to procuring activity and request assistance as necessary.

NOTE: It is the responsibility of the procuring activity to assure presence of depot inspection capability prior to assigning inspection responsibility to a depot.

(e) Redistribution and Customer Returns Inspection. Determine item identity by checking item, container/package markings, and data on DD Form 1348-1. Refer to Stock Catalogs as necessary. Verify unit of issue. Examine for damage or serviceability. Returns not in manufacturer's pack will be given 100 percent inspection. Sort, when applicable, unserviceable stock from accepted property and place in separate container. Sign and date the DD Form 1348-1 and release materiel to storage as directed in subparagraph b(11)(c) above.

(f) Other Inspection Actions:

1. When procurement materiel is rejected, it will be placed in Condition Code L with Management Code Z and an SF Form 364 submitted. The Condition Code on the SAD will be lined out together with all location data. The new Condition Code will be annotated directly below the voided (printed) condition.

2. When distribution materiel is rejected, it will be placed in Condition Code J with Management Code Z. Condition Code J will not be used when the NSN actually received can be identified, but is different from the NSN on the receiving document or the depot due-in record and the true Condition Code of the materiel can be determined. A Type D inquiry IAW appendix E-182 P must be submitted to reverse the action of the Type A inquiry. Initiate a new Type A inquiry IAW appendix E-102 P, reflecting the actual NSN received and the appropriate Condition Code. Management Code Z will be annotated on the Receipt Control Document. An SF Form 364 will be submitted to the DSC/ICP to provide information when an incorrect item has been received or Condition Code J has been used.

3. When customer returns are rejected, they may be placed in Condition Code K with Management Code Z and an SF 364 submitted.

a. Serviceable - prepare a Materiel Adjustment Card IAW appendix B-22. Forward materiel to storage.

b. Unserviceable - uneconomically repairable, prepare a Materiel Adjustment Card IAW appendix B-22, entering H in pos. 66 and an M in pos. 72. Forward materiel to Property Disposal Officer (PDO) using computer assigned document number.

4. When materiel has been condemned (Condition Code H) unserviceable, uneconomically repairable, forward materiel to PDO using original document number. Enter Condition Code H and Management Code M on the RCD. (Management Code M will be automatically assigned to new receipt inquiries in Condition Code H.) If materiel is to be destroyed, Management Code J will be used, or entered in appropriate RCC.

NOTE: Stock to be forwarded to the PDO will be sorted when applicable, separate unserviceable stock from accepted property and place in separate container. Annotate on receiving document and on RCD accordingly, i.e., "Sent to PDO". Place documents with the rejected materiel and route container(s) to the PDO staging area.

5. If materiel is found to be in two or more conditions, a Type A inquiry will be processed for each additional condition. For example, if a portion of the receipt is in Condition B and the remainder in Condition K, one additional Type A inquiry would be processed. See instructions below for proper annotation of Receipt Control Document.

6. When destruction is required, the depot will destroy the materiel. Enter Condition Code H and Management Code J on the RCD. Supporting data and the destruction certificate will be retained in the depot records for two years, and then destroyed.

7. When the Condition Code of the Type A inquiry is changed by aninspection or other qualified receiving personnel and this new condition is annotated on the "RCC Input" of the RCD-1; it will be the responsibility of the receiving section to:

NOTE: This paragraph and subparagraphs a. through c. are applicable only for Type A Inquiry.

a. Circle the CND entry on the SAD-2 and annotate the correct Condition Code within the circle.

b. Line out the Condition Code printed on the SAD-2.

c. Line out the location(s) printed in the "Locator Answer" of the SAD-2.

8. Shelf-Life Items. Ensure that for all shelf-life materiel received, the Stow Action Document, appendix F-202, has a Shelf-Life Code indicated. The first inspection date (month, year), expiration date (month, year), and Lot/Contract Number and Indicator, when applicable, will be entered on the Stow Action Document in the appropriate blocks. Materiel received without an expiration/test date on containers will have this date computed from date of manufacture plus term indicated by the Shelf-Life Code. When the Stow Action Document had a blank Shelf-Life Code, the inspector will determine the appropriate code using personal experience, knowledge of item, available technical data, or by querying the IM. Enter the appropriate code. Mark or arrange for marking the materiel/container IAW MILSTD 129 before release to storage.

c. Bulk receipts or multiple boxes of the same NSN unloaded at central receiving are on pallets and moved to bulk staging area require the same processing (documentation, verifying, inspection, and so forth) as the bin type items on the MMHS conveyor system.

d. When the volume of inquiries (Type A) warrants, PMR data and locations for receipts can be obtained from the computer by card input. Appendix B-102 and appendix E-102 P provide instructions for preparation of the Receipt and Locator Inquiry Card, DIC ZB6, input. Enter date of receipt marked on container when offloaded as noted in subparagraph b(1) above.

e. Bulk receipts offloaded directly to the warehouse storage location:

(1) At central receiving area, obtain freight bill, check seals, annotate on freight bill if seals are broken or missing. Open truck/car. Remove receiving document, DD Form 250, DD Form 1348-1, and so forth, from container. Circle on the receipt document all the data that is available for a Type A inquiry. Add date of receipt as follows:

(a) Bulk railcar receipt day will be the date carrier releases railcar to the depot, i.e., car is dropped by carrier on depot yard track.

(b) Bulk truck receipt day will be the date van is available for unloading at the depot offloading dock, e.g., driver present waybill(s), van available for spotting at a dock.

(2) At a remote inquiry station, make a Type A inquiry (or DIC ZB6 Card input) to obtain PMRC data, contract data, if applicable, and potential location.

NOTE: The use in this procedure of a Type B inquiry of DIC ZBJ Card input, in lieu of a Type A inquiry to obtain potential locations, is an unauthorized circumvention of the DLA Suspended Receipt Process.

(3) Receive receipt document package from the remote terminal inquiry operator. The document package will consist of two copies each of the Receipt Control Document and (if item is procurement) a Contract Data Sheet when available, plus a Stow Action Document. The RCD and CDS will be utilized to accomplish the necessary inspection and furnish an RCC coding from for suspended receipt update. The Stow Action Document (SAD) will be used to supplement inspection actions and to act as a coding form for the required Stow Notice and temporary location label when required. Forward documentation package with bulk receipt to Warehousing Division, applicable Area Control Branch.

(4) Offload vehicle, tally-in materiel, making a total piece count and checking for discrepancies incident to shipment. Perform inspection services as detailed in subparagraph b(13) above. If required, release carrier.

f. The following special instructions are outlined to assist Receiving and Warehousing Division personnel in completing/annotating the receipt document package. Actions or reviews described are not necessarily listed in a mandatory sequence. They (the described processes) are offered as guidance indicating the steps required to review, inspect, inquire, and accomplish the receipt and location annotations necessary to confirm the receipt in a timely manner.

(1) The Receipt Control Document (RCD), appendix F-200 will be output at the remote terminal. This document will be machine generated in two basic formats; PMRR Available and No PMRR Available. Each of these basic catagories will be presented as two different documents to accommodate the various types of Receipt Confirmation Card inputs, reference appendix B-108 and B-109. The Document Identifier Code will appear in the "RCC Input" portion of the RCD to identify the nature of the required receipt action.

(a) Mandatory, as well as optional, entries for RCC inputs identified as DIC ZV_ (PMRR available) will be entered IAW appendix E-108 on the RCD in the space provided in the RCC input portion of the form DIC (two positions of DIC and TP Control Number will be machine entered).

Quantity
Weight
Warehouse Area (WHSE)
Discrepancy Code (DISCR)
DICOMSS Unit Price (DIC ZX, Non-Perishable, Brand Name Items Only.)

(b) As necessary, the following optional elements will be annotated on the RCD.

1. Condition Code (COND). IMPORTANT: If changed, make matching alteration to the SAD condition and line out all location data. MMD will reflect input condition and associated locations assigned.

2. Management Code (MGT). Code M will be automatically assigned and printed in the RCD if Condition Code H was entered on the Type A or DIC ZB6 Receipt Inquiry. If item is to be destroyed, MGT Code M must be changed to J.

3. Contract Line or Supplementary Address (CLIN or SUPP ADD, respectively).

4. Unit of Issue (U/I).

5. Federal Supply Class (FSC).

NOTE: Steps 6, 9, 10 and 11 are not applicable for DICOMSS, instead refer to 11 and 12.

6. Shipment Number (SHIPMENT NO) or Signal (SIG CD), Fund (FUND CD) and Project Code (PRJ CD). If receipt is procurement, the shipment number will be entered, if available to ensure that the appropriate acceptance report can be automatically generated. When shipping document DD Form 250/1155 is not available or does not reflect a shipment number, a zero fill shipment number will be required with the PMR entry. If the RCD reflects DIC ZV_ and the Management Code is D or F, Quantity Shipped and Administering Location Code entries may also be required. The automated or hard copy Contract Data will indicate the Administering Location Code or Contract Administration Service Code as outlined in DoD 4105.59-H. If the RCD reflects DIC ZX_ only, the

shipment number and Administering Location Code entries must also be entered when appropriate. Inspection personnel must pay particular attention to procurement receipts without advance receipt data (PMRC) as only the Contract (hard) copy will indicate destination acceptance and, therefore, mechanical validation cannot ensure that sufficient data is available to output the required Acceptance Report, DIC PKP or PKN.

7. Suffix Code (SFX CD). Enter appropriate suffix IAW instructions in appendix B-108.

8. DICOMSS Indicator - Enter "D" only when required, to reflect receipt of DICOMSS item.

9. Shipment Number Suffix (SHIP SFX). Enter Vendor Code from shipping document. This entry must be separate from, and not combined with, the shipment number.

10. Administering Location Code. This code is required when the PMR specifies destination acceptance (Management Code D or F). If analysis of the contract indicates payment will be made by other than a DCASR, i.e., a DSC is the payment office, the Administering Location Code will be "XXX".

DoDAAC OF CAO/ PAYMENT OFFICE	ADMINISTERING LOCATION CODE
S1102A (DCASR Atlanta)	001 thru 016
S2202A (DCASR Boston)	020 thru 037
S1402A (DCASR Chicago)	040 thru 049
S3602A (DCASR Cleveland)	050 thru 062
S4403A (DCASR Dallas)	070 thru 079
S0506A (DCASR Los Angeles)	102 thru 119
S3303A (DCASR New York)	121 thru 133
S3910A (DCASR Philadelphia)	142 thru 155
S2603A (DCASR St. Louis)	160 thru 172
No DCASR Payment	XXX

This conversion will be automatic and will assist in generating the Acceptance Report when the PMR record specifies destination acceptance. The Administering Location Code may be found on the Contract Data Sheet, F-201, under header "ADM". The DoDAAC of the DCASR will be found on the DD Form 250/1155 in the "Payment Will Be Made By" block and must be manually converted to the appropriate Administering Location Code for entry on the DIC ZV_/ZX_ RCC. This entry is provided for all RCC output regardless of the availability of a Prepositioned Materiel Receipt Card. When XXX is entered in lieu of an Administering Location Code, no Acceptance Report will be prepared. A record of the action will be output IAW appendix F-204.

NOTE: If the Administering Location Code entry on the RCD is alpha, alphanumeric or numeric greater than 172, i.e., LPP, LPE, LA1, LB1, 354, 260, etc., further entry or change is not required. The presence of these codes in the receipt record will not result in the output of an Acceptance Report or require entry of a Quantity Shipped.

11. Quantity Shipped. Entered in the RCD only for DIC ZV_ inputs as insufficient space precludes further data additions to the DIC ZX_ RCD format. The Quantity Shipped may be different than the Quantity Received as the former is expressed in Purchase Units and the latter in Units of Issue. When both are equal, the quantities are the same. Quantity Shipped will be a mandatory entry when the PMR record indicates destination inspection unless the Administering Location Code is XXX or other than 001 through 172.

12. Unit Price - Represents the DICOMSS Unit Price. DICOMSS RECEIPTS will be processed under Type K Inquiry controls and the PMR Unit Price will be displayed. This price will be compared, at time of receipt inspection, to the DPSC Form 300-M appropriate contract line price.

13. DICOMSS - VPR - DICOMSS Variable Price Reduction. The vendor discounted price and is highlighted on the DPSC Form 300-M. This display field requires a valid entry for all DICOMSS receipts. VPR Price Entries must be seven positions in length, composed of two dollars and five decimals (through 5th position is a constant zero fill). The VPR entry may never exceed the DICOMSS Unit Price (UNIT-PRICE) value. If the DICOMSS-VPR is equal to the Unit-Price (no highlighted DPSC Form 300-M VPR data) any of the following entries are satisfactory:

a. "S" in the first position of DICOMSS-VPR field.

b. SAME may be entered in the first through fourth positions of the DICOMSS-VPR field, or

c. A price, equal to the Unit-Price data; zero fill preceding positions when required, (i.e., 01.00000,00.55500).

(c) The above annotations will apear on both copies (white and pink) of the RCD. When completed, the RCD will be forwarded as follows:

1. The white copy to Receipt Documentation for input via remote terminal or batch as necessary.

2. When no PMR record is available, the RCD (two copies) and the SAD (two copies) will be produced. The Receipt Control Document will indicate "No PMR Record" and the RCC input line will reflect a long-form confirmation format IAW appendix B-109. The inspector will use the "RCC Input" area as a coding form and annotate the applicable data opposite the printed headers.

(a) No Contract Data Sheet will be printed for procurement receipts, DIC ZX_, which do not reflect a PMR Record.

(b) The inspector will ensure that both the Stow Action Document (SAD) and the RCD contain or reflect the same TP Control Number. This number will appear in the upper right-hand corner of the SAD or RCD for document matching.

(c) Specific instructions relative to the required annotations and use of the coding format for either procurement (DIC ZX_) or other than procurement (DIC ZY_) are to be found in appendix E-108 P.

(3) The RCD within the PMR response line reflects the RCC due date. This date is automatically computed and represents the point-in-time that the receipt must be confirmed and stowed to prevent a late receipt action.

(4) Regardless of whether or not a PMR Record was available, if the Type Pack, PIIN or Document Number, the NIIN, the Supplemental PIIN, or the Date Received are found to be in error the following actions will be taken.

(a) If the materiel and documentation have not been released to Storage Division, the Suspended Receipt Record will be deleted using the inputs of appendix B-43 or B-97, and processed IAW appendix E-182 P. A new type A or ZB6 inquiry will then be initiated IAW appendix E-102 P and the new receipt documents will be used.

(b) If the materiel and documentation have been released to Storage Division and the data element to be changed is Type Pack, PIIN, or Document Number, or Supplemental PIIN, the RCD will be clearly annotated to indicate the correct data element and ZZR will be printed in red letters above the heading of the changed element.

(c) If the materiel and documentation have been released to Storage Division and the NIIN or Date Received is to be changed, the Suspended Receipt File record will be deleted and a new Type A or ZB6 inquiry will be processed. As soon as the new RCD and SAD are received and annotated immediate action will be taken to obtain and destroy the copies of the RCD and SAD in Storage Division and replace them with a copy of the Receipt Document and two copies of the Stow Action Document.

(5) Suffixed Receipts:

(a) If the quantity of a receipt exceeds 99,999 (and less than 10,000,000 only and one Condition Code applies, the actual quantity should be entered and no Suffix Code entry is necessary. The receipt overage indicator must be marked with an "X" if either the weight or the quantity exceeds five positions of data; i.e., 99,999. This X in the OVR portion is required in either the DIC ZV/ZW or DIC ZX/ZY RCC input. Failure to do so will result in a violation reject. Reference appendix E-108 P/V.

(b) If a receipt is found to be in two or more conditions, a Type A inquiry would be processed for each additional Condition Code. For example, if the Condition Code A was shown on the RCD and it was found that a portion of the materiel was Condition Code B and the remainder was Condition Code K, one additional Type A inquiry would be made. The Condition Code on the original RCD would be changed to B and Suffix Code A would be entered. On the RCD resulting from the additional Type A inquiry, Condition Code K and Suffix Code B would be entered. If it should happen that a receipt split for two or more Condition Codes had one segment of the receipt with a quantity greater than 99,999, the high quantity segment should always receive the last Suffix Code assignment. If the K portion of the receipt mentioned in the example above had a quantity greater than 99,999, the necessary additional Suffix Codes would then be assigned automatically by the computer beginning with Suffix B.

(c) Related copies of RCD for suffixed receipts should be forwarded to Receipt Documentation Branch together to facilitate verifying suffix code assignments.

g. Inspectors will review all documents to be released to Warehousing Division to assure matching TP Control Number and dates of receipt are the same in the RCD and the SAD. In addition, the receipt personnel will ensure that the date of next inspection, date of pack, etc., are entered into the Stow Action Document IAW appendix E-110 P.

(1) Forward materiel, one copy of the RCD, and both copies of the SAD to appropriate Warehousing Division, Area Control Branch (ACB).

(2) Do not forward Contract Data Sheet as a portion of Warehousing's document package. The CDS will be destroyed after the RCC is accomplished.

h. Storage of Receipts - Warehousing Division will:

(1) Receive materiel with RCD; store materiel in location furnished on the Stow Action Document IAW appendix E-110 P. Accomplish Storage Action no later than due date (DUE) appearing on the SAD to prevent a late receipt, and whenever possible, expediting the stow action on those items annotated EXPEDITE-B/O PENDING. The DUE date represents the number of days between Date of Receipt and a future date after which the receipt is late in process.

(a) Request Type B inquiry for additional location. This inquiry will be mandatory when receiving has changed the Condition Code of inquiry. This action will be represented by a Condition Code change of the RCD-1 (new Condition Code entered), and the Condition Code field of the SAD-2 circled and lined out. Location data, if available, will also be lined out. The new condition will appear within the circle of the condition of the SAD-2 locator answer.

(b) Choose a vacant location in the same area as the prime bulk/bin location.

(c) Move materiel to appropriate warehouse location for storage.

(2) Complete the Stow Action Document as follows:

(a) Review the copy of the RCD. If Type K Inquiry utilized refer to MMD, in place of RCD. If no basic locator record was available at the time of receipt inquiry, the RCD/MMD will reflect the receipt inspector's annotations, i.e., FSC, condition, etc. which may assist in determining the appropriate storage area.

(b) When materiel was stored in location shown on the form, circle location used. Circle the Teleprocessing (TP) Control Number on the stow notice sign and date IAW local procedures.

(c) When materiel was stored in location provided by a Type B inquiry, annotate the SAD, sign and date IAW local procedures.

(d) When materiel was stored in a vacant location, enter location used, Type Storage Code, Unit Pack, and Action Code on the stow action input section of the SAD, sign and date IAW local procedures.

(3) Receipt inspection of Procurement Items.

(a) A Contract Data Sheet (CDS), reference appendix F-201, may be produced for a procurement receipt inquiry when a PMR is available and matching contract exists. The Type A inquiry uses NIIN and PIIN (last five) in general to match the PMR File. If the CLIN was supplied via the receipt inquiry, this also will be used to find the matching PMR record and in turn, the matching contract data.

(b) As previously stated, the CDS will be output at the remote terminal in conjunction with the Receipt Control Document (RCD) and the Stow Action Document (SAD). Both copies of the CDS will be forwarded with the other documentation to the receipt inspection area.

NOTE: The operator in charge of the remote receipt inquiry terminal will ensure that the RCD, CDS and the SAD documents are placed with the proper receipt and matched to each other by the TP Control Number printed in the top right-hand corner of each document, IAW the provisions outlined in appendix E-102 P.

(c) Receipt inspectors will check the receipt line number to ensure that it agrees with the CLIN reflected in the Receipt Control Document and Contract Data Sheet.

(d) Review the Receipts History Line on the CDS for evidence of previous receipt activity. If more than three receipt records are indicated, it will be necessary to prepare an additional receipt history inquiry IAW format in appendix B-69, Type E inquiry.

(e) When the message line indicates additional partials are on file, it will not be necessary to inquire Suspended Receipts File to determine if the same CLIN is in process, i.e., the CDS message, additional partials on file, refers to suspended receipt actions with the same PIIN, NIIN and CLIN as the new receipt.

(f) If the Contract Data Sheet does not exhibit the correct CLIN, reinquire contract data, using the format outlined in appendix B-68, Type C inquiry, to obtain the proper matching contract data.

(g) Accomplish the receipt inspection when all necessary data is available, and/or additional inquiry responses received--refer to appendix F-201, Contract Data Sheet, for specifics.

NOTE: Receipt history and contract data information is available at all remote terminals designated to accept entry of program $$UWRT10 IAW appendix E-194 P.

(4) Distribute receiving documents as follows:

(a) Forward one annotated copy of RCD, together with a copy of the CDS, to remote terminal for processing or keypunch.

(b) Forward one copy of RCD together with both copies of the SAD to Warehousing Division, appropriate Area Control Branch.

(c) When materiel was stored in an established location, destroy the second copy of the RCD after appropriate review, and the extra copy of the SAD. Forward original copy of SAD to the remote terminal for input of short form, Stow Notice, IAW appendix E-110 P.

(d) When material was stored in a new location, use second copy of SAD as temporary label. Upon receipt of matching label, destroy suspense copy. Forward original copy of SAD for input if long form, Stow Notice, IAW Appendix E-110 P.

i. Discrepancy Reporting. Reports, when applicable, will be attached to the receiving document and furnished to the Receipt Documentation Branch. Instructions for discrepancy reporting are found in the following E appendices:

(1) Appendix E-150 P, Procedures for Preparation of Report of Discrepancy, SF 364. Used for discrepancies that are the responsiblity of the shipper and packaging, packing and marking deficiencies.

(2) Appendix E-155 P, Procedures for Initiating SF 363, Discrepancy in Shipment Confirmation. Used for discrepancies that are the responsibility of the shipper.

(3) Appendix E-156 P, Procedures for Initiating Discrepancy in Shipment Reports, SF 361. Used for discrepancies that are the responsiblity of the carrier.

j. Confirmation of Receipts Receipts Documentation Branch will:

(1) Receive receiving document (DD Forms 250, 1348-1, and so forth), and a copy of the RCD and CDS from Operations Branch.

(2) Complete the Receipt Confirmation as directed by appendix E-108 P.

(3) Forward Receipt Confirmation, appendix B-108 or B-109 to ODS for processing of confirmation to DSC/ICP.

(4) Place receipt document(s) (DD Form 250, Form 1348-1, etc) and copy of Receipt Control Document in completed Receipt Confirmation File, retain three months, then destroy.

k. Additional receiving processes.

(1) Processing of lost receipts.

(a) Receipt Documentation Branch will:

1. Determine receipt is lost from review of the Late Receipt Report, appendix F-71.

2. Inquire the Suspended Receipt File IAW appendix E-165 P to determine the last status of the receipt.

3. If the Receipt Confirmation Card (appendix B-108 or B-109) had been processed, determine if the materiel is still in the receiving area. If found, expedite release of materiel and documentation to warehousing.

4. If no Receipt Confirmation Card (appendix B-108 or B-109) had been processed, determine if the materiel and documentation is still in the receiving area. If found, process the Receipt Confirmation and expedite release of materiel and documentation to warehousing.

5. When it appears that the lost receipt has already been forwarded for stowage advise Storage Division of the area to which the receipt had been forwarded (from the Receipt Control Document, appendix F-200, or Suspended Receipt File Inquiry response) and request a search for the materiel be conducted.

(b) Storage Division will:

1. Initiate a search for the lost materiel and/or receipt documentation in the area to which the receipt had been forwarded by receiving Division.

2. If not found, a Type B inquiry will be processed for all locations of the item. A copy of the inquiry response will be forwarded to all Area Control Points in which active locations for the item are recorded.

(c) Area Control Points will:

1. Conduct a search in all recorded locations upon receiving request.

2. If receipt is found, enter location on the inquiry response, sign, and date.

3. If receipt is not found, annotate "Cannot be Located" on the inquiry response, sign, and date.

4. Return annotated inquiry response to Storage Division Office upon completion of search or not later than 48 hours after receipt.

(d) Storage Division will:

1. If receipt has been found, notify Receipt Documentation Branch and process Receipt Stow Notice (appendix B-46 or B-144) IAW appendix E-110 P.

2. If receipt is not found, annotate the Type B Inquiry response and forward to Physical Inventory Branch.

(e) Physical Inventory Branch will:

1. Receive annotated inquiry response. Conduct thorough search for the materiel in all locations or former locations using F-51 and F-52 listings.

2. If receipt is found, notify Receipt Documentation Branch and Storage Division, and take action to assure the Receipt Stow Notice (appendix B-46 or B-144) is processed IAW appendix E-110 P.

3. If receipt is not found, annotate inquiry response and return to Receipt Documentation Branch within 48 hours.

(f) Receipt Documentation Branch will:

1. If receipt was found and no Receipt Confirmation Card (appendix B-108 or B-109) had been processed, process Receipt Confirmation Card IAW appendix E-108 P.

2. If receipt was not found, and Receipt Confirmation Card had been processed, process a Suspended Receipt File Maintenance Card (appendix B-145) IAW appendix E-162 P to enter Management Code L.

3. If receipt was not found and no Receipt Confirmation Card had been processed, process Receipt Confirmation Card with Management Code L.

4. Retain research records for one year as background for potential Report of Survey.

5. Immediate action will be taken by the Chief, Receiving Division, to notify the DSC in writing of the exact quantity, NSN, and PIIN/Document Number of the receipt if the materiel is found after transmittal of the Materiel Receipt Card and prior to the Request for Report of Survey from the DSC.

(2) Processing receipts from Shipment Diversion. A Shipment Diversion receipt of materiel by the alternate consignee depot requires an entry of the Reverse Billing Code in the Receipt Confirmation Card (appendix B-108 or B-109).

(3) Processing receipts of Army-owned rotated reserve stocks - Nonperishable subsistence.

(a) Annually, the Army rotates components of 21 B rations by releasing selected quantities from commercial cold storage. In addition to the PMRC, DPSC will inform the concerned distribution points of the items and quantities that will be released. These stocks can be identified by Project Code 2Q1.

(b) In addition to the normal receipt processing, these stocks should be identified by affixing DPSC Form 3281, which indicates that the item was held under controlled temperature conditions and should not be considered overage due to date of pack.

APPENDIX E-050 P

FMS NOTICE OF AVAILABILITY REPLY DOCUMENT

1. INPUT DOCUMENTS

a. Appendix B-57, FMS Notice of Availability (NOA) Reply Document, DIC AD5.

b. Appendix C-41, Notice of Availability/Shipment Document, DD Form 1348-5 (third copy).

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-75.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for processing responses to NOA Key and Detail Documents. The NOA Reply Document may be either mechanized, appendix B-57, or manual, appendix C-41. The Commercial Traffic Branch is responsible for processing and responding to all NOA Reply Documents.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. The FMS NOA Reply Document, DIC AD5, will be received only in response to a mechanized NOA Key Document, DD Form 1348m (appendix B-53). When the AD5 document contains Code R in pos. 60, the shipment release is to be made to the addresses identified by coded entries in the Military Assistance Program Address Directory (MAPAD); when shipment release instructions are being mailed under separate cover, the AD5 document will contain Code E in pos. 60. The shipment release instructions which are mailed will be received in written format by letter, country designed forms, or other appropriate communications; however, such instructions must reach the shipping activity within 15 days of the NOA Date Offered when the NOA Offer/Release Code (pos. 46) Y applies; otherwise, the shipment will be released automatically to the appropriate MAPAD address.

b. NOA Replies in response to a manual NOA/Shipment Document, DD Form 1348-5, will be effected by the CR/FF returning the third copy of the DD Form 1348-5 with release instructions annotated thereon.

c. When the NOA Reply, either mechanical or manual, rejects a part of a consolidated Shipment Unit, the shipping activity will withdraw the rejected materiel and process as instructed in part 6, appendix E-053 P, of this volume.

d. To expedite release authority and facilitate electrical transmission of DIC AD5, FMS NOA Reply Document, defense depots will perpetuate the Customer Transportation Order Number from pos. 40-44 of the DIC AD5 into the last line of the "Mark For" data. Further, should a Customer Transportation Order Number be received via means other than DIC AD5, i.e., DD Form 1348-5, manual NOA or correspondence, it will be perpetuated into the last line of all "Mark For" data or become the "Mark For" data, as applicable.

APPENDIX E-051 P

CONTROL OF SUPPLY DOCUMENTS BETWEEN THE OPERATIONAL DIRECTORATES AND THE OFFICE OF DATA SYSTEMS

1. PURPOSE

This procedure prescribes the controls to be maintained over the flow of supply documents input from the Operational Directorates and the ODS and the output and distribution of resulting products.

2. RESPONSIBLE ORGANIZATIONAL ELEMENTS

All Activities which input products to the ODS, and the ODS.

3. PROCEDURES/INSTRUCTIONS FOR PROCESSING OF REPORT

a. This system is established to provide procedural guidance for the "batching" of supply documents and the controls for input-output between local functional organizations and ODS.

b. All documents produced under the MOWASP System will be forwarded between functional organizations in batches prefaced by cover sheet. Date and time of receipt/dispatch and appropriate ODS Job Number if applicable will be indicated.

c. Definitions.

(1) Supply Document - For purposes of this procedure, any MOWASP document or transaction identified by a DIC contained in DLAM 4140.2, Volume III, appendix A-1, and pertinent chapters, and DoD 4500.32-R, MILSTAMP, appendix B-1.

(2) Batch - For purposes of this procedure, a term applied to any specific group of EAM Cards or source documents with the same DIC and addressee and preceded by the same header card when routed or transmitted.

(3) Routing Control Sheet - A routing document prefacing each batch of documents sent to ODS by functional elements of the depot.

(4) MOWASP Document Control Register - A record of document batches dispatched or received by organizational entity (Functional Routing Code assigned) on a daily basis.

(5) Functional Routing Code - A two-digit alphanumeric code used to identify an organization responsible for data input to the computer and/or receiving output produced as a result of the input or as scheduled in the Reports Format File.

(6) PCAM Job Instructions - A set of instructions specifying column entries to be punched in EAM Cards to accomplish a desired action.

(7) Job Number - A reference number assigned to a PCAM Job Instruction or other internal procedure used to identify the processing to be accomplished by ODS.

(8) Supply Document Delivery Points - The area or warehouse office to receive delivery of documents.

d. ODS will:

(1) Prepare a Data Systems Routing Control Sheet for each batch of documents forwarded from Operations Division to other functional branches of the depot.

(2) Provide a "Job Number" for PCAM Job Instruction for each Keypunching or other processing requirement developed and identified by the operating functions.

(3) Perform processing required and forward completed input-output as indicated by the Job Number.

(4) Stamp date and time received on each control sheet received.

(5) Retain documents and tapes as required to maintain restart/recovery capability in accordance with DLAM 4745.1, Chapter III.

e. DS/T will:

(1) Prepare a Data Systems Routing Control Sheet for each batch of documents generated or requiring processing; Job Number, date, and time of dispatch will be indicated.

(2) Log in/out each batch of punched cards transferred between depot operating elements on MOWASP Document Control Register.

(3) Establish requirements for new PCAM or computer jobs necessary for efficient operation, and forward to the Office of Plans and Management for review and coordination.

f. MOWASP Document Control Register - Enter the following data:

(1) Julian Date.

(2) Control Number - Office Symbol or Functional Routing Code followed by daily serial number - 001, and so on.

(3) Time Forwarded, or

(4) Time Received.

(5) Document Identifier Code - of batch concerned.

(6) Job Number, e.g., UW SS14.

(7) Remarks - Addresses or Sender (quantity, and/or source document provided).

g. Data Systems Routing Control Sheet - Enter the following data:

(1) DATE: Julian Date of dispatch.

(2) TIME: Time of dispatch.

(3) FROM: Functional Routing Code or Office Symbol of organization forwarding the documents.

(4) TO: Key Punch, Whse 16, T-101.

(5) TYPE OF DOCUMENT: DIC or title.

(6) CARD COUNT: Actual number of documents in batch.

(7) REMARKS: Job Number will always be shown; other remarks as appropriate; i.e., DLA addressee; cancellation; document number of prime document or source document.

APPENDIX E-052 P

EMERGENCY ITEM LOCATOR RECORD, ITEM LOCATOR TRANSACTION LISTING, AND LOCATOR FILE OVERFLOW LOCATIONS

1. REPORTS USED

a. Appendix F-51.

b. Appendix F-52.

c. Appendix F-96.

2. PURPOSE

a. The Emergency Item Locator Record (semiannual) F-51, provides emergency capability for processing MROs and Receipts. (When computer processing cannot be effected.)

b. The Item Locator Transaction Record (semimonthly) F-52, used in conjunction with the F-51, provides current item locator data for emergency conditions and enables research of transactions.

c. The Locator File Overflow Locations (semimonthly) F-96, provides a listing of all stock numbers on the Locator File, which have 30 or more sublocations.

d. Appendix F-51 and F-52 may be produced onto microfiche where facilities are available.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. ODS.

b. Shipping Documentation Branch.

c. Area Control Branches.

d. MOWASP Data Control Branch.

4. PROCEDURE FOR REVIEW AND PROCESSING

a. F-51 and F-52 reports

(1) This appendix provides instructions that MROs will be screened against the F-51 and F-52 reports by the Shipping Documentation Branch, Shipping Division during emergency conditions when the computer is not available to obtain necessary data for the preparation of the DD Form 1348-1. When

preparing the MROs, three locations will be entered on the DD Form 1348-1; one prime location (block F) and two alternate locations (block W, when available), using the following criteria:

NSN
Condition
Type of Packing (pos. 73 when applicable)
Oldest Date of Pack when F or G are not present in pos. 72 (Management Code)

NOTE: When F or G appears in 72, supply materiel available within meaning of code. When pos. 72 contains A, H, R or U, check pos. 73 for Management Code F or G.

(2) These reports will also be utilized to locate materiel upon receipt and to research for errors.

b. F-96 report.

(1) The Locator File Overflow Locations Report provides a listing which is retained by the Area Control Branches for the purpose of obtaining locations which are in excess of 30 that cannot be obtained by the remote inquiry.

(2) This report may be used for research, rewarehousing requirements, and selecting stock for shipment

c. MOWASP Data Control may review the various data elements on the F-51, F-52, and F-96 reports for correctness and submission of required changes.

5. DISPOSITION OF REPORTS AFTER FINAL ACTION

a. F-51 - Destroy previous listing/microfiche(s) upon receipt of new listing/microfiche(s).

b. F-52 - Destroy upon receipt of new F-51.

c. F-96 - Retain for six months, then destroy.

APPENDIX E-053 P

NOTICE OF AVAILABILITY PREPARATION

1. PURPOSE

To mechanically prepare the Notice of Availability (NOA) for eligible Foreign Military Sales (FMS) Shipment Units.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix B-53

b. Appendix B-54

c. Appendix B-66, Part E

d. Appendix D-132

e. Appendix F-64

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Directorate of Storage and Transportation, DS/T.

4. PROCEDURES

a. General. When an eligible FMS Shipment Unit is offered to transportation, the mechanized NOA will be generated from resident computer data in either card image for automatic transmission to those countries with transceiving capability or in the manual NOA format for distribution to the country by mail.

b. Process Initialization. An offer to transportation of an eligible shipment unit will identify the requirement for the preparation of a NOA. The offer may be accomplished through MOFAST processes or input of an MRO Control/Status Request Card (ZBM) or a Shipment Unit Completion Card (ZBP).

c. NOA Preparation.

(1) Transceiver Data. Transceiver data will be formatted as NOA Key Documents (AD1) or Export Release Key Documents (ADR) for Shipment Units and NOA Detail Documents (AD2) for line items within the Shipment Units. These formats will be prepared for automatic transceiving with data obtained from the Shipment Unit/Line Item File and require no operator input.

(2) Manual NOA (mailed).

(a) The Manual NOA form (appendix C-41) describing the Shipment Unit is also prepared mechanically with data obtained from the Shipment Unit File and supporting Address and Table and Control Files.

(b) This process will enter all data elements on the form which are required to be completed by the shipper. However, incomplete data in the Address File or Table and Control File may cause missing elements on the form. This form must be reviewed by the operator and if the form is incomplete, the missing data must be annotated manually and the supporting data files updated.

(3) Followups. Original NOA preparation dates are maintained by the computer so that subsequent followup transceiver data and manual NOA data may be prepared automatically. The Delay Key NOA (AD3) and the Delay Detail NOA (AD4) are automatically transceived and the manual NOA will be annotated as a followup. This will occur if the Shipment Unit File has not been updated to indicate shipment between the original submission of the NOA and the required followup period.

(4) Processing Actions.

(a) The applicable NOA will be computer generated in a batch mode. The manual NOA will be distributed the following day to the responsible organization for distribution to the CR/FF and the mechanical NOA will be automatically transceived.

(b) All computer generated NOAs will be listed on the F-64, NOA Status List. The F-64 should be reviewed daily to monitor the NOA process and perform the subsequent processing actions described on the F-64.

d. Amendments to NOAs. If an amendment to an NOA is required, it must be prepared manually with data extracted from the MRO. These amendments will be prepared in the same formats as the original NOA.

APPENDIX E-054 P

TAC UPDATE/INQUIRY

1. PURPOSE

To establish and maintain files which contain TAC data.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-282

b. MILSTAMP 4500.32R, Volume II

(1) Navy TACs - Chapter 7, Section 2

(2) Coast Guard TACs - Chapter 7, Paragraph 9-3

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General. This procedure provides instructions for accomplishing table and control file maintenance of Transportation Account Codes (TACs) on-line to support all shipping programs in the MOWASP System.

b. CRT Initialization.

(1) Key in $$UWTT41. Depress ENTER key.

(2) The panel for maintaining TAC data will be displayed, see figure 1 below.

(3) To inquire the TAC File, key in Transaction Code I, TAC key and depress ENTER key. If on file, the screen will display the TAC for the TAC key. If not on file, the TAC record not found message will be displayed and the cursor will be moved to Action Code field. TAC keys are as follows:

(a) Navy TACs - TAC key equals two positions Material Cognizance Codes followed by blanks.

(b) Coast Guard TACs - TAC key equals last five positions of the Activity Address Code.

(c) To add a TAC, enter Transaction Code A, TAC key, TAC and depress the ENTER key. If successful, the entry will be displayed on the lower TAC key and TAC field until another action is entered.

(d) To delete a TAC, enter Transaction Code D, TAC key and depress the ENTER key. If successful the entry will be displayed on the lower TAC key and TAC field until another action is entered.

(e) This transaction provides the capability to establish and maintain files which contain TAC data. This data is used during the documentation process to assign TACs to eligible Shipment Unit records.

5. ERROR MESSAGE/ACTION

Messages will be displayed at the bottom of the panel. If an error is made the cursor will return to the field where the invalid data was entered.

ERROR MESSAGE	CAUSE/ACTION
TAC KEY NOT ENTERED	Probable Cause: Self-explanatory. Action: Mandatory entry, TAC key must be entered.
TAC BLANK - ADD NOT ALLOWED	Probable Cause: A blank TAC was attempted to be added. Action: A TAC be entered for all add transactions.
RECORD ON FILE	Probable Cause: An attempt was made to add a TAC that was already on file. Action: Determine the error and continue processing.
TAC RECORD NOT FOUND	Probable Cause: An inquiry or delete action was made against an unrecorded TAC record. Action: Research to determine if correct TAC was entered. If not, reenter.
VALID ACTION CODE	Probable Cause: When TAC - Action not equal to an I (Inquiry), A (Add) or D (Delete). Action: Determine the error and continue processing.
UWTT01-90 BAD RETURN FROM UWTT40-40	Probable Cause: System problem. Action: Notify supervisor.

APPENDIX E-055 P

DATA UPDATE TO THE IDC FILE FOR OPEN MRO(S) FOR NSN(S) UNDER INVENTORY

1. PURPOSE

This procedure prescribes the actions to be taken upon receipt of the F-72 and F-108, part 3, Reports for open MRO for NSNs under inventory. F-72 Report reflects open records on flag date and prior to cutoff date minus one. F-108, part 3, report reflects open records on the IDC file at COB the day preceding the cutoff date, which has not been updated by other actions.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-92

b. Appendix E-190 P

c. Appendix F-72

d. Appendix F-108, Part 3

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Warehousing Division and Inventory Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. The F-72 and F-108, part 3, Reports will be provided the Warehousing Division and the Area Control Branches for action as follows:

(1) Locate, identify, and accelerate picking action on each MRO indicated on the report. Accomplish Shipment Unit History update action in accordance with current procedures.

(2) Upon completion of above action, prepare input in accordance with appendix B-92 or E-190 P.

b. The Inventory Office will retain a copy of the F-72 and F-108, part 3, Reports for use as necessary in resolving discrepancies after reconciliation of adjusted count quantities and adjusted strike balances.

c. Warehousing Division will accelerate action on all MRO released prior to cutoff date shown on duplicate DD Form 1348-1 (ZUE) for NSNs under inventory in order to assure that stock is picked from the location and input data is provided in accordance with appendix B-92 prior to inventory count.

d. When the IDC file is updated through use of the teleprocessing unit, the F-72, F-108, and duplicate DD Form 1348-1 (ZUE) documents will serve as source documents for input of update data. The following data will be underlined:

(1) NSN

(2) Last four digits of document plus suffix, if applicable.

(3) Quantity shipped

If quantity shipped, denied, canceled, overshipped, or undershipped is different than quantity on report, then change as required and add status code.

APPENDIX E-056 P

DICOMSS RECEIPT - MRO QUANTITY BALANCE RECONCILIATION

1. PURPOSE

The creation of the F-145, part 6, listing is an indicator that there are problems with quantities of DICOMSS materiel causing residual stock. This procedure describes the action to be followed to correct problems identified by the F-145, part 6.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-20.

b. Appendix B-27.

c. Appendix F-145, Part 6.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

DICOMSS Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

The F-145, part 6 listing, applicable to DICOMSS depots only, is intended to provide an early warning of MRC/MROs which may have been lost from, or delayed in, transmission between the depot and DPSC. An F-145, part 6 report will be produced whenever four or more workdays have transpired between the time MOWASP released the MRC (appendix B-20) and DPSC/DICOMSS released the related MROs. All MROs and DIC CRS (appendix B-27) transactions will be summarized by NSN, Condition Code, and DICOMSS cycle code and the total quantity will be compared with the balance that has been recorded in the MRC. If an exact MRO versus MRC quantity match is made within the 4-day period, no entry will appear on the report. If the depot receives no MROs or an insufficient summary quantity after the 4-day period, a line entry will appear on the report. Whenever an entry appears, the DICOMSS Office must immediately initiate research to determine whether a system or procedural deficiency is the cause. Timely corrective action is necessary to preclude buildup of residual assets. Simultaneously with the depot investigation, DPSC-SSOSN (AUTOVON 444-2908) will be notified of the details released to the unmatched MRC. Under no circumstances will the depot automatically transmit a duplicate MRC or will DPSC automatically transmit duplicate MROs. Only after both activities have agreed will duplicate transactions be transmitted.

APPENDIX E-057 P

MEDALOC RECORD INQUIRY

1. PURPOSE

Provide the capability to inquire MEDALOC Shipment Units (SU).

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-80

3. RESPONSIBLE ORGANIZATION ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General. This process will perform any of the following tasks:

(1) Display a CDF record.

(2) Display a CDP record.

(3) Display a consolidated pack record.

(4) Display a pallet record.

b. CRT initialization.

(1) Key in $$UWSV48.

(2) Depress ENTER key. This will dedicate the CRT to MEDALOC Record Inquiry and display the following message:

UWSV48 MEDALOC RECORD INQUIRY

Enter ACT from one of the selections below:

By Pallet = PL
By Consolidate = CN
By CDP = CP
By CDF = CF

Enter SU number or TCN number for CDF records also enter SEQ number.

ACT_____ SU____ TCN____ SEQ____

(3) To access File Data Input will be required in the Field-S located on the last line of the above display as follows:

(a) ACT - Enter the action code desired (PL, CN, CP or CF).

(b) SU - Enter the shipment unit number desired.

(c) TCN - Enter the transportation control number desired.

(d) SEQ - Enter the sequence number of the desired CDF record.

c. Line Item Inquiry

(1) To access a CDF File record, the following entry is required:

"CF" in the ACT Field.
"SU or TCN Number" (7, 11, 13, or 16 positions) in the SU or TCN Field.
"Sequence Number" in the SEQ Field.

DEPRESS ENTER KEY

(2) Successful entry of the data will result in the display of the applicable CDF record. See Figure 1 for example.

d. Shipment Unit Inquiry

(1) To access a CDP File Record, the following entry is required:

"CP" in the ACT Field.
"SU or TCN Number" (7, 11, 13 or 16 positions) in the SU or TCN Field.

DEPRESS ENTER KEY

(2) Successful entry of the data will result in the display of the applicable CDP record. See Figure 2 for example.

e. Consolidation Record Inquiry

(1) To access a CN File record, the following entry is required:

"CN" in the ACT Field.
"SU Number" in the SU Field.

DEPRESS ENTER KEY

(2) Successful entry of the data will result in the display of the applicable CN record. See Figure 3 for example.

f. Pallet Record Inquiry

(1) To access a PL File record, the following entry is required:

"PL" in the ACT Field.
"SU or TCN Number" (7, 11, 13, or 16 positions) in the SU or TCN Field.

DEPRESS ENTER KEY

(2) Successful entry of the data will result in the display of the applicable PL record. See Figure 4 for example.

NOTE: An SU Number can be 7, 11, or 13 positions. A TCN Number must be 16 positions.

5. ERROR MESSAGES	CAUSE/ACTION
INVALID ACT REENTER	Probable Cause: Wrong action code. Action: Verify and reenter.
SU NOT USED FOR PALLET INQUIRY -- USE TCN	Probable Cause: SU entered in lieu of TCN. Action: Verify and reenter.
ENTER TCN NUMBER	Probable Cause: TCN not entered. Action: Verify and reenter.
NO PALLET RECORD FOUND FOR THIS TCN	Probable Cause: Invalid TCN. Action: Verify and reenter.
INVALID CONSOLIDATED SU	Probable Cause: Invalid SU. Action: Verify and reenter.
ENTER SU OR TCN NUMBER	Probable Cause: SU or TCN not entered. Action: Verify and reenter.
NO CONSOLIDATED RECORD FOR THIS SU	Probable Cause: Invalid SU or SU not on a consolidation. Action: Verify and reenter.
NO CONSOLIDATED RECORD FOUND	Probable Cause: Invalid TCN. Action: Verify and reenter.

APPENDIX E-058 P

MEDALOC SHIPMENT INQUIRY

1. PURPOSE

Provide the capability to Inquire Data for MEDALOC Shipments received and shipped on a daily and month to date basis.

2. APPENDIX USED IN THIS PROCEDURE

Appendix B-143.
Appendix F-057.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General. This process will perform any of the following tasks:

(1) Display shipments received.

(2) Display completed shipment data.

(3) Display completed pallet data.

b. CRT Intialization.

(1) Key in $$UWSV47.

(2) Depress ENTER key. This will dedicate the CRT to MEDALOC Shipment Inquiry and display the following message:

MEDALOC SHIPMENT DATA UWSV41E

Options:

PD - Completed Pallet Data, daily.
PM - Completed Pallet Data, monthly.
SD - Completed Shipments, daily.
SM - Completed Shipments, monthly.
SR - Shipments received, daily and monthly.

Enter Option

(3) To access File Data for Inquiry, input will be required in the field located on the last line of the above display as follows:

Enter Option - Enter the file desired, see display above.

c. Shipments Received Inquiry

To access the shipment received file enter SR in the Enter Option Field and depress ENTER. See figure 1 for example.

d. Completed Shipments Inquiry

To access the completed shipments file enter SD for daily or SM for monthly in the Enter Option Field and depress ENTER. See figures 2 and 3 for examples.

e. Completed Pallet Inquiry

To access the completed pallet file enter PD for daily or PM for monthly in the Enter Option Field and depress ENTER. See figures 4 and 5 for examples.

5. ERROR MESSAGES/ACTION

ERROR MESSAGE	CAUSE/ACTION
INVALID OPTION REQUESTED	Probable Cause: Invalid Option Code. Action: Verify and reenter.
INVALID DEPOT CODE IN DEPOT TABLE	Probable Cause: Inquiry available only to DDTC and DDMP. Action: Verify and reenter.

APPENDIX E-059 V

MATERIEL RECEIPT CARD FOLLOWUP VIOLATIONS

1. INPUT DOCUMENT

Appendix B-59, MRC Followup

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-60

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of MRC Followups which have been rejected from computer processing. The Receipt Documentation Branch, Receiving Division will receive a Violation Printout, appendix F-85, for each violation for correction. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AB	Invalid RIC From
AI	Invalid Document Number
AY	Invalid Stock Number

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AB.

(1) REASON FOR VIOLATION/ERROR CONDITION

VRC AB indicates that data in pos. 67-69 (RIC From) is other than alpha/numeric.

(2) PROCESSING/RESEARCH REQUIRED

(a) Obtain a Prepositioned Materiel Receipt File Inquiry Printout, appendix F-1, and a Completed Receipt File Inquiry Printout, appendix F-29, and determine cognizant DSC by screening other relatable fields on the Violation Printout.

NOTE: Appendices F-1 and F-29 can be obtained by preparation and submission of Inquiry Cards, appendix B-61, using DIC ZB0/ZB1, both citing Action Code FN, appendix A-42. To obtain an immediate response from the PMR File and process a Type P Remote Inquiry in the format of appendix B-147.

(b) When the proper RIC From is ascertained, insert correct code in applicable fields (pos. 67-69) on the Violation Printout, appendix F-85 (see paragraph 5 below).

(c) In the event the correct DSC RIC cannot be ascertained, or file inquiry results in message "NO RECORD", take no further action.

b. VIOLATION REASON CODE AI.

(1) REASON FOR VIOLATION/ERROR CONDITION

VRC AI indicates that data in pos. 30-43 (Document Number) cannot be identified.

(2) PROCESSING/RESEARCH REQUIRED

(a) Make file inquiry using Action Code FP (see note in subparagraph (2)(a) above).

(b) File output will provide all records for the NSN, see appendix D-46. Enter the document number, pos. 30-43, in the Violation Printout, appendix F-85, applicable to the matching record shown on the file output (see paragraph 5 below).

(c) In the event file inquiry results in message "NO RECORD", take no further action.

c. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION

VRC AY indicates that data in pos. 8-20 (NSN) cannot be identified (contains blanks or alpha characters in other than pos. 14). (Alpha characters allowed are A, B, J, L or S.)

(2) PROCESSING/RESEARCH REQUIRED

For invalid alpha characters, pos. 14, inquire as directed in note above for DIC ZB1 by Document Number/PIIN for NSN data or pull hard copy contract, if available. If NSN cannot be identified, take no further action.

5. REENTRY INSTRUCTION

a. When the correct information has been determined, annotate the correction directly below the erroneous field using ink or a distinctive colored pencil.

b. Forward the annotated Violation Printout, appendix F-85, to the appropriate area for reentry.

APPENDIX E-060 P

SERVICE AND DISTRIBUTION/AUTODIN ROUTING INDICATOR CARD

1. PURPOSE

To prescribe local policy and method for processing Distribution/AUTODIN Routing Indicator Card.

2. FORM/REPORT USED

a. Appendix A-5.

b. Appendix A-10.

c. Appendix B-85.

d. Appendix E-143 P.

e. Appendix F-113.

f. ACP 117 CAN-US Allied Routing Indicator Book for obtaining Communication Routing Identifier Code.

3. REASON/CRITERIA FOR PREPARATION

Preparation and input of the ZF6 action is necessary to change, delete, or add to the Service and Distribution Codes and their respective Routing Indicator Code.

4. RESPONSIBLE ORGANIZATIONAL ELEMENT

Telecommunication Division, Directorate of Installation Services, or Digital Communication Branch, ODS.

5. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Source(s) of Information.

The sources of information are reflected by field legend and columns in appendix B-65.

b. Preparation of Form/Report.

Prepare local coding data sheet for ZF6, appendix B-65 format.

c. Signature/Approval Requirement.

Approval to be from the initiators immediate supervisor.

d. Distribution of Form/Report.

Forward completed local coding data sheet to ODS via keypunch service for input.

6. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE TO RETURNED FORM/REPORT

Keypunch service will return the local coding data sheet to the office of the initiator after keypunch action has been completed and the ZF6 input card forwarded to ODS for input to the computer.

7. DISPOSITION OF FORM/REPORT AFTER FINAL ACTION

Telecommunication Division will hold the local coding data sheet for 45 days and destroy.

APPENDIX E-060 V

SERVICE AND DISTRIBUTION/AUTODIN ROUTING INDICATOR CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-65, Service and Distribution/AUTODIN Routing Indicator Card, DIC ZF6

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-59

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for research correction, reentry, and/or deletion from the F-113 listing as appropriate for violation resulting from input of the ZF6 card. The Telecommunication Division, Directorate of Installation Services, or Digital Communication Branch, ODS is responsible for correction of errors and reentry of card as required. Reasons for violations are as follows:

FIELD POSITION(S)	VALIDATION
7	Numeric 1 or 2 Only
8	Alpha
9	Alpha/numeric
11-17	Alpha/numeric, no Blanks

4. PROCESSING/RESEARCH INSTRUCTIONS

a. Violation Reason(s).

Reason for violations and error conditions are self-explanatory as defined above and on the F-11 listing.

b. Processing/Research Required.

Processing personnel will receive the F-113 listing and compare the violation with the original source document and local coding sheet. Transition, typographical, and keypunch errors will be corrected and noted on the F-113 listing.

5. REENTRY INSTRUCTIONS

a. Submit a corrected local coding data sheet as outlined in appendix E-060 P, or annotate the corrections on the F-113 listing directly below the erroneous field using ink or a distinctively colored pencil.

b. Forward the ZF6 Card or annotated Violation Printout, appendix F-113, to the ODS, via keypunch services, for reentry into applicable process.

APPENDIX E-061 P

GENERAL PURPOSE RECEIPT INQUIRIES

1. PURPOSE

This procedure is to be used whenever it is necessary to obtain information from either the Prepositioned Materiel Receipt (PMR) or Completed Receipt Files.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-61, General Purpose Receipt File Inquiry.

b. Appendix B-68, Type C, Contract Data Inquiry.

c. Appendix B-69, Type E, Completed Receipt Inquiry.

d. Appendix B-147, Type P, Remote PMR File Inquiry.

e. Appendix D-46, PMR Inquiry.

f. Appendix D-47, Completed Receipt Inquiry.

g. Appendix F-1, PMR Inquiry Response.

h. Appendix F-29, Completed Receipt Printout.

i. Appendix F-205, Contract/Activity Data Response.

j. Appendix F-204, Acceptance Action/Inquiry Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

This procedure will be utilized by any organizational element requiring information from the PMR, Completed Receipt Files, or Acceptance Alert/Report records.

4. PROCEDURES/INSTRUCTIONS

a. PMR File Inquiries.

(1) Inquiries to the PMR File may be processed through a remote terminal using the format of appendix B-147 or in punched card form in Data Systems using DIC ZBO, appendix B-61.

(2) Four types of PMR Inquiries can be processed as follows:

(a) Remote Inquiry by NIIN. Enter on the keyboard in the format of appendix B-147. Response will be printed immediately at the terminal and will include all PMR documents recorded for NIIN being requested.

(b) Remote Inquiry by NIIN and PIIN/Document Number. Enter on the keyboard of a remote terminal in the format of appendix B-147. Response will be printed immediately at the terminal and will provide the PMR record matching the NIIN and PIIN/Document Number entered in the inquiry.

(c) Card Inquiry by NSN. Prepare coding sheet/keypunch card in format of appendix B-61 (DIC ZBO, Action Code FP) and forward to Data System for processing. Response will be provided the following day in the format of appendix F-1. Each PMR record matching the NSN of the input will be provided.

(d) Card Inquiry by NSN/Document Number or PIIN. Prepare coding sheet/keypunch card in the format of appendix B-61 (DIC ZBO, Action Code FN) and forward to Data System for processing. Response will be provided the following day in the format of appendix F-1. Only the PMR records matching the NSN and PIIN or Document Number of the inquiry will be provided. SPIIN is an optional key when using Action Code FN. If entered response will be defined by PIIN, NSN and SPIIN. If blank, response will be by PIIN and NSN.

(e) Acceptance Alert (A/A) information will be furnished for all DIC ZBO Inquiries containing a valid Procurement Item Instrument Number (PIIN), NSN, Action Code FN, and an A/A report indicator (pos. 76). Acceptance Alert data will appear on the F-204 report.

(3) Responses to remote PMRR Inquiries, Type P, will consist of at least two lines of information. The first line will contain the PMR header data. The second line and any subsequent lines will contain data from the PMR detail records.

(a) Header data will be printed immediately after the inquiry and input:

NSN
UI

(b) Detail data will be printed on the following line (one line for each detail record on an NIIN Inquiry, one line for each record matching the input on the NIIN and PIIN/Document Number Inquiry). Data will include:

DIC
RIC (To)
Type Pack
PIIN or Document Number
Supplemental PIIN
Estimated Delivery
CLIN or Supplementary Address
DICOMSS Cycle Code
Distribution Code
Project Code
Ownership/Purpose Code
Condition Code
Management Code
Receipt In-Process Flag
Quantity

(4) Remote Inquiry responses will be printed on plain continuous form paper.

b. Completed Receipt File (CRF) Inquiries.

(1) Inquiries to the Completed Receipt File can be processed in Data Systems using a punched card or VIA remote terminal keyboard, Type E Inquiry; reference appendix B-69.

(2) Various types of CRF Inquiries can be processed as follows:

(a) Card Input. Prepare coding sheet/keypunch card according to the format specified by appendix B-61 using DIC ZB1 and the appropriate Action Code below.

Action Code FP - NSN Inquiry
Action Code FM - PIIN/DOC NO Inquiry
Action Code FN - NSN and PIIN/DOC NO Inquiry

The response will be provided the following day in the format of appendix F-29. All completed records matching the NSN and/or PIIN/DOC NO will be printed. The inquiry can be further defined by SPIIN. Enter Action Code FN, the SPIIN in pos. 4-7 of the ZB1. Output will be by NSN, PIIN and SPIIN. Use of SPIIN is optional.

(b) Remote Terminal Keyboard Input. Type E Inquiry by NIIN and/or PIIN/DOC NO may by input IAW appendix B-69. Immediate response will be displayed on the CRT in the format outlined in appendix F-205, Receipt Activity Response. All records matching the NIIN and/or PIIN/DOC NO will be displayed. The display may be printed at the terminal by request.

(c) Complete Receipt Inquiries (DIC ZB1) by PIIN and NSN containing an A/R report indicator, pos. 76 will also generate, if available, A/R data via appendix F-204, Acceptance Action/Inquiry Report. This report will reflect total A/R data matching the PIIN present in the inquiry.

(3) No limits exists to the number or type of Completed Receipt inquiry that may be input. However, it is stressed that all remote (real time) inquiries, whether for Contract or Completed Receipt Data, should contain as much specific information as possible. Adherence to this will ensure rapid and responsive answers at all remote terminals.

c. Contract Data Inquiries. Inquiry by PIIN/Document Number and NIIN, as well as Supplemental PIIN and Contract Line Item Number (CLIN), may also be input via remote keyboard CRT terminal IAW appendix B-68, Type C Inquiry. Detailed response will be displayed on CRT in the format outlined in appendix F-205. Hard copy may be selectively printed as required.

d. Violation of card inquiries will appear on the appendix F-85, Violation Printout. Each error will be identified by a VRC and the erroneous data elements will be identified immediately by the printing of an appropiate VRC at the remote terminal. When inquiry results in not matching a record on the file under inquiry, it is considered to have obtained a valid response (NO RECORD)

and is not treated as a violation. NO RECORD response to receipt history inquiries may be due to the age of the original record. In general, completed receipt records are maintained as follows:

(1) Remove/purge all automated contract receipt data 90 days after completion of the contract (all lines).

(2) Remove/purge all other completed Receipt History, Returns, Redistribution and nonautomated Contract Receipts 90 days after MRC date.

(3) Violation correction procedures appear in appendix E-061 V.

e. Violations of remote keyboard input will be displayed immediately following the data input. The specific violation will be identified by the word "ERROR" appearing opposite the data header display or by an in-the-clear message:

(1) PIIN/NIIN requested is not available - PIIN/NIIN NOT AVAIL.

(2) No matching record available - NO MATCH.

f. The F-205 Contract/Activity Data Response, Part I or II will not display records in NSN or CLIN sequence. Contract Data or Complete Receipt information will be displayed as extracted from the Contract Data Record.

5. DATA ENTRY INSTRUCTIONS

a. Inquiries may be keyed into remote terminal (appendix B-068, B-069 or B-147 or processed in card form in Data Systems (appendix B-61). Prior to entry of either remote input through keyboard terminal device, it is necessary to initialize the terminal IAW appendix E-194 P. Acceptance Alert or Acceptance Report data is not accessible via the remote PMR, Type P or the Completed Receipt, Type E Inquiry methods.

b. A/A or A/R data will not be output if the A/A or A/R flag, pos. 76, is blank, IAW appendix B-061 P.

c. Contract Data Inquiries.

(1) Contract Data is available by remote keyboard input only - card/batch inquiry is not available. These inquiries may be prepared and processed IAW appendix B-068, Type C, Contract Data Inquiry.

(2) Three types of Contract Data Inquiries are offered: PIIN only, PIIN/NIIN, or PIIN/CLIN.

(a) PIIN Inquiries will display all NSNs and associated CLINs together with other data as outlined in appendix F-205. Total display of Contract Data may require multiple CRT displays or screen outputs; therefore, messages will be displayed in conjunction with the Contract Data. They will offer guidance to the operator to request additional display information; reference appendix F-205, paragraph 5c(1) through (3).

NOTE: Contract Data Inquiries containing only PIIN data should be limited. Whenever possible, inquiry requests should include NIIN or CLIN (or both) entries; thereby reducing the response time. Adherence to this will improve overall receipt teleprocessing response time.

(b) PIIN/NIIN or PIIN/CLIN Inquiries will limit the contract display to reflect only specific information related to a single NSN or line within the procurement instrument.

(c) Hard copy of Contract Data displays are available at any remote equipped with the printing mechanism. If the original Contract Data Sheet was in error, this new inquiry should be included as part of the receipt document package to be forwarded to the Receipt Confirmation Clerk. The old CDS should be destroyed.

best copy available

APPENDIX E-061 V

GENERAL PURPOSE RECEIPT INQUIRY VIOLATIONS

1. INPUT DOCUMENTS

a. Appendix B-61, General Purpose Receipt Inquiry

b. Appendix B-68, Contract Data, Type C Inquiry

c. Appendix B-69, Completed Receipt, Type E Inquiry

d. Appendix B-147, Type P Remote PMR File Inquiry

2. INPUT TO PROCEDURE DECISION CHARTS

a. Appendix D-46, PMR File Inquiry

b. Appendix D-47, Completed Receipt File Inquiry

3. PURPOSE CONTENTS AND RESPONSIBILITIES

a. This procedure provides instructions to any organizational element for research, correction, and reentry of PMR Completed Receipt Contract Data inquiries which have been rejected from computer processing. This procedure applies to inquiries processed through a remote terminal or in card form in Data Systems.

b. Violation of remote inputs will be identified by the printing of an error notice or an in-the-clear message at the remote terminal from which the inquiry was entered. Violation of card inputs in data out (appendix F-85) with the errors identified by appropriate VRCs In both cases, erroneous data elements will be underlined with asterisks.

c. When an inquiry input results in a no match condition, it is considered to have obtained a valid inquiry response (NO RECORD) and is not treated as a violation. Therefore, only content violations can occur on a PMR Completed Receipt inquiry or Contract Data (CD) inquiry. These violations are identified by validating the input data alone without reference to the file.

d. VRCs and definitions which apply are as follows:

VRC	DEFINITION
AI	PIIN or document number invalid.
AY	NSN or NIIN invalid.
CF	Action Code invalid.

VRC	DEFINITION
EX	SPIIN invalid.
JI	CLIN invalid.

a. VIOLATION REASON CODE AI (Card) or PIIN/Document Number Error (Remote CRT).

(1) PROCESSING/RESEARCH REQUIRED

The PIIN/Document Number in the Type C Inquiry is blank, or the PIIN/Document Number entered in the input is other than alpha/numeric or Action Code of card input is FM, or FN, or PIIN, or Document Number, is other than alpha/numeric.

(2) PROCESSING/RESEARCH REQUIRED

Determine the correct PIIN or Document Number by reference to the source document and reenter.

b. VIOLATION REASON CODE AY (Card) or NIIN Error (Remote CRT).

(1) REASON FOR VIOLATION/ERROR CONDITION

The NIIN entered in the remote inquiry (appendix B-147, B-68 or B-69) is other than all numeric greater than zero (third position may be alpha A, B, J, L or S) or Action Code of card input (appendix B-61) is FP or FN and NSN is other than all numeric (seventh position may be alpha A, B, J, L or S).

(2) PROCESSING/RESEARCH REQUIRED

Determine the correct NIIN or NSN by reference to the source document and reenter card or correct display (CRT) and depress ENTER key.

c. VIOLATION REASON CODE CF (Card) or Invalid Inquiry (Remote CRT).

(1) REASON FOR VIOLATION/ERROR CONDITION

DIC of input is ZBO and Action Code is FM.

(2) PROCESSING/RESEARCH REQUIRED

Determine the correct Action Code (FN or FP) by reference to the source document, assure all required data are entered for the Action Code to be used, and reenter.

d. VIOLATION REASON CODE EX (Card) SPIIN ERROR (Remote CRT).

(1) REASON FOR VIOLATION/ERROR CONDITION

For card or remote CRT, supplementary PIIN contains other than alphanumeric entry (embedded blank special characters not valid). SPIIN was blank when position 9 of PIIN entry contained A or D for remote CRT only.

(2) PROCESSING/RESEARCH REQUIRED

Determine correct SPIIN or enter missing data and reenter card or correct CRT display error and depress ENTER key.

e. VIOLATION REASON CODE JI (Card) or CLIN ERROR (Remote CRT).

(1) Reason for violation/error condition other than numeric in any of first four CLIN positions, or other than alpha/numeric in last two positions - zero fill is not valid.

(2) Determine correct CLIN and enter missing card data and reenter or correct display (CRT) and depress ENTER key.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, reenter the punched card IAW appendix E-061 F.

b. Remote keyboard errors will be clearly displayed. The word "ERROR" will appear opposite the data entry violated. The cursor will be positioned automatically at the first error point for data reentry. Further errors will require manual action to position the display cursor. To reenter corrected data, depress ENTER key. Reference appendix E-194 P for further details.

c. NO RECORD responses indicate, if the inquiry is valid, that the PMR, Completed receipt or contract data has been deleted, completed, or purged due to age or other criteria. Retired or deleted Automated Contract Data may be further researched by review of the F-203, Contract Audit Report.

APPENDIX E-062 P

LOCATION SURVEY MANAGEMENT ACTIONS

1. PURPOSE

To provide DS/T with information as to warehousing deficiencies identified during the accomplishment of Location Surveys.

2. APPENDICES USED IN THIS PROCEDURE

Appendix F-151.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. Office of the Director, DS/T.

b. Area Control Branches, Warehousing Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. ODS will prepare the report in the format outlined in appendix F-151 (in duplicate) and forward part I to Inventory Control Office, and part II to the Director, DS/T.

b. Inventory Control Office will maintain suspense on part I of the report to ensure completed actions by Area Control Branches.

c. Area Control Branches will take immediate action to correct deficiencies identified on the report and return completed copy with actions indicated to Inventory Control Office.

d. Director, DS/T, will utilize part II of the report to identify warehouse areas where problems exist and to spot check to ensure necessary actions are being accomplished.

APPENDIX E-063 P

REPLY TO AN MRO/DRO FOLLOWUP (DIC AF6/AFJ)

1. FORM/REPORT USED

a. Appendix F-50 Report.

b. Manual MRO/DRO Control File.

2. REASON/CRITERIA FOR PREPARATION

An MRO/DRO Followup transaction (DIC AF6/AFJ) has been received for an MRO/DRO coded DP (manual processing) in the MRO/DRO History File. The transaction has been placed on the F-50 report for manual processing. Based on data in the manual MRO/DRO Control File, a quantity or portion of the followup request quantity is to be reported to the DSC/ICP as:

a. Shipped and a manually prepared MRO confirmation reply (appropriate DIC AR_) is required.

b. Being in-process/offered to Transportation and a manually prepared status reply (DIC AE6 or AEJ with Code BA in pos. 65-66) is required.

c. Being in a hold status at Transportation and a manually prepared MRO confirmation reply (appropriate DIC AR_ with appropriate Hold Code in pos. 51, ESD in pos. 57-59, and pos. 62-80 blank) is required.

d. No record exists for this followup quantity or portion of the followup quantity. A manually prepared No Record reply (DIC AE6 or AEJ with Code BF in pos. 65-66) is required.

e. The MRO was lost. There is a record of MRO but no supporting record of action taken. A manually prepared Force Close reply (DIC AE6 with Code BE in pos. 65-66) is required. (Status Code BE is invalid for AEJ.)

f. Being previously denied. A manually prepared previous denial reply (DIC AE6 or AEJ with Code BY in pos. 65-66; Purpose Code pos. 70; Condition Code pos. 71; Management Code pos. 72; and quantity denied in pos. 25-28) is required.

g. Being rejected when containing Advice Code 2T and RDD cannot be met. A manually prepared rejected reply (DIC AE6 with Code CB in pos. 65-66) is required.

h. Being canceled when undelivered FMS documented materiel was returned to stock. A manually prepared status reply (DIC AE6 with Code BY in pos. 65-66 and Code C in pos. 72) is required.

i. Being previously canceled. A manually prepared cancellation reply (DIC AG6 or AGJ with Code BQ in pos. 65-66) is required.

j. Offered to Transportation and an NOA was forwarded to the country representative or freight forwarder. The date offered to transportation will be construed/interpreted as the date NOA was forwarded. A manually prepared status reply (DIC AE6 with date NOA was forwarded in pos. 62-64, Code BL in pos. 65-66, and pos. 70-73 blank) is required.

k. Attempting diversion of the shipment quantity. A manually prepared cancellation reply (DIC AG6 or AGJ with Code B9 in pos. 65-66) is required.

l. The shipment quantity has been diverted to alternate consignee. A manually prepared cancellation reply (DIC AG6 or AGJ with Code B6 in pos. 65-66) is required.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Shipping Documentation Branch.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Sources of Information.

(1) F-50 Report.

(2) Manual MRO/DRO Control File.

b. Time Standards for Distribution of Status.

Shipment status in response to followups, will be dispatched within the times prescribed below:

(1) Twenty-four hours from receipt of PD 01-03 followups.

(2) Forty-eight hours from receipt of PD 04-08 followups.

(3) Three working days from receipt of PD 09-15 followups.

c. Preparation of Form/Report.

Prepare a local coding data sheet utilizing the information outlined in subparagraph a above. Replies will be in one of the following formats:

(1) Appendix B-14, Materiel Release Order Confirmation Card (DIC AR_).

(2) Appendix B-94, Supply Status Card (DIC AE6).

(3) Appendix B-81, MRO/DRO Cancellation Request Answer Card (DIC AG6, AGJ).

(4) Appendix B-225, Disposal Release Confirmation/Status Card.

d. Distribution of Form/Report.

Forward completed local coding data sheet to ODS, via keypunch services/ optical scanner services for input to AUTODIN.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE TO RETURNED FORM/REPORT

Keypunch service optical/scanner services will return the local coding data sheet to the office of the initiator after keypunch action has been completed appropriate input card forwarded to AUTODIN.

6. DISPOSITION OF FORM/REPORT AFTER FINAL ACTION

Update manual MRO/DRO Control File and F-50 report with action taken, destroy local coding sheets.

APPENDIX E-064 P

MRO INVENTORY TRANSACTION (DUPLICATE DD FORM 1348-1)

1. FORM USED

MRO Inventory Transaction, Duplicate DD Form 1348-1.

2. CRITERIA FOR PREPARATION

This partially printed DD Form 1348-1 will be computer prepared for each MRO released when the item is flagged in the locator as "Inventory In-Process."

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Shipment Documentation Branch, Shipping Division, Directorate of Storage and Transportation (DS/T).

b. Warehousing Division, DS/T.

c. Inventory Office, Operations Control Office, DS/T.

4. DISTRIBUTION OF CARDS

a. Inventory Transaction, DD Form 1348-1, is received by Shipment Document Control Branch from the Data Processing Element.

b. Shipment Document Control Branch matches duplicate DD Form 1348-1 with applicable MRO and expedites flimsies to Warehousing Division. A partially printed DD Form 1348-1, Inventory Transaction, will be sequenced directly behind the MRO.

5. PROCEDURE FOR PROCESSING ZUE FLIMSY

a. Warehousing Division.

(1) Stock selector will receive DD Form 1348-1 flimsies and the Inventory Transaction, duplicate copy of DD Form 1348-1.

(2) When materiel for the MRO is removed from location or is placarded in location for subsequent pickup, the stock selector will circle the color tape on the duplicate DD Form 1348-1 corresponding to the color tape affixed to the left edge of the stack label, and annotate his name and the Julian date in the space provided. If the quantity selected is not the same as requested, actual quantity selected will be annotated on the duplicate DD Form 1348-1. Stock selector will forward one copy of the duplicate DD Form 1348-1 to area control branch. This copy will be retained for a minimum of 15 days. Depots have the option to retain these documents for a longer period if so desired.

(3) If the flimsy has the notation "Before Inventory" printed in block FF and no duplicate DD Form 1348-1 is provided, stock selector will annotate the following information on a blank card or paper:

NSN
Document Number of MRO and Suffix
Quantity Selected
Inventory Control Number from Block X of Flimsy
Julian date

Forward dummy card or paper to Area Control Branch.

b. Central Inventory Control point will use duplicate DD Form 1348-1 or manually prepare notices as source documents to prepare updates to the IDC File IAW appendix E-055 P.

APPENDIX E-065 P

PROJECT ORDERS FOR REPAIR

1. PURPOSE

This procedure describes the method of preparing project orders and submitting to distribution activities by the accountable DSC, on materiel classified as conditions F and G.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix C-5.

b. Appendix C-36.

c. Appendix C-65.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Management Support Office, Directorate of Storage and Transportation and Office of the Comptroller.

4. PROCEDURES/INSTRUCTIONS

a. The Project Order (DLA Form 531), in original and one copy, is submitted to the Directorate of Storage and Transportation by the accountable DSC. DLA Form 531 (appendix C-65) is prepared by the accountable DSC based upon review of DD Form 1225 (appendix C-5) or SF 364 (appendix C-36) which were submitted by defense depots in accordance with instructions contained in chapters 3 and 5 of this volume.

b. The Directorate of Storage and Transportation will review DLA Form 531 in conjunction with the applicable DD Form 1225 or SF 364 to determine whether or not work can be performed.

c. If project can be accomplished, the Directorate of Storage and Transportation will complete item number 12 of DLA Form 531 to indicate acceptance; return one copy to the accountable DSC; and retain original copy for reference.

d. Return both copies of DLA Form 531 in the event project cannot be accepted.

e. Original DLA Form 531, along with applicable DD Form 1225 or SF 364 for accepted projects, is filed in suspense pending completion of work.

f. Office of the Comptroller will establish fund control.

5. DISPOSITION OF FORM AFTER FINAL ACTION

Original copy of DLA Form 531 with report of cost incurred will be forwarded to the Office of the Comptroller.

APPENDIX E-066 P

ADVANCED CANCELLATION NOTICE INQUIRY

1. PURPOSE

Provides the capability to inquire the Advanced Cancellation Notice File.

2. APPENDICES USED IN THIS PROCEDURE

D-43

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

DS/T

4. PROCEDURES/INSTRUCTIONS

a. General

(1) This file contains data relative to all AC6, AC7 and ACJ cancellation requests received on inprocess MROs/DROs regardless of the extended dollar value of the MRO/DRO. The file is updated in conjunction with each ENTRY cycle thereby remaining in a current status. Records are only retained on the file during the day the cancellation request is received, unless the request is received after 1500 hrs, then the record is retained on file during the next day.

(2) The file contains data for MOFAST, Non-MOFAST and SEAVAN MROs/DROs.

b. CRT Initialization

(1) Key in $$UWSZ15

(2) Press ENTER key. This entry will dedicate the CRT to the cancellation notice inquiry with the display identified in figure 1.

(3) The data displayed represents pertinent data relative to the first two MROs on the file. To continue viewing additional MROs press the ENTER key.

c. Inquire by Warehouse Area

(1) To obtain an inquiry of all MROs within a warehouse area enter the first 3 positions of the warehouse area (i.e., T11) to the right of the heading WHSE on the first line of the present display.

(2) Press ENTER Key.

(3) If data is available on the file for the requested warehouse area the CRT will respond with MRO data. Press ENTER key to continue reviewing records.

NOTE: This option can also be utilized to obtain an inquiry of all NO LOC MROs on the file. Enter /NL in the WHSE input field.

d. Inquire by Sequence Number

(1) This inquiry option will allow the operator to access any record on the file without having to page through all the records that precede it. This option can be utilized by itself or in conjunction with the warehouse option.

(2) Enter the display number of the desired record in the sequence number field. Press the ENTER key. If data is available for the requested sequence number the CRT will respond with the pertinent data. Press the ENTER key to continue reviewing records.

e. Final Display or No Data Available

(1) When all of the available records on file for any of the above inquiry options has been displayed, the following message will appear on the bottom of the final display:

ALL RECORDS DISPLAYED

(2) When no data is on file for the requested inquiry option the CRT will respond with a blank screen and the above message.

f. Data Field Definitions. The following are definitions of abbreviations used in the display:

*WHSE	-	First three positions of warehouse area code
*SEQ NO	-	Record Sequence Number
SU NO	-	Shipment Unit Number
LINE	-	Line Item Number
SFX	-	Line Item Suffix
LINES IN SU	-	Total Line Items comprising the shipment unit
DOCUMENT NO	-	Document Number
SFX	-	Document Number Suffix Code
NSN	-	National Stock Number
**QTY ORDRD	-	Quantity Ordered
QTY CANCEL	-	Quantity Previously Canceled
**QTY TO BE CANCEL	-	Quantity to Be Canceled
AC DATE REC	-	Julian Date Cancellation Notice was Received
MESSAGE AREA	-	Appears to right of AC DATE REC field as follows: Blank - MOFAST Document NON MOFAST - Non-MOFAST Document SEAVAN - SEAVAN Document NEW DOC - No inprocess record, cannot cancel until tomorrow
DISPLAY NR	-	Display Number within total file or within warehouse area
WEIGHT	-	Line Item Weight
CUBE	-	Line Item Cube
**EXT PRICE	-	Extended Line Item Cost

PRIME WHS LOCATION	-	Prime Warehouse Location or message NO LOC
MD	-	Mode
ST	-	Status
POE	-	Port of Embarkation
PG	-	Issue Priority Group
DESTINATION ADDRESS	-	Last Line of TAC 1 or 2 Address or message NO ADDRESS AVAILABLE

*Updatable fields based on the inquiry option being utilized.

**If the MRO relative to the Cancellation Notice has been partialed, these data elements represent a prorated portion of the total cancellation values.

APPENDIX E-067 P

INVENTORY WORKLOAD BANK TRANSACTION

1. PURPOSE

This procedure contains instructions for establishing NSNs into the Inventory Workload Bank (IWB).

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-26.

b. Appendix B-67.

c. Appendix C-21.

d. Appendix D-7.

e. Appendix F-8.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office, D/D.

4. PROCEDURES/INSTRUCTIONS

a. Workload by NSN is established in the IWB from one of the following sources:

(1) Input of local request card, appendix B-67.

(2) Input of requests from DSCs, appendix B-26.

(3) Mismatches as a result of Locator Reconciliation Program. Internal computer actions.

b. After an inventory cutoff date has been initiated, the NSNs will remain in the IWB until 5 days before the cutoff date. NSNs will automatically be deleted from the IWB 90 days after established if no action has been taken to input an inventory cutoff date within that time. NSNs previously established may be deleted from the IWB by input of DIC ZAX (appendix B-90) using Action Code WY. All NSNs deleted from the IWB will appear on the F-117 listing. Requested dates are established by the DSC for DSC requested counts. Based on the annual Inventory Schedule and Locator Inventory Analysis Report (appendix F-8), the Inventory Office will prepare local input, appendix B-67, to ensure a steady workload in the IWB.

c. Workload may be established in the IWB in a number of ways:

(1) By single NSN.

(2) By FSC.

(3) A range of NSNs.

(4) By Commodity Manager.

(5) By Inventory Category Code.

(6) By Priority (DSC Input).

d. Results of input to the IWB will be reflected on the forecast of IWB Data, appendix F-16.

e. Stock numbers will not be established on the IWB which have been previously inventoried during the current fiscal year, unless the Bypass Code WW is entered in pos. 79-80 of the input DIC ZAV.

APPENDIX E-068 P

DEPOT BALANCE/TRANSACTION REGISTER (DB&TR) MATERIEL ADJUSTMENT DOCUMENT

1. PURPOSE

This procedure describes the processing of the DB&TR Materiel Adjustment Document, appendix B-62, DIC ZAD. The DIC ZAD is used to make the following changes to the depot transaction file (appendix F-145):

a. Add record to the transaction file.

b. Delete records from the transaction file.

c. Change/correct a record on the transaction file.

DIC ZAD will update the DB&TR for any DIC in the DB&TR and will take the same action as the original DIC.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix F-145, Depot Balance and Transaction File Printout.

b. Appendix F-146, Monthly Reconciliation Unmatched Balance/Transactions.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

After evaluation of the F-145 and/or F-146 listings, appendix B-62 will be prepared to make changes to the DB&TR transaction file as follows:

a. When a transaction has failed to process either at the depot or to the DB&TR, a DIC ZAD will be input with the original transaction in the original DIC field. This will add the transaction to the transaction file.

b. When the DB&TR transaction file reveals that a transaction is either duplicated or otherwise has been inadvertently added a DIC ZAD will be prepared using an X overpunch in pos. 32. This action will reverse out the transaction.

c. When the DB&TR transaction file indicates a transaction which has incorrect information, a DIC ZAD to reverse out the incorrect transaction will be processed. A second DIC ZAD will be input with corrected data. The corrected transaction will not be part of the transaction file.

NOTE: Extreme caution will be exercised in the use of the ZAD. Keep in mind that the depot balance file will reflect the quantity and other header record data resulting from input of the ZAD.

APPENDIX E-070 P

INVENTORY CANCELLATION CARD

1. PURPOSE

This procedure describes the method for canceling Inventories once they have been released from the Inventory Workload Bank (IWB). Reference appendix E-170 P for deleting items from the IWB.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-70, Inventory Cancellation Card.

b. Appendix D-6, Procedure Decision Chart for appendix B-70.

c. Appendix F-85, Violation Printout.

d. Appendix F-117, Inventory Cancellation listing.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Inventory Office.

4. PROCEDURES/INSTRUCTIONS

a. Cancellation of a specific NSN will require Inventory Office personnel to prepare and process a Physical Inventory Cancellation Card, entering DIC ZAS, stock number of item being canceled, as outlined in appendix B-70.

b. When it is desired to cancel an inventory on a specific supply class, the FSC will be entered in pos. 8-11 of appendix B-70.

c. The reason for cancellation may be entered in pos. 22 of appendix B-70. Inventory Management Codes are listed in appendix A-13, paragraph 10. Management Code E must be entered to extend an inventory beyond the automatic cancellation date (15 days after cutoff date).

d. Cutoff date cannot be amended. If cutoff date is to be changed, the inventory must be canceled and rescheduled through the Inventory Workload Bank.

e. The accountable DSC will be furnished a listing of all inventories canceled by the depot as described in this appendix. This listing should be furnished on a daily basis as cancellations occur and should indicate the intent of the depot to reschedule the inventory, if appropriate.

NOTE: Input is restricted to 15 entries per day.

APPENDIX E-071 P

ITEM LOCATOR SUBRECORD ADDITION, DELETION AND CHANGE CARD

1. FORM USED

Appendices B-71 and C-71, Item Locator Subrecord Addition, Deletion, and Change Card (DLA Form 536)

2. REASON/CRITERIA FOR PREPARATION

a. The Stock Locator Change Document is utilized to establish, delete, or change data elements of the subrecord (location) of the Item Locator Record or to establish additional data in the subrecord.

b. Data elements are changed in the Item Locator Subrecord by inserting new information in applicable fields of the DLA Form 536. Entries left blank will not be changed.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The following organizations within the DS/T are responsible for the maintenance of the Item Locator Subrecord.

a. Management Support Office.

(1) MOWASP Data Control Branch.

(2) Review of the Locator Subrecord File utilizing the Item Locator Record Report (appendix F-51) and Locator Transaction Report (appendix F-52).

b. Receiving Division.

(1) Receipt Documentation Branch.

(2) Operations Branch.

(3) Processing of Item Locator Subrecord Add (appendix C-63) in conjunction with receipts.

c. Warehousing Division.

(1) Area Control Branch.

(2) Bin Operations Branch.

(3) Stock Readiness Branch.

(4) Preparation of Item Locator Subrecord to add, delete, and change elements of data.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Source of Information.

The DLA Form 536 is prepared from data available from container markings and Storage Location Identification Label (appendix C-104).

b. Preparation of Form.

Prepare the DLA Form 536 IAW appendix B-71.

c. Signature Requirements.

The signature block will be completed by originating warehouseman, and the date of preparation will be placed in the date block.

d. Distribution of The Form.

DLA Form 536 may be forwarded through the MOWASP Data Control Branch of the MSO for review prior to keypunching/optical scanner processing and forwarding to the ODS.

5. DISPOSITION OF FORMS

DLA Form 536 will be retained by the MOWASP Data Control Branch or FRC for a period of 24 hours after processing action to ODS for resolving violation and followup.

APPENDIX E-071 V

ITEM LOCATOR SUBRECORD ADDITION, DELETION, CHANGE AND SUSPENDED RECEIPT INPUT CARD VIOLATIONS

1. INPUT DOCUMENT

Item Locator Subrecord Addition, Deletion, Change and Suspended Receipt Input Card, Document Identifier Code ZBA, appendix B-71 (and DIC 9BA which is created internally as a result of processing certain other DICs) and appendix C-71.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-15.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Item Locator Subrecord Addition, Deletion, Change and Suspended Receipt Input Cards which have been rejected from computer processing. The MOWASP Data Control Branch and/or the organizational element designated by the Functional Routing Code on the Violation Printout (appendix F-85) is responsible for making necessary corrections to the rejected document. Violation Reason Codes and reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Condition Code invalid or blank.
AP	Warehouse Location Code invalid.
AY	National Stock Number invalid.
B9	Cross-Reference NSN on file.
CF	Action Code invalid.
CK	Type of Pack Code invalid.
D6	Lot/Contract Indicator invalid.
F6	Duplicate NIIN.
HG	Type of Storage Code invalid.
HH	Date of Pack/Expiration invalid.
	NOTE: Date of Pack is applicable to nonsnelf-life items and Expiration Date is applicable to shelf-life items.

VIOLATION REASON CODE	DEFINITION
HU	Unit Pack invalid or blank.
HV	Type of Location Code invalid.
HW	Inspection date invalid.
LP	NSN and location do not match existing record.
PU	Input does not match record.
SO	Location is other than alpha O in MMHS.
YE	Input data does not match location record.
30	Maximum number (30) of subrecords exist in locator file for commissary NSN.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AF.

(1) Condition Code, pos. 71 other than that authorized in appendix A-16.

(2) If entry was correct, contact warehouse storing materiel through location indicated in pos. 32-43 of input document and ascertain correct condition from container markings.

b. VIOLATION REASON CODE AP.

(1) Warehousing Location Code, pos. 32-43, has an invalid configuration, not authorized by appendix A-59.

(2) If entry was correct, contact warehouse storing materiel through location indicated in pos. 32-43. If identification is not possible in this manner, refer problem to organizational element indicated by FRC (pos. 77-78).

c. VIOLATION REASON CODE AY.

(1) National Stock Number, pos. 8-21, contains blanks or alphas, except pos. 12, may be alpha A, B, J, L, S, if DICOMSS depot.

(2) Research Suspense Files of DLA Form 536 for entry error.

(3) If entry was correct, contact warehouse storing materiel through location (pos. 32-43) on input document.

d. VIOLATION REASON CODE B9.

(1) There is a cross-reference for the NSN, pos. 8-20. The NSN has been changed.

(2) Research the Storage Item Change Listing, appendix F-82, for the new NSN.

(3) If the necessary information is not available from appendix F-82, contact the warehouse storing the materiel through location indicated in pos. 32-43.

e. VIOLATION REASON CODE CF.

(1) Action Code, pos. 79-80 is not authorized by appendix A-42 and appendix B-71.

(2) Research Suspense Files of DLA Form 536 for entry error.

(3) If entry was correct, refer to appendix A-42 for proper Action Code.

f. VIOLATION REASON CODE CK.

(1) Type of Pack Code, pos. 19 is other than 1, 2, 4, or blank.

(2) Research Suspense Files of DLA Form 536 or RCD-1 for entry error.

(3) If entry was correct, refer to appendix A-4 for proper Type Pack.

(4) If necessary, contact warehouse through location (pos. 32-43).

g. VIOLATION REASON CODE D6.

(1) Lot/Contract Indicator, pos. 58 is other than C, L, R, numeric or blank.

(2) Research Suspense Files of DLA Form 536 or SAD-2 for entry error.

(3) If entry was correct, contact the warehouse through location, pos. 32-43.

h. VIOLATION REASON CODE F6.

(1) The input NIIN is a duplicate of a NIIN already in the record because the FSC of the input NIIN is different from the FSC in the record.

(2) Research the Suspense Files of DLA Form 536 or RCD-1 for entry error.

(3) If entry was correct, contact the warehouse through location, pos. 32-43, for correct data.

i. VIOLATION REASON CODE HG.

(1) Type of Storage Code, pos. 29-31, is not authorized by appendix A-45.

(2) Research Suspense Files of DLA Form 536 or SAD-2 for entry error.

(3) If entry was correct, contact warehouse storing materiel through location (pos. 32-43) on input document for correct Type Storage Code.

j. VIOLATION REASON CODE HH.

(1) If the Shelf-Life is alpha/numeric other than O, X or blank and Condition Code other than J, K, L, or H, the date of pack/expiration (pos. 49-52) month must be greater than 0 and less than 13. The date cannot be greater than 66 months from the current month. An additional 6 months is provided on the maximum shelf-life period to accommodate items that are age controlled by quarters of the year (reference MIL STD 1523).

(2) Research Suspense Files of DLA Form 536 or SAD-2 for entry error.

(3) If entry was correct, contact inspector to ascertain correct Date of Pack/Expiration.

k. VIOLATION REASON CODE HU.

(1) Unit Pack, pos. 63-67, is other than numeric or blank.

(2) Research Suspense Files of DLA Form 536 and SAD-2 for entry error.

(3) If entry was correct, contact warehouse storing material through location (pos. 32-43) on input document and ascertain correct Unit Pack from container markings.

l. VIOLATION REASON CODE HV.

(1) Type of Location Code, pos. 23, is other than A, K, or blank, not authorized by appendix A-58.

(2) Research Suspense File of DLA Form 536 for entry error.

(3) If entry was correct, refer to appendix A-58 for proper code.

m. VIOLATION REASON CODE HW.

(1) Inspection Date, pos. 45-48, is other than numeric two-digit month and two-digit year or other than all blank. (Field positions 45-48 may not be all blank when Shelf-Life Code is in locator record.)

(2) Research Suspense Files of DLA Form 536 or SAD-2 for entry error.

(3) If entry was correct, contact warehouse through location (pos. 34-43) on input document for correct date code.

n. VIOLATION REASON CODE LP.

(1) An attempt made to change or delete data, or delete a location, and no matching record found in computer locator files.

(2) Research suspense files of DLA Form 536 for entry error.

(3) If entry was correct, contact warehouse through location (pos. 32-43) for correct data.

(4) If data submitted is correct, submit Location Inquiry Card (refer to appendix B-79, Action Code FF) for all locations of NSN in question -- answered by Locator Subrecord Printout (F-36).

(5) If input action was to delete a location and no matching record exists on F-36, discontinue processing, destroy input document, and cancel action on Violation Printout (F-85).

o. VIOLATION REASON CODE PU.

(1) Input data does not match erroneous ZBA record in Suspense File.

(2) Research Unmatched MRC/ZBA Listing, F-201, F-202, or F-203, transportation or entry error.

p. VIOLATION REASON CODE SO.

(1) This code indicates the location is in the mechanized materiel handling system at DDMP only, but the first position of the Location Code is other than alpha O.

(2) Research and determine whether or not materiel was stored in MMHS, DDMP only. If so, reenter with alpha O in first position of location.

q. VIOLATION REASON CODE YE.

(1) An attempt was made to add data which differs from data already in the record.

(2) Research Suspense Files of DLA Form 536, RCD-1 or SAD-2 for entry error.

(3) If input document was correct, refer to organizational element indicated by FRC to review this location and move materiel to new location since new addition does not match current materiel stored in that location.

r. VIOLATION REASON CODE 30.

(1) This code indicates that the maximum number of locator subrecords (30) already exists for a commissary item, and an "add" transaction has been input.

(2) Action must be taken to combine two or more materiel locations into a single location, delete the vacated locations, and reinput the "add" transaction.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction directly below the erroneous data field on the Violation Printout (F-85) using a ballpoint pen to print legible characters.

b. Reenter corrected in B-71 format via program $$UWME10.

c. If the violated transaction is DIC 9BA, change the DIC to ZBA.

APPENDIX E-072 P

REWAREHOUSING CARD

1. FORM USED

Rewarehousing Card (DLA Form 676) appendices B-72, C-47, C-104, and D-16.

2. REASON/CRITERIA FOR PREPARATION

The Rewarehousing Card is prepared and submitted during rewarehousing operations:

a. Change Location and/or Type of Storage.

b. For receipt of bin labels as required.

c. To identify a Bin replenishment accomplished.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Personnel of Area Control Branch(es) and Bin Operations Branch of the Warehousing Division are responsible for the preparation and timely submission of the Rewarehousing Card.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Source(s) of Information

DLA Form 676 is prepared from information obtained from the Storage Location Identification Label (appendix C-104) and Type of Storage Code (appendix A-45).

b. Preparation of Form

Prepare/Complete DLA Form 676 as follows:

FIELD POSITIONS	INSTRUCTIONS
1-3	ZUN (Preprinted).
8-20	Enter the applicable Stock Number as shown on the Storage Location Identification Label. This field mandatory with Action Code FT.
31-33	Enter Type of Storage Code (appendix A-45) for the actual physical location of the materiel (old). This field not required with Action Code FT.

FIELD POSITIONS	INSTRUCTIONS
34-45	Enter the Location as reflected on the Storage Location Identification Label. If location label only required, use applicable Action Code. This field mandatory with Action Code FT.
48-50	Enter the NEW Type of Storage Code (appendix A-45) if the Type of Storage is changed, or use the OLD Type of Storage Code if no change is required. This field not required with Action Code FT.
51-62	Enter the NEW Location. This field is mandatory with Action Code FT.
63-69	Enter total pounds rewarehoused for this input only. This field not required with Action Code FT.
70-74	Enter unit pack if different than locator. This field not required with Action Code FT.
77-78	Enter the two-digit code for the organizational element preparing the Rewarehousing Card.
79-80	Enter applicable Action Code required on each input, i.e., FU to provide location label only, FV to delete and reserve if MMHS, FY to delete, GD to provide permanent Bin Labels, and FT if a Bin replenishment action took place (moving materiel from the Bulk Location to replenish the Bin Location so stock can be issued).

c. Signature Requirements

The signature block will be completed by the originator of the Rewarehousing Card, to include name and date.

d. Distribution of Form

The completed DLA Form 676 may be forwarded through the MOWASP Data Control branch of the Management Support Office for review prior to input and processing by the Office of Data Systems.

5. DISPOSITION OF FORM

DLA Form 676 will be retained by the MOWASP Data Control Branch or the FRC for a 24-hour period after processing action to Data Systems for resolving violations and followup.

APPENDIX E-072 V

REWAREHOUSING CARD LOCATION AND/OR TYPE OF STORAGE CHANGE VIOLATIONS

1. INPUT DOCUMENT

Rewarehousing Card (DLA Form 676) Location and/or Type of Storage entries, DIC ZUN, appendices B-72, C-47, and C-104.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-16

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of Rewarehousing Card Location and/or Type of Storage changes which have been rejected from computer processing. MOWASP Data Control Branch and/or organization designated by the FRC on the Violation Printout (F-85) are responsible for the correction of errors and reentry of the card as required. Reasons for computer rejections are as follows:

VIOLATION REASON CODE	DEFINITION
AP	Invalid location.
AY	Invalid NSN.
CF	Action Code invalid.
HG	Invalid Type of Storage Code.
EN	Stock number unmatched.
HX	Weight invalid or blank.
LP	No matching location for NSN.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AP indicates that location in pos. 34-45 (old) or pos. 51-62 (new) has been omitted, or is invalid.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Research the suspense file of Rewarehousing Cards for possible errors.

(b) If input was correct, contact the individual per signature block of the input Rewarehousing Card and ascertain the correct location.

b. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AY indicates that NSN in pos. 8-20 is other than all numerics or has been omitted.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Research the Suspense File of Rewarehousing Cards for possible input errors.

(b) If entry was correct, contact the individual per signature block of the input Rewarehousing Card giving the location, to readily obtain the correct NSN.

c. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC CF indicates that Action Code, pos. 79-80, is not authorized by appendices A-42 and B-71.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Research Suspense Files of DLA Form 676 for input error.

(b) If input was correct, refer to appendix A-42 for proper Action Code.

d. VIOLATION REASON CODE EN.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC EN indicates that the stock number, pos. 8-20, is not on the locator file.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Research the Suspense File of rewarehousing cards for possible input errors.

(b) If input was correct, contact the individual per signature block for preparation of an Item Locator Subrecord Card (DLA Form 536), DIC ZBA, and process IAW appendix E-071 P to establish a locator master record and new location on the locator.

e. VIOLATION REASON CODE HG.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HG indicates Type of Storage Code, pos. 48-50, has been omitted.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Research the Suspense File of Rewarehousing Cards for possible input errors.

(b) If input was correct, contact the individual per signature block of the input Rewarehousing Card (DLA Form 676) and ascertain the correct Type of Storage Code.

f. VIOLATION REASON CODE HX.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HX indicates the Pounds Rewarehoused field, pos. 63-69, contains other than numeric entries or contains blanks.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Research the Suspense File of Rewarehousing Cards for possible input errors.

(b) If input was correct, contact the individual per signature block of the input Rewarehousing Card (DLA Form 676) and ascertain the correct data.

g. VIOLATION REASON CODE LP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC LP indicates there is no matching location for pos. 34-45.

(2) PROCESSING/RESEARCH REQUIRED:

(a) The new location (pos. 51-62) is established on the locator with missing and/or incorrect elements because there was no matching old location from which to extract the data. Research must be accomplished to determine what the correct data elements are for the new location. Enter the correct data element through preparation of an Item Locator Subrecord Card (DLA Form 536), DIC ZBA, and process IAW appendix E-071 P.

(b) Research the Suspense File of rewarehousing cards for possible input errors in the old location. If the old location on the card is incorrect, the old location still on the locator must be deleted. Enter the delete action through preparation of an Item Locator Subrecord Card (DLA Form 536), DIC ZBA, IAW appendix E-071 P.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction directly below the erroneous data field on the Violation Printout.

b. Reenter corrected data via program $$UWME10.

APPENDIX E-073 P

ITEM LOCATOR RECORD CARD ADDITIONS, DELETIONS OR CHANGES

1. CARD USED

Basic Item Locator Record Card. DICs ZBC ZBD, and appendix D-17 procedure chart.

2. REASON/CRITERIA FOR PREPARATION

The Basic Item Locator Record Card is prepared and submitted to establish, change, or delete data in the Basic Item Locator Record. DLA Activities can add new freight classification data only when the locator record for those elements are blank, existing freight classification data will not be changed by DLA Activities. This is accomplished by the DSCs. The NSN or FSC cannot be deleted with this input. All other data may be deleted and the NSN will be deleted automatically after 90 days if no PMRC exists. Central Data Bank will maintain record for one year after all users withdraw. (DICOMSS excluded)

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Personnel of the MOWASP Data Control Branch of the Management Support Office are responsible for the preparation and timely submission of the Item Locator Record Card.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF INPUT

a. Source(s) of Information.

The Item Locator Record Card is prepared from the following:

(1) National Motor Freight Classification Guidebook.

(2) DLAM 4500.32R, MILSTAMP.

(3) DLAM 4140.2, Volume III, A Appendices.

b. Preparation of Form.

(1) To establish or change any data element, the Item Locator Record Card will be prepared or completed as follows:

FIELD POSITIONS	INSTRUCTIONS
1-3	Enter DIC ZBC.
8-20	Enter applicable Stock Number (mandatory entry).
23-24	Enter UI IAW appendix A-48.

FIELD POSITIONS	INSTRUCTIONS
25-33	Enter the item description.
34-39	Enter NMFC IAW the NMFC Guidebook (see note).
40	Enter Freight Rating LTL IAW appendix A-49 (see note).
41	Enter type of Item Code - DICOMSS only - appendix A-31.
42	Enter Transportation Compatibility Code - DICOMSS only - appendix A-68.
43	Density Code entered in record space by computer program.
44	Enter Physical Security Code IAW appendix A-28 and assigned by DSC.
45	Enter NMFC Suffix IAW DLAM 4500.32R (see note).
46	Leave blank.
47	Enter the Freight Rating LCL IAW appendix A-49 (see note).
48	*Enter DEMIL Code, appendix A-35.
49-53	Enter Water Commodity Code IAW DLAM 4500.32R (see note).
54-55	Enter the Air Commodity Code IAW DoD 4500.32R except for Air Challenge Exempt items. For Air Challenge Exempt Items enter the Air Challenge Exempt Code in pos. 54 IAW appendix A-94 and the Special Handling Code IAW DoD 44500.32R in pos. 55 (see note).
56	Enter the Air Cargo Dimension IAW DLAM 4500.32R (see note).
57	Enter Storage in Transit Code IAW appendix A-51.
58-63	Enter the actual unit weight in four whole numbers and two decimals; i.e., 26 lbs. 002600, 2/100 lbs. - 000002, 3 1/2 lbs. - 00035, Minimum 000001.
64-69	Enter actual unit cube in three whole numbers and three decimals; i.e., 32 cu. ft. - 032000, 1/1000 cu. ft. - 000001, 8 5/100 cu. ft. 008050, Minimum 000001.
70	Enter the Shelf-Life Code IAW appendix A-47.
71	Leave blank.
72	Enter the Inventory Category Code IAW appendix A-54.

FIELD POSITIONS	INSTRUCTIONS
73-74	Enter Hazardous Storage Compatibility Code, appendix A-33.
75	Enter Special Requirement Code IAW appendix A-81
76	Enter Commodity Manager Code IAW appendix A-44.
77-78	Enter FRC of organization element preparing the Item Locator Record Card.

*DEMIL Code is a DSC provided data element through the MOWASP Data Bank. May be entered in Locator Record by local action if record is blank or invalid.

NOTE: Changes to freight classification data will be accomplished by DSC's only. When such a change is sought by DLA Activities, it will be necessary for the activity to contact the DSC managing the applicable NSN and arrange to have the desired input prepared by the center. However, it is allowable for the activities to add freight data to the locator record when the locator record is blank. When this occurs, the new freight data will be automatically generated to the data bank, then to the responsible DSC, who will either perpetuate the data if considered correct, or change if considered incorrect and provide the data to DIDS. Exception, DICOMSS data is not maintained by the MOWASP data, thus existing Freight Classification data can be overlayed by the DLA Depot but will require input of a DICOMSS type item code.

(2) To delete data elements, the Item Locator Record Card will be prepared/completed as follows:

FIELD POSITIONS	INSTRUCTIONS
1-3	Enter DIC ZBD.
8-20	Enter the applicable Stock Number (mandatory entry).
21-76	All Data Elements enter 9 in all positions to be deleted; i.e., enter 9 in pos. 23-24 to delete UI, or enter 9 in pos. 70 to delete Shelf-Life Code.
	Freight classification data elements in positions 34-40, 45, 47, 49-56 cannot be deleted by DLA Depots.
80	Deleted Item Code enter 9 if the deleted Item Flag is to be deleted; otherwise, leave blank.

5. DISPOSITION OF FORM

The completed Item Locator Record Card will be forwarded to the ODS for processing Locator update and central data bank maintenance. Violations will be processed IAW appendix E-073 V.

APPENDIX E-073 V

ITEM LOCATOR RECORD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-73, Basic Item Locator Record Card, DIC ZBC.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-17.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction and reentry of Item Locator Record addition, deletion and change cards which have been rejected from computer processing. MOWASP Data Control Branch and/or organization designated by the FRC on the Violation Printout (F-85) are responsible for the correction of errors and reentry of the card as required. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AN	Unit of Issue invalid or blank.
AY	NSN invalid.
HB	Shelf-Life Code invalid.
HO	Commodity Manager Code invalid.
IA	LTL Code invalid.
IB	LCL Code invalid.
IC	Water Commodity Code invalid.
ID	Air Commodity Code invalid.
IE	Unit Weight invalid.
IF	Unit Cube invalid.
IG	NMFC Code not all numeric or not all blank.
IS	Hazardous Storage Compatibility Code invalid.
JQ	Storage in Transit Code invalid.
JR	Air Cargo Dimension Code invalid.

VIOLATION REASON CODE	DEFINITION
LF	NMFC Suffix Code not all numeric or not all blank.
LN	Locator Subrecord is not on file.
LO*	Location Subrecord in on file.
LR	Inventory Category Code invalid.
LS	Special Requirement Code invalid.
MW	Physical Security Code invalid.
XO	DEMIL Code invalid.

*Applicable to ZBD only.

4. PROCESSING/RESEARCH REQUIRED

a. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR CONDITION

Unit of Issue (pos. 23-24) other than authorized in appendix A-48.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to ascertain the correct Unit of Issue.

b. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION

NSN (pos. 8-20) contained alphas or was omitted.

(2) PROCESSING RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct NSN.

c. VIOLATION REASON CODE HB.

(1) REASON FOR VIOLATION/ERROR CONDITION

Shelf-Life (pos. 70) other than authorized in appendix A-47.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Shelf-Life Code. Refer unresolved problems to the Stock Readiness Branch of the Warehousing Division.

d. VIOLATION REASON CODE HO.

(1) REASON FOR VIOLATION/ERROR CONDITION

Commodity Manager Code (pos. 76) other than authorized in appendix A-44.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Commodity Manager Code.

e. VIOLATION REASON CODE IA.

(1) REASON FOR VIOLATION/ERROR CONDITION

LTL Code (pos. 40) other than authorized in appendix A-49.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct LTL Code.

f. VIOLATION REASON CODE IB.

(1) REASON FOR VIOLATION/ERROR CONDITION

LCL Code (pos. 47) other than authorized in appendix A-49.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct LCL Code.

g. VIOLATION REASON CODE IC.

(1) REASON FOR VIOLATION/ERROR CONDITION

Water Commodity Code (pos. 49-53) other than authorized in DLAM 4500.32R.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Water Commodity Code.

h. VIOLATION REASON CODE ID.

(1) REASON FOR VIOLATION/ERROR CONDITION

Air Commodity Code (pos. 54-55) invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the office represented by the FRC reflected in pos. 77-78 to obtain the correct Air Commodity Code.

i. VIOLATION REASON CODE IE.

(1) REASON FOR VIOLATION/ERROR CONDITION

Unit Weight (pos. 58-63) contains alphas.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the Correct Unit Weight.

j. VIOLATION REASON CODE IF.

(1) REASON FOR VIOLATION/ERROR CONDITION

Unit Cube (pos. 64-69) contains alphas.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Unit Cube.

k. VIOLATION REASON CODE IG.

(1) REASON FOR VIOLATION/ERROR CONDITION

NMFC (pos. 34-39) not all numeric or not all blank.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct NMFC Code.

l. VIOLATION REASON CODE IS.

(1) REASON FOR VIOLATION/ERROR CONDITION

Hazardous Storage Compatibility (pos. 73-74) other than authorized in appendix A-33.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Hazardous Application/Storage Compatibility Application Code. Refer unresolved problems to the Methods and Standards Branch of the Office of Planning and Management.

m. VIOLATION REASON CODE JQ.

(1) REASON FOR VIOLATION/ERROR CONDITION

Storage in Transit Code (pos. 57) other than authorized in appendix A-51.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Storage in Transit Code.

n. VIOLATION REASON CODE JR.

(1) REASON FOR VIOLATION/ERROR CONDITION

Air Cargo Dimension (pos. 56) other than authorized in DLAM 4500.32R.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Air Cargo Dimension Code.

o. VIOLATION REASON CODE LF.

(1) REASON FOR VIOLATION/ERROR CONDITION

NMFC Suffix (pos. 45-46) other than all numeric or all blank.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct NMFC Suffix.

p. VIOLATION REASON CODE LN.

(1) REASON FOR VIOLATION/ERROR CONDITION

An attempt to process an action for an NSN which does not exist in the Basic Item Locator Record.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, refer to the F-34 or the F-51 to ascertain the correct NSN.

q. VIOLATION REASON CODE LO.

(1) REASON FOR VIOLATION/ERROR CONDITION

An attempt to delete an NSN for which a subrecord exists.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, discontinue research since all subrecords must be deleted prior to deletion of the basic record.

r. VIOLATION REASON CODE LR.

(1) REASON FOR VIOLATION/ERROR CONDITION

Inventory Category Code (pos. 72) other than authorized in appendix A-54.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Special Requirements Code.

s. VIOLATION REASON CODE LS.

(1) REASON FOR VIOLATION/ERROR CONDITION

Special Requirements Code (pos. 75) other than authorized in appendix A-81.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Special Requirements Code.

t. VIOLATION REASON CODE MW.

(1) REASON FOR VIOLATION/ERROR CONDITION

Physical Security Code (pos. 44) other than authorized in appendix A-28.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Item Locator Record Form for keypunch errors.

(b) If keypunching was correct, contact the FRC reflected in pos. 77-78 to obtain the correct Physical Security Code.

u. VIOLATION REASON CODE XO.

(1) REASON FOR VIOLATION/ERROR CONDITION

DEMIL Code (pos. 48) other than authorized by appendix A-35.

(2) PROCESSING/RESEARCH REQUIRED

(a) Check for keypunch errors.

(b) Contact DSC for valid Code.

5. REENTRY INSTRUCTION

a. When the correct data has been determined, annotate the correction directly below the erroneous data field on the Violation Printout (F-85) using a ballpoint pen to print legible characters.

b. Keypunch a new Basic Item Locator Record card (General Purpose Card) using corrected data and forward to Office of Data Systems for reentry into the applicable process.

APPENDIX E-074 P

CLASSIFICATION SUSPENSE DELETE CARD

1. FORM/REPORT USED

Appendix B-74, Classification Suspense Delete Card.

2. REASON/CRITERIA FOR PREPARATION

This card is prepared in the format of appendix B-74 and forwarded for mechanical processing when an item or a portion of that item in the Classification Suspense File (Condition J, K, or L) was shipped or disposed of without changing the condition.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Quality Control Branch, Management Support Office and Inspection Branch, Receiving Division are responsible for the preparation and processing of this form.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. Disposition instructions for Condition J, K, or L materiel will be furnished by the DSC on duplicate copy of the DD Form 1225 or SF 364.

(1) When materiel is to be returned/reshipped, an MRO, DIC A5_, will be attached to the DD Form 1225.

(a) Verify the following information by comparison of the A5_, F-22 (Classification Suspense Report), DD Form 1225 or SF 364 and materiel:

Stock Number
Quantity
Condition
Document Number from F-22 and DD Form 1225, or SF 364

(b) Should discrepancies exist, resolve differences with the DSC/ICP prior to preparation of Classification Suspense Delete Card.

(c) Match and remove from the suspense file the partially prepunched DAC card. Destroy the card.

(d) Process the MRO attached to the DD Form 1225 or SF 364 in accordance with chapters 3, 4, and/or 60 of this volume.

(e) Prepare a Classification Suspense Delete Card in the format of appendix B-74 by extracting data from the MRO and DD Form 1225, or SF 364.

(2) When disposition instructions for other than return/reshipment are annotated on the DD Form 1225 or SF 364:

(a) Verify the following information by comparison of the DD Form 1225/SF 364, F-22 (Classification Suspense Report) and the materiel:

Stock Number
Quantity
Condition
Document Number from F-22 and DD Form 1225, or SF 364

(b) Should discrepancies exist, resolve differences with the DSC/ICP prior to preparation of Classification Suspense Delete Card.

(c) Match and remove from the suspense file the partially prepunched DAC card. Destroy the card.

b. Prepare a Classification Suspense Delete Card in the format of appendix B-74 by extracting data from the DD 1225 or SF 364.

5. PROCEDURES/INSTRUCTIONS FOR PROCESSING RESPONSE OR RETURNED FORM/REPORT

Not applicable.

6. DISPOSITION OF FORM/REPORTS AFTER FINAL ACTION

Upon completion of keypunching of Classification Suspense Delete Card required by this appendix, they are forwarded to mechanical processing equipment to clear the Classification Suspense File.

APPENDIX E-074 V

CLASSIFICATION SUSPENSE DELETE CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-74, Classification Suspense Delete Card, DIC ZHW

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-40.

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the correction and reentry of Classification Delete Cards which have been rejected from the computer. The Quality Control Office is responsible for the correction of errors and reentry of the card as required. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Invalid Condition Code.
AS	Invalid Quantity.
AY	Invalid NSN.
SY	Unmatched in the file.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AF.

Indicates data in pos. 71 was blank or other than J, K, or L.

b. VIOLATION REASON CODE AS.

Indicates data in pos. 25-29 contains blanks, alphas, all zeros.

c. VIOLATION REASON CODE AY.

Indicates data in pos. 8-20 contains blanks, alphas, all zeros.

d. VIOLATION REASON CODE SY.

Indicates the NSN in pos. 8-20 and/or the Document Number/location is pos. 30-44/46-54 does not match information in the Classification Suspense File.

5. REENTRY INSTRUCTIONS

a. As original data was verified prior to preparation of Classification Suspense Delete Card, violation resulted from either a keypunch error or manual transcription error.

(1) Compare error fields to keypunch worksheet and annotate the correct data below the erroneous data fields in ink or distinctive colored pencil.

(2) If the worksheet contains invalid data, require the originator of the worksheet to submit corrected information. Annotate this corrected information to the worksheet and below the erroneous data fields in ink or distinctive colored pencil.

b. Forward the annotated Violation Printout, appendix F-85, for keypunching of corrected transaction and reentry into the applicable process.

APPENDIX E-075 P

ITEM LOCATOR RECORD CARD (FREIGHT CLASSIFICATION DATA)

1. FORM USED

The Item Locator Record Card (Freight Classification Data), (Local Form), appendices B-75 and D-19.

2. REASON/CRITERIA FOR PREPARATION

a. The Item Locator Record Card (Freight Classification Data) (Local Form) is prepared and submitted when it is necessary to change data elements (NMFC and LTL Codes) in the Basic Item Locator Record wherein the data to be changed pertains to all Stock Numbers with the same data.

b. The Item Locator Record Card (Freight Classification Data) is also used to inquire the Item Locator Record for all NSNs with the same NMFC.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Personnel of the Shipment Planning Branch, Transportation and Traffic Management Office, will be responsible for the determination of Freight Classification Data, preparation, and timely submission of such data for keypunching and inclusion into computer records.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM

a. Source(s) of Information.

Whenever an error in NMFC or LTL Codes is noted, such errors will be reported to the Shipment Planning Branch, Transportation and Traffic Management Office. Upon notification of a discrepancy, the Shipment Planning Branch will prepare and submit a local form, "Item Locator Record" (Freight Classification Data) to change applicable data fields. Refer to the following publications/ appendices to determine correct Freight Classification Data.

(1) National Motor Freight Classification (NMFC) Guidebook.

(2) Appendix A-49.

b. Preparation of Form.

Prepare input in the format of appendix B-75.

c. Signature Requirements.

Signature and date blocks on the local form will be completed by the originator of the form to include name and date.

d. Distribution of Form.

The Item Locator Record Card (Freight Classification Date), (Local Form), may be forwarded through the MOWASP Data Control Branch of the Management Support Office for review prior to keypunching and processing by the Office of Data Systems.

5. DISPOSITION OF FORM

The Item Locator Record Card (Freight Classification Data), (Local Form), will be retained by the MOWASP Data Control Branch or FRC for a period of 24 hours after processing action to Data Systems for resolving Violation and followup.

APPENDIX E-075 V

ITEM LOCATOR RECORD CARD (FREIGHT CLASSIFICATION DATA) VIOLATIONS

1. INPUT DOCUMENT

Appendix B-75, Item Locator Record Card (Freight Classification Data), DIC ZBE.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-19

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction and reentry of Item Locator Record Cards (Freight Classification Data) which have been rejected from computer processing. Reasons for computer rejection and element responsible for corrections are as follows:

VIOLATION REASON CODE	DEFINITION	RESPONSIBLE ORGANIZATION
IG	MNFC other than numeric.	MOWASP Data Control Branch and/or organization designated by the FRC on the Violation Printout (F-85).
IJ	New NMFC.	Same as Reason Code IG.
IA	New LTL Code invalid.	Same as Reason Code IG.
CF	Action Code invalid or blank.	Same as Reason Code IG.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE IG.

(1) REASON FOR VIOLATION/ERROR CONDITION

NMFC has other than numeric characters in pos. 34-39.

(2) PROCESSING/RESEARCH REQUIRED

(a) Check for keypunch error.

(b) Refer to F-51, Emergency Item Locator Record to determine correct NMFC current.

b. VIOLATION REASON CODE IJ.

(1) REASON FOR VIOLATION/ERROR CONDITION

NMFC has other than numeric characters in pos. 50-55.

(2) PROCESSING/RESEARCH REQUIRED

(a) Check for keypunch error.

(b) Refer to NMFC Guidebook to determine correct new NMFC.

c. VIOLATION REASON CODE IA.

(1) REASON FOR VIOLATION/ERROR CONDITION

Other than authorized LTL Code (alpha) as defined in appendix A-49.

(2) PROCESSING/RESEARCH REQUIRED

(a) Check for keypunch errors.

(b) Refer to appendix A-49 to determine correct LTL Code.

d. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION

Action Code is either invalid or blank.

(2) PROCESSING/RESEARCH REQUIRED

(a) Check for keypunch errors.

(b) Refer to appendix B-75 to determine correct Action Code.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction directly below the erroneous data field on the Violation Printout (F-85) using a ballpoint pen to print legible characters.

b. Keypunch a new Item Locator Record Card (Freight Classification Data) using corrected data, and forwarded to Office of Data System for reentry into the applicable process.

APPENDIX E-077 P

LOCATION SURVEY REQUEST

1. PURPOSE

a. In order to achieve maximum effectiveness in day-to-day operations, and to obtain the desired results of physical inventories, reconciliation of defense depot Locator Record Files with DSC accountable records will be accomplished by conducting daily location surveys. All materiel in depot storage will be surveyed at least once each year. Reconciliation of depot locator records with DSC records will be accomplished quarterly.

b. A total of 25 location surveys can be opened during one run. A total of 99,999 surveys can be in process at any one time. All lot numbers will be assigned by the computer.

2. APPENDIX USED

Appendix B-77, Location Survey Request Card, DIC ZBG.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Inventory Control Office, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. The Inventory Control Office is responsible for initiating and the conduct of a location survey. A Location Survey Request Card must be initiated IAW the formats of appendix B-77, DIC ZBG, to request the computer to generate the Location Survey Cards, DIC ZBH, appendix B-78, or Location Survey Listing, appendix F-152.

b. The Inventory Control Office will enter ZBG data through program $$UWME10.

APPENDIX E-077 V

LOCATION SURVEY REQUEST VIOLATIONS

1. INPUT DOCUMENT

Appendix B-77, Location Survey Request Card, DIC ZBG.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-21

3. PURPOSE CONTENTS AND RESPONSIBILITIES

Provides instructions for research, correction, and reentry of Location Survey Requests which have been rejected because recorded data did not pass the computer edit criteria. The Inventory Control Office is responsible for the correction and reentry of invalid data. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
HE	Invalid Type Survey Code.
IP	Low parameter exceeds high parameter.
OI	Invalid location parameters.
2L	Invalid area control branch.
2M	Invalid Last Cycle Code.
2N	Sample interval or low/high parameter not entered on sample survey.

4. PROCESSING/RESEARCH INSTRUCTION

a. VIOLATION REASON CODE HE.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HE indicates that Type of Survey, pos. 6, in input format, was other than C, L, S, or P.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain suspense copy of the coding sheet for Location Survey Request, appendix B-77.

(b) Match data elements on the Violation Printout, appendix F-85, with the coding sheets until the appropriate coding sheet is located.

(c) Compare erroneous data elements on the Violation Printout with same data element on the coding sheet.

1. If entries are not identical, annotate the correct Type of Survey Code as reflected on the coding sheet onto the Violation Printout directly below the erroneous Type of Survey Code, pos. 6. Use ink or a distinctive colored pencil.

2. If entries are identical and contain a C, L, S, or P, advise ODS that a correct entry was rejected, so corrective action will be taken to prevent reocurrence.

3. If entries are blank on both the coding sheet and the Violation Printout, refer to the location survey schedules to determine correct code. Annotate the correction directly below the blank Type of Survey Code, pos. 6, on the Violation Printout.

b. VIOLATION REASON CODE IP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC IP indicates that the Low Location Parameter, pos. 8-19, exceeds the High Location Parameter, pos. 20-31.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain suspense copy of the coding sheet for the Location Survey Request, appendix B-77.

(b) Locate appropriate coding sheet by comparing data on the Violation Printout with data recorded on the coding sheet.

(c) Compare the erroneous data elements on the Violation Printout with the same data elements on the coding sheet.

1. If data on coding sheet is not identical to data on Violation Printout, verify that data on the coding sheet is valid. Annotate corrected data in either or both fields as appropriate on the Violation Printout directly below the erroneous field(s), pos. 8-19, and/or 20-31.

2. If data on coding sheet is identical to that on Violation Printout, review the location audit schedule to determine correct location parameter data. Annotate corrected data in either or both fields as appropriate on the Violation Printout directly below the erroneous field(s), pos. 8-19 and/or 20-31.

c. VIOLATION REASON CODE OI.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC OI indicates that Location Parameter, pos. 8-31, in input document contains blank columns, the parameter duplicate completely, or those in part, those in other input Location Survey Request Cards submitted for survey pull in the same cycle, or does not meet the edit criteria of appendix B-77.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain suspense copy of coding sheet for Location Survey Request, appendix B-77.

(b) Locate appropriate coding sheet by comparing data on Violation Printout with data recorded on coding sheet.

(c) Compare erroneous data element on Violation Printout with same data element on coding sheet. If data on coding sheet is not identical to data on Violation Printout, verify that data on coding sheet is valid. Annotate corrected data on Violation Printout directly below the erroneous Location Parameter, pos. 8-31.

d. VIOLATION REASON CODE 2L.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC 2L indicates that Area Control Branch has not been entered in pos. 5 of the input format.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain suspense copy of coding sheet for Location Survey Request, appendix B-77.

(b) Locate appropriate coding sheet by comparing data on Violation Printout with data recorded on coding sheet.

(c) Compare erroneous data elements on Violation Printout with same data elements on coding sheet.

1. If data on coding sheet is not identical to data on Violation Printout, verify that data on coding sheet is valid. Annotate correct Area Control Branch (ACB) on Violation Printout directly below erroneous or blank field.

2. If data on coding sheet is identical to data on Violation Printout, review survey schedule to determine correct ACB. Annotate corrected data on Violation Printout directly below ACB, pos. 5.

e. VIOLATION REASON CODE 2M.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC 2M indicates the last Cycle Code, pos. 7, of input format, was other than E or blank.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain suspense copy of the input coding sheet for the Location Survey Request, appendix B-77.

(b) Compare the erroneous data elements on the Violation Printout with same data elements on coding sheet.

(c) Annotate corrected data directly below the data in pos. 7 of the printout.

f. VIOLATION REASON CODE 2N.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC 2N indicates the sample interval was not entered in pos. 41-45 or Low/High Parameter was not in pos. 8-31 of input format when Type of Survey Code was S or P.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Obtain suspense copy of input format for appendix B-77.

(b) Compare erroneous data on Violation Printout with same data on the input format.

(c) Annotate correct data directly below data in pos. 41-45 of the printout.

5. REENTRY INSTRUCTIONS

a. Reenter the corrected data via program $$UWME10.

b. Retain copy of the input coding format for the appendix B-77 pending receipt of Location Survey Cards or Listing.

APPENDIX E-078 V

LOCATION SURVEY CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-78, Location Survey Card, DIC ZBH.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-22

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

Provides instructions for research, correction, and reentry of Location Survey Cards which have been rejected because recorded data did not pass computer edit criteria. The Inventory Control Branch is responsible for correction and reentry of invalid data. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AY	Invalid NSN.
AP	Invalid Location.
HG	Invalid Type of Storage.
AF	Invalid Condition.
HW	Invalid Inspection Date.
CK	Invalid Type of Pack.
HH	Invalid Date of Pack.
HU	Invalid Unit Pack.
WZ	Invalid Survey Number.
HE	Invalid Type of Survey Code.
PU	Input does not match record.
AN	Invaild Unit of Issue.
HB	Invalid Shelf-Life Code.
CF	Invalid Action Code.
2K	Invalid Discrepancy/Management Code.

VIOLATION REASON CODE	DEFINITION
E5	No change date entered.
YK	Survey lot number not on record.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

AY indicates that the NSN fields, pos. 17-29, and/or 48-60, contain erroneous alpha or blank characters in the field. The NSN must contain numeric data in pos. 17-22, pos. 23 alpha/numeric, pos. 24-29 numeric and/or pos. 48-53 numeric, pos. 54 alpha/numeric, pos. 55-60 numeric.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout, appendix F-85 to obtain the Physical Warehouse Location Code of the stock, pos. 5-16, for the erroneous NSN(s).

(b) Inspect stock positioned in the above location to ascertain the correct NSN(s).

(c) When the correct NSN(s) cannot be determined by inspection of stock, research supply catalogs to determine proper NSN(s).

(d) Process correct data IAW paragraph 5 below.

b. VIOLATION REASON CODE AP.

(1) REASON FOR VIOLATION/ERROR CONDITION:

AP indicates that the Location field, pos. 5-16, contains erroneous characters. Reference appendix B-78 for validation.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout to obtain NSN, pos. 17-29, for erroneous Location Code entry.

(b) Prepare an Item Locator Inquiry Card, DIC ZBJ, appendix B-79 IAW appendix E-079 P instructions using Action Code FE. This inquiry will result in the preparation of the Locator Record Print Listing, appendix F-37. This listing will provide all item locator data from the basic and subrecords for the NSN identified in the ZBJ card.

(c) Review the Locator Record Print Listing to determine correct Location code. In addition to this review of the Locator listing, possible inspection of stock may be required in order to obtain correct data.

(d) Process correct data IAW paragraph 5 below.

c. VIOLATION REASON CODE HG.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HG indicates that data in the Type Storage Code field, pos. 32-34, was other than codes in appendix A-45.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout to obtain the Physical Warehouse Location Code, pos. 5-16.

(b) Obtain the Warehouse Planograph. Compare the Physical Warehouse Location Code reflected on F-85 listing to matching Location Code on the planograph. Obtain correct Type Storage Code for the matching location from the planograph.

(c) Process correct data IAW paragraph 5 below.

d. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC AF indicates that code in pos. 35 is other than authorized Condition Code as defined in appendix A-16.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review Violation Printout to obtain appropriate NSN for erroneous Condition Code entry (pos. 17-29 for pos. 35 Condition Code).

(b) Prepare Item Locator Inquiry Card(s) IAW appendix E-079 P instructions using Action Code FE. This inquiry will result in the preparation of the Locator Record Print Listing. This listing will provide all item locator data from the basic and subrecords for the NSN identified in the ZBJ card.

(c) Review the Locator Record Print Listing to determine the correct Condition Code. In addition to this review of the Locator listing, possible inspection of stock may be in order to obtain correct data.

(d) Process correct data IAW paragraph 5 below.

e. VIOLATION REASON CODE HW.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HW indicates that the Inspection Date field, pos. 61-64, contains incomplete or invalid data. Inspection Date may be zeros or when filled, must contain 01-12 in the first two positions, alpha or numeric in the third position, and numeric or zeros in the last position.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Contact the Quality Control Branch and request research against Surveillance Inspection Schedules and Records to determine the correct Inspection Date.

(b) Process correct data IAW paragraph 5 below.

f. VIOLATION REASON CODE CK.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC CK indicates that data in Type of Pack field, pos. 30, is invalid. Type of Pack Code is required for Commodity Manager Code S (subsistence) and are 1, 2 and 4. Any other numeric or alpha code is invalid. The field should be blank for all other commodity managers.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout to determine if error is evident.

(b) When the error cannot be detected by analysis of data on the Violation Printout, inspect the stock to determine the correct Type of Pack.

(c) Process correct data IAW paragraph 5 below.

g. VIOLATION REASON CODE HH.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HH indicates that the Date of Pack field, pos. 39-42, contains incomplete or invalid data. Data of Pack may be blank or when filled must contain 01-12 in the first two positions and numeric digits in the last two positions. The date of expiration cannot exceed 63 months from current month. An additional 3 months is provided on the maximum shelf-life period to accommodate items that are age controlled by quarters of the year (reference MIL STD 1523).

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout to determine if the error is evident.

(b) When the error cannot be detected by analysis of data on the Violation Printout, inspect stock to determine the correct Date of Pack.

(c) Process correct data IAW paragraph 5 below.

h. VIOLATION REASON CODE HU.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC HU indicates that the Unit Pack field, pos. 43-47, contains invalid data. Alpha characters are erroneous.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Inspect stock to determine correct Unit Pack data.

(b) Process correct data IAW paragraph 5 below.

i. VIOLATION REASON CODE WZ.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC WZ indicates that the Lot Survey Number, pos. 74-78, contains other than numeric digits 0-9.

(2) PROCESS/RESEARCH REQUIRED:

(a) Review the Violation Printout to determine location parameter.

(b) Review location survey schedule to determine the correct data.

(c) Process correct data IAW paragraph 5 below.

j. VIOLATION REASON CODE YK.

(1) REASON FOR VIOLATION/ERROR CONDITION:

YK indicates that the Survey Lot Number, pos. 74-78, in the input card does not match the computer assigned number on file.

(2) PROCESS/RESEARCH REQUIRED:

(a) Review the Violation Printout to determine if the error is evident and determine the correct lot number.

(b) Process correct data IAW paragraph 5 below.

k. VIOLATION REASON CODE HE.

(1) REASON FOR VIOLATION/ERROR CONDITION:

HE indicates Type of Survey Code, pos. 4, is other than C, L, S or P.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout to determine if error is evident.

(b) Process correct Type Survey Code IAW paragraph 5 below.

l. VIOLATION REASON CODE PU.

(1) REASON FOR VIOLATION/ERROR CONDITION:

PU indicates location did not match the original location parameter associated with the card survey number.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Compare location and survey number on card with appendix F-90 report for proper survey number/location assignment. Error will be identified as either an erroneous entry or transposition of survey number or location digits.

(b) Process correct data IAW paragraph 5 below.

m. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR CONDITION:

AN indicates an invalid UI, pos. 36-37.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review the Violation Printout to obtain erroneous data.

(b) Determine correct UI and process data IAW paragraph 5 below.

n. VIOLATION REASON CODE HB.

(1) REASON FOR VIOLATION/ERROR CONDITION:

HB indicates an invalid Shelf-Life Code, pos. 31, of input.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review Violation Printout to determine erroneous data.

(b) Contact inspection to determine correct Shelf-Life Code and process IAW paragraph 5 below.

o. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC CF indicates Action Code, pos. 79-80, is invalid in this process.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review Violation Printout to determine erroneous data.

(b) Determine correct Action Code and process IAW paragraph 5 below.

p. VIOLATION REASON CODE 2K.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC 2K indicates and invalid Descrepancy/Management Code, pos. 65-66/ 70-73.

(2) PROCESSING/RESEARCH REQUIRED:

(a) Review Violation Printout to determine erroneous data.

(b) Reenter correct data if required by processing IAW paragraph 5 below.

q. VIOLATION REASON CODE E5.

(1) REASON FOR VIOLATION/ERROR CONDITION:

VRC E5 indicates no data has been entered in pos. 31-64 with Action Code FZ in pos. 79-80.

(2) PROCESSING/RESEARCH REQUIRED:

Review Violation Printout for error. Check input format and survey cards and reenter correct data by processing IAW paragraph 5 below.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction on the Violation Printout directly below the erroneous entry using ink or a distinctive colored pencil.

b. Reenter the corrected data via program $$UWME10.

APPENDIX E-079 P

INQUIRY OF THE BASIC ITEM LOCATOR AND SUBRECORD

1. FORM/REPORT USED

Locator Inquiry Form (local form)

2. REASON/CRITERIA FOR PREPARATION

This procedure describes the method of inquiry into the Basic Item Locator and Subrecord. Inquiry may be by stock number with Action Code FE, FF, FG, GA, or by FSC with Action Code FC, FH, FJ, or FK.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

The MOWASP Data Control Branch, Management Support Office is designated as the control point for locator inquiry to eliminate duplication and unnecessary reports. Inquiries for Action Codes FE, FF, and FG may be forwarded direct to keypunch if desired by Directorate of Storage and Transportation. Inquiries for Action Codes FC, FH, FJ, FK, and FO must be controlled and input coordinated with Data Systems prior to input, because they require a total scan of the locator file and involve a large amount of computer run time.

4. PROCEDURES/INSTRUCTIONS FOR PREPARATION OF FORM/REPORT

a. The Locator Inquiry Form (local form) is prepared as outlined in appendix B-79 utilizing Action Codes (listed below) to produce desired report(s).

ACTION CODE	DEFINITION
FA	Inquiry to locator record for all Shelf-Life Codes other than 0.
FB	Inquiry to locator record for specific Shelf-Life Codes.
FC	Inquiry to basic and subrecord to obtain all locations within low and high FSC parameters.
FD	Inquiry to locator record for Physical Security Codes other than U.
FE	Inquiry by Stock Number to basic and subrecord.
FF	Inquiry by Stock Number to subrecord with multilocation per page.
FG	Inquiry by Stock Number to subrecord with single location per page.

ACTION CODE	DEFINITION
FH	Inquiry to obtain subrecord of all locations for a specific condition code other than Condition Code A.
FJ	Inquiry to subrecord to obtain all locations for a specific manager within low and high FSC parameters.
FK	Inquiry to subrecord to obtain all locations for a specific popularity group code within low and high FSC parameters.
FO	Inquiry to locator record for auditor sample printout.
GA	Inquiry to locator record for Commissary Item by Stock Number.
GB	Inquiry to locator record for Commissary Item by Manager.

b. Prepare/complete a local coding sheet as follows:

FIELD POSITION(S)	INSTRUCTIONS
1-3	Enter ZBJ.
6	Enter Commodity Manager Code for data required. Mandatory for Action Code FJ.
8-20	Enter Stock Number when single Stock Number is requested.
13-16	Enter high FSC parameter. Both 8-11 and 13-16 fields are mandatory with Action Codes FA, FB, FC, FD, FJ, and FK.
23	Enter Popularity Group Code, mandatory with Action Code FK.
24	Enter Shelf-Life Code, (other than 0) mandatory with Action Code FB. Not required for Action Code FA.
25	Enter Physical Security Code, (other than U) mandatory with Action Code FD.
71	Enter Condition Code, mandatory with Action Code FH.
77-78	Enter Functional Routing Code of the individual preparing the request.
79-80	Enter Action Code (paragraph 4a above) to obtain the type inquiry desired.

5. DISTRIBUTION OF FORM

Local coding sheet in format of appendix B-79 will be forwarded via keypunch services to Office of Data Systems.

6. DISPOSITION OF FORM

Local coding sheets will be returned to MOWASP Data Control Branch, Management Support Office and retained two days to be utilized in processing any violations resulting from processing this input.

APPENDIX E-079 V

LOCATOR INQUIRY VIOLATIONS

1. INPUT DOCUMENT

Appendix B-79, Basic Item Locator and Subrecord Inquiry Form (Local Form), DIC ZBJ.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-23

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of the Basic Item Locator and Subrecord Inquiry Forms which have been rejected from computer processing. The responsible organization is the MOWASP Data Control Branch, and/or organization designated by the FRC on the Violation Printout (F-85). Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
AF	Condition Code invalid.
AY	Stock Number invalid.
CF	Action Code invalid.
HB	Shelf-Life Code invalid.
HO	Commodity Manager Code invalid.
LK	High FSC parameter invalid.
MW	Physical Security Code invalid.
OQ	Popularity Group Code invalid.
XE	Low FSC parameter invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AF.

(1) REASON FOR VIOLATION/ERROR CONDITION

Condition Code is A or blank.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunch was correct, refer to the organization indicated by the FRC Code for Condition Code desired IAW appendix A-16.

b. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION

Stock Number invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunching was correct, refer to the organization indicated by the FRC Code for Stock Number desired.

c. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION

Action Code invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch errors.

(b) If keypunching was correct, refer to the organization indicated by the FSC Code for the correct Action Code.

d. VIOLATION REASON CODE HB.

(1) REASON FOR VIOLATION/ERROR CONDITION

Shelf-Life Code invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunching was correct, refer to the organization indicated by the FRC Code for Shelf-Life Code desired IAW appendix A-47.

e. VIOLATION REASON CODE HO.

(1) REASON FOR VIOLATION/ERROR CONDITION

Commodity Manager Code invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunching was correct, refer to the organization indicated by the FRC Code for Commodity Manager Code desired IAW appendix A-44.

f. VIOLATION REASON CODE LK.

(1) REASON FOR VIOLATION/ERROR CONDITION

High FSC parameter invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunching was correct, refer to the organization indicated by the FRC Code for the correct high FSC parameter.

g. VIOLATION REASON CODE MW.

(1) REASON FOR VIOLATION/ERROR CONDITION

Physical Security Code invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunching was correct, refer to the organization indicated by the FRC Code for the correct Physical Security Code desired IAW appendix A-28.

h. VIOLATION REASON CODE OQ.

(1) REASON FOR VIOLATION/ERROR CONDITION

Popularity Group Code invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunching was correct, refer to the organization indicated by the FRC Code for Popularity Group Code desired IAW appendix A-52.

i. VIOLATION REASON CODE XE.

(1) REASON FOR VIOLATION/ERROR CONDITION

Low FSC parameter invalid.

(2) PROCESSING/RESEARCH REQUIRED

(a) Research Suspense File of Locator Inquiry Forms for keypunch error.

(b) If keypunching was correct, refer to the organization indicated by the FRC Code for the correct low FSC parameter.

5. REENTRY INSTRUCTIONS

a. When the correct data has been determined, annotate the correction directly below the erroneous data field on the Violation Printout (appendix F-85) using a ballpoint pen to print legible characters.

b. Prepare keypunch or optical scanner input for a new Locator Inquiry Card using corrected data and forward to ODS for reentry into the applicable process.

c. Retain copy of coding format for the appendix B-79 pending receipt of the requested listing; then destroy the copy of coding format.

APPENDIX E-080 P

MOFAST PARTIAL OR OFFER PROCESS FOR DEPMEDS

1. PURPOSE

To provide the process to partial an MRO with a quantity of 0001 and to input the assembly container number as the offer to transportation.

2. APPENDICES USED IN THIS PROCESS

a. Chapter 73.

b. Appendix B-142.

c. Appendix D-189.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Transportation and Shipping Division, DS/T.

4. PROCEDURES/INSTRUCTIONS

a. General.

This procedure provides the capability to process a DEPMEDS MRO through the MOWASP Shipping Process by performing the following functions:

(1) Partial an MRO with a quantity of 0001 to ship a unit assembly in more than one increment.

(2) Enter the assembly container number into the shipment unit record as the offer to transportation.

(3) Reverse the transportation control number from the DEPMEDS container file.

b. CRT Initialization.

(1) Key in program number $$UWFF80.

(2) Depress the ENTER key. This entry will dedicate the CRT to the MOFAST partial and offer process for DEPMEDS until another $$ program call is input. The following message will display:

UWFF80 MOFAST PARTIAL OR OFFER FOR DEP-MEDS

ACTION _

ENTER ONE OF THE FOLLOWING ACTIONS:

O = OFFER
P = PARTIAL
C = CANCEL

(3) Entry of Action Code O will generate the following display:

UWFF80 MOFAST OFFER FOR DEP-MEDS

ACTION O

ENTER SU-NUMBER AND CK-DT 0000000000000 0

LOOSE CONTAINERS

UNITIZED CONTAINERS

FINAL-CODE _

(a) Enter seven or 13 digit shipment unit number, check digit, up to 96 loose container numbers and up to 100 unitized container numbers. Tab between each container. If all containers are accounted for on that shipment unit, enter a final code of F.

(b) A successful entry will generate the following display:

UWFF80-16 UPDATE IS SUCCESSFUL

(4) Entry of Action Code P will generate the following display:

UWFF80 MOFAST PARTIAL FOR DEP-MEDS

ACTION P

ENTER SU-NUMBER AND CK-DT 0000000000000 0

ENTER TOTAL NUMBER OF ADDITIONAL PARTIALS NEEDED

SU-NUMBER TCN SU-NUMBER TCN

(a) Enter a seven or 13 digit shipment unit number, check digit and the number of partials needed in addition to the basic shipment unit as shown below:

UWFF80 MOFAST PARTIAL FOR DEP-MEDS

ACTION P

ENTER SU-NUMBER AND CK-DT 1700169000000 8

ENTER TOTAL NUMBER OF ADDITIONAL PARTIALS NEEDED 2

SU-NUMBER	TCN	SU-NUMBER	TCN

(b) A successful entry will generate the following display:

UWFF80 MOFAST PARTIAL FOR DEP-MEDS

ACTION P

ENTER SU-NUMBER AND CK-DT 0000000000000 0

ENTER TOTAL NUMBER OF ADDITIONAL PARTIALS NEEDED

SU-NUMBER	TCN	SU-NUMBER	TCN
1700169000000	R095894140086NEA	1700169000101	R095894140086NEB
1700169000102	R095894140086NEZ		

(c) If additional partials are needed, enter the shipment unit of the final partial and the number of additional partials required.

(d) If too many partials have been requested, they may be deleted following the procedures in E-169 P, MOFAST Partial Line Delete program.

(5) Entry of Action Code C will generate the following display:

UWFF80 MOFAST CANCEL FOR DEP-MEDS

ACTION C

ENTER SU-NUMBER AND CK-DT 0000000000000 0

LOOSE CONTAINERS

UNITIZED CONTAINERS

(a) Enter 7- or 13-position shipment unit number, check digit, loose and/or unitized container numbers. Enter up to 96 loose and 100 unitized containers. Tab between each container.

(b) This removes the MOFAST flag from the DEPMED container files. To remove the container data from the shipment unit record, follow the process in appendix E-234A.

5. ERROR MESSAGES

Program validation will identify error conditions and return the entry display with the corresponding Error Message at the bottom of the display. The cursor will be positioned at the field containing the error. The Error Messages, with probable cause and corrective action information, are as follows:

ERROR MESSAGE	CAUSE/ACTION
UWFF80-01 INVALID CHECK DIGIT	Probable Cause: The check digit does not match the shipment unit number. Action: Verify the check digit and reenter.
UWFF80-02 DUP LOOSE ENTRIES	Probable Cause: There are entries in the loose container field that match each other. Action: Verify the entry. Delete the duplicate container and reenter.
UWFF80-03 DUP UNITIZED ENTRIES	Probable Cause: There are entries in the unitized container field that match each other. Action: Verify the entry. Delete the duplicate container and reenter.
UWFF80-04 NO LOOSE RECORD FOUND	Probable Cause: A loose container number entered was not found on the file. Action: Verify the entry and reenter.
UWFF80-05 NO UNITIZED RECORD FOUND	Probable Cause: A unitized container entered was not found on the file. Action: Verify the entry and reenter.
UWFF80-06 MUST BE 'F' OR SPACE	Probable Cause: Entry of other than F or space in the final code. Action: Verify the entry and reenter.
UWFF80-07 SU STATUS MUST BE 'A' OR 'B'	Probable Cause: An offer, partial or cancel action was attempted on a shipment unit that was in other than A or B status. Action: Verify the entry and reenter.

ERROR MESSAGE	CAUSE/ACTION
UWFF80-08 GBL-NBR MUST BE CANCEL OR SPACES	Probable Cause: An offer, partial or cancel action was attempted on a shipment unit assigned to a GBL. Action: Cancel the GBL number and reenter.
UWFF80-09 MSTR-SU MUST BE ZEROS	Probable Cause: An offer, partial or cancel action was attempted on a shipment unit that was part of a consolidated pack. Action: Multi-line shipment units and shipment units that are part of a consolidated pack are not eligible for DEPMED/MOWASP processing.
UWFF80-10 MUST BE DEPMEDS SU	Probable Cause: An offer, partial or cancel action was attempted on a shipment unit not eligible for DEPMED/MOWASP processing. Action: No action necessary.
UWFF80-11 SU RECORD NOT FOUND	Probable Cause: The shipment unit entered was not found on the shipment unit file. Action: Verify shipment unit number and reenter.
UWFF80-13 LI NOT FOUND	Probable Cause: The line item is not found on the line item file. Action: Verify input and reenter.
UWFF80-14 LOOSE CONTAINER ALREADY PROCESSED	Probable Cause: An attempt was made to offer a loose container that had previously been offered. Action: Verify the containers entered and reenter corrected data.
UWFF80-15 UNITIZED CONTAINER ALREADY PROCESSED	Probable Cause: An attempt was made to offer unitized container that had previously been offered. Action: Verify the containers entered and reenter corrected data.
UWFF80-17 PARTIAL NUMBERS CANNOT BE ZEROS	Probable Cause: The number of partials requested was equal to zero. Action: Determine the number of additional partials required and reenter.

ERROR MESSAGE	CAUSE/ACTION
UWFF80-18 ADDITIONAL PARTIAL NUMBERS INVALID	Probable Cause: The number of partials requested exceeded 25. Action: If more than 25 partials are required to complete the shipment, all partials over that amount must be processed manually.
UWFF80-19 PARTIAL GREATER THAN 25	Probable Cause: The partial suffix in the shipment unit number entered is greater than 25. Action: Verify the shipment unit number and reenter.
UWFF80-20 LINE NOT ELIGIBLE FOR UPDATE	Probable Cause: Attempting to partial a line that has already been partialled or is flagged for cancellation. Action: If attempting to obtain additional partials on an SU that has been partialled, the shipment unit of the final partial must be used.
UWFF80-21 INVALID ENTRY DUE TO PENDING DEN/CAN	Probable Cause: An attempt was made to process a shipment unit that has a cancellation or a denial pending. Action: Verify the shipment unit member entered. If correct and a cancellation is pending, the cancellation must be accomplished or overridden before DEPMED processing.
UWFF80-22 NO-LNS-NOT EQUAL TO 1	Probable Cause: An attempt was made to partial a shipment unit with more than one line item. Action: DEPMED shipment units have only one line item. Verify SU number and reenter.
UWFF80-23 LOOSE CONTAINER NOT PROCESSED	Probable Cause: An attempt was made to cancel a loose container that had not been offered. Action: Verify the SU and reenter. If SU number correct, no action required.
UWFF80-24 UNITIZED CONTAINER NOT PROCESSED	Probable Cause: An attempt was made to cancel a unitized container that had not been offered. Action: Verify the SU and reenter. If SU number correct, no action necessary.

ERROR MESSAGE	CAUSE/ACTION
UWFF80-25 NO CONTAINER DATA ENTERED	Probable Cause: A final code has been entered and no containers have been entered. Action: Enter all containers for a partial before entering a final code.
UWFF80-90 BAD RETURN FROM UWFN86XXXXXX	Probable Cause: A system error has been encountered. Action: Annotate the entire error message and notify your supervisor.

APPENDIX E-081 P

PROPERTY DISPOSAL TRANSACTIONS

1. PURPOSE

This procedure prescribes the responsibilities, methods, and actions required to process the shipment of Government-owned materiel to a Property Disposal Office (PDO).

2. REFERENCES USED IN THIS PROCESS

a. Chapter 12.

b. Appendix C-11.

c. Military Service designated document for PDO operated by that Service.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Warehousing Division.

b. Shipping Division.

c. Receiving Division.

4. PROCEDURES/INSTRUCTIONS

a. Orders for the disposal of materiel may be received at the depot from either the Military Service owner of the item or from the applicable DSC. DROs are generally processed in the same manner as MROs and equal care will be taken to assure proper stock selection and subsequent processing.

b. Exception release orders are designated by the entry of a Z in pos. 72 of the incoming release order. This condition requires the acquisition of supplementary data to be utilized in effecting the shipping process and may require a decision to be made outside the computer process.

c. Disposal Release Orders provide for the entry of a quantity to be retained in storage regardless of the quantity directed to be shipped. This retention quantity appears in pos. 55-61 of the DRO and may be blank, zero filled or reflect a quantity. Data entered in the retention field of a DRO will also cause a message to be printed in block GG of the DLA Form 1348-1 as follows:

(1) Blank field - message "Ship Exact" (as reflected in pos. 25-29). Ship the directed quantity and Condition Code to PDO and retain the remaining balance in storage.

(2) Quantity filled - message "Retain (quantity)." Retain the indicated quantity in storage and ship remaining materiel to PDO for the indicated stock number and Condition Code.

(3) Zero filled - message "Ship to Exhaust." Ship all materiel to PDO for the indicated stock number and Condition Code. Retain no stock in storage for the specific stock number and condition.

d. DROs require the same degree of controls and reporting of denials or adjustments to the DSC/ICP as for MROs. When the depot is unable to satisfy the exact quantity to be transferred to the PDO, pos. 25-29, and/or retain the exact quantity in the retention field, pos. 55-61, action will be taken to notify the DSC by providing the applicable documents as specified below:

(1) When the quantity transferred exceeds the quantity indicated in pos. 25-29 of the DRO and the DSC directed retention quantity field has been complied with (quantity reflected in pos. 55-61 is maintained or retention quantity field was zero filled), the depot will confirm the total quantity (including the overage) IAW appendix E-216 P using Action Code DB. This action generates a DIC ARK to the DSC/ICP.

(2) When the quantity in storage for transfer is less than the quantity indicated in pos. 25-29 of the DRO and the DSC directed retention quantity field has been complied with (quantity reflected in pos. 55-61 is maintained or retention quantity field was zero filled), the depot will confirm the quantity transferred IAW appendix E-216 P using Action Code DD. This action generates a DIC ARL to the DSC/ICP.

(3) Off-Line processing will be required when the quantity available in storage is less than the quantity indicated in the DRO retention field. The depot will place the line item in DP Status IAW appendix E-216 P and deny the transaction with a DIC A6E with Management Code Z in pos. 72, reporting quantities in pos. 25-29, and pos. 55-61 as on the DRO and insert the explanation of actual quantity on hand in the remarks block of the A6E. Mail the transaction to the responsible DSC, marked for attention of the Inventory Accounting section of the Stock Control Branch.

(4) When the quantity available in storage for transfer is less than the quantity indicated in pos. 25-29 of the DRO (retention quantity complied with) because of condition, shelf-life, type pack, or reidentification/reclassification action, the depot will confirm the quantity transferred IAW appendix E-216 P using the appropriate Action Code from appendix A-104.

(5) When materiel is known to be commingled in storage and the locator record indicates a Commodity Manager Code W, the depot will transfer the quantity in pos. 25-29 of DRO to the PDO <u>only</u> if pos. 55-61, the retention quantity field is blank. When pos. 55-61 is zero filled or numeric, the depot will place the DRO in DP Status and mail a Disposal Release Denial, DIC A6J with a Management Code C in pos. 72, to the DSC/ICP.

e. Selection of stock for DROs having Condition Codes other than A, B, or C will be controlled in a manner so as to assure the selection of materiel for a specific lot or contract number may be accomplished. This requirement becomes necessary when multiple "lots" of materiel may be in the same suspended or

nonissuable condition and the pertinent DSC has provided disposition instructions for a specific lot or batch. A manually suspended prior copy of a DD Form 1225/SF 364 may require removal from suspense and input prepared for the release of the mechanized suspense.

f. Depots are not permitted to "caselot" upward in making transfers to the PDO because of item packing/packaging characteristics.

g. Movement of Government excess materiel transferred to the PDO will be accomplished when practical. If, for reasons of economy or feasibility, it is impractical to physically move materiel to the PDO, the locator subrecord will be deleted and the materiel plainly marked "Do Not Inventory - Transferred to PDO on Disposal Directive Number_____." Bin locations containing PDO materiel will be deleted and the materiel forwarded to PDO or combined with bulk materiel being held in place.

h. Materiel being transferred to the PDO using Government Truck or Local Delivery modes will be afforded the minimum packing/packaging required to assure arrival at the PDO site without deterioration or physical damage.

i. Materiel being transferred to the PDO under a GBL or CBL must be offered as freight according to MOFAST Shipment Unit integrity restrictions. Once offered these shipments can be confirmed as shipped using either appendix E-235 or E-238, part K, processes.

j. Unit Price - Locally generated DROs will contain a dollar value of $0.00. This will not reject on validation. This situation requires research by the local depot to provide and manually enter the actual Unit Price. Processing personnel may obtain the correct unit price for the NSN involved by SAMMSTEL inquiry or telephone for IPGs I and II and by SAMMSTEL inquiry or TWX for IPG III.

APPENDIX E-083 P

LOCATION RECONCILIATION REQUEST, INQUIRY OR COMPLETION CARD (FOR OTHER THAN DLA ACTIVITIES)

1. PURPOSE

Immediately following a locator audit, a reconciliation of depot locator records and the DSC records must be accomplished. This appendix outlines the procedures to be used to generate necessary actions for the reconciliation of these records.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-83, Location Reconciliation Request, Inquiry or Completion Card, DICs ZC5, ZBY, and ZBZ

b. Appendix B-27, Locator Reconciliation Card, DIC CKA

c. Appendix B-28, Locator Reconcilization Exception Card, DICs CKB, CKC, and CKD

d. Appendix F-6, Locator Reconciliation Summary

e. Appendix F-124, Locator Reconciliation Exception Card Listing

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Physical Inventory Branch, Operations Control Office, Directorate of Storage and Transportation.

4. PROCEDURES/INSTRUCTIONS

a. Immediately following the completion of a locator audit, prepare computer input card in the format of appendix B-83 using DIC ZC5. This input will generate Locator Reconciliation Cards DIC CKA, appendix B-27, for each NSN in the locator file by Condition Code and type of pack. These cards are then forwarded to the applicable DSC.

b. The CKA cards are matched against the DSC's accountable records to determine whether or not those NSNs are recorded. Where a match is made, no other action takes place.

c. Where there is a difference between the accountable records and locator file, the following Locator Reconciliation Exceptions will be produced and forwarded from the DSC to the Directorate of Storage and Transportation:

(1) CKB for those items for which Locator Reconciliation Cards were received and the item has been reidentified to another stock number by a catalog change.

(2) CKC for those items for which Locator Reconciliation Cards were received and unit of issue does not correspond with DSC's record.

(3) CKD for those items for which Locator Reconciliation Cards were received and the NSN cannot be identified by DSC's records.

d. Upon receipt of the above exception cards at the depot, the computer will produce a Locator Reconciliation Exception Card Listing, appendix F-124. Further, CKC cards received will update the locator with the correct unit of issue.

e. The Locator Reconciliation Exception Card Listing will be used by Directorate of Storage and Transportation personnel to aid in correcting locator discrepancies and remarking of stocks. Use of the F-124 listing is covered in appendix E-028 P.

f. To obtain a Locator Reconciliation Summary, appendix F-6, a Locator Reconciliation Inquiry Card, appendix B-83, will be submitted using DIC ZBY. The F-6 will also be furnished upon submission of a Locator Reconciliation Completion Card, appendix B-83, using DIC ZBZ. This card will also close the CKA suspense file. Purpose and use of the F-6 listing is covered in appendix E-006 P.

APPENDIX E-083 V

LOCATION RECONCILIATION REQUEST, INQUIRY OR COMPLETION CARD VIOLATIONS (FOR OTHER THAN DLA ACTIVITIES)

1. INPUT DOCUMENT

Appendix B-83, Locator Reconciliation Request, Inquiry, or Completion Card, DIC ZC5, ZBY, or ZBZ

2. INPUTS TO PROCEDURE DECISION CHART

a. Appendix D-11

b. Appendix D-101

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

This appendix provides instructions for research, correction, and reentry of Locator Reconciliation Request, Inquiry, or Completion Cards which have been rejected from computer processing. The Physical Inventory Branch, DS/T, is responsible for the correction of errors and reentry of the card as required. Reasons for computer rejection are as follows:

VIOLATION REASON CODE	DEFINITION
HO	Invalid Commodity Manager Code.
AY	Invalid NSN/FSC.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE HO.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code HO indicates that data contained in pos. 6 of input document was other than a valid Commodity Manager Code as outlined in appendix A-44.

(2) PROCESSING/RESEARCH REQUIRED

(a) Review appendix F-85, Violation Printout to determine original entry in pos. 6 of input document.

(b) Review source coding sheet and/or audit schedule to determine commodity manager originally intended. Ensure that the code is valid as outlined in appendix A-44.

best copy available

b. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION

Violation Reason Code AY indicates that data contained in pos. 8-11 of input document contained characters other than numerics or was only partially filled with numerics.

(2) PROCESSING/RESEARCH REQUIRED

(a) Review appendix F-85, Violation Printout, to determine original entry in pos. 8-11 of input document.

(b) Review source coding sheet and/or audit schedule to determine the FSC originally intended.

5. REENTRY INSTRUCTIONS

a. When the correct entries have been determined, annotate corrections directly below the erroneous fields the Violation Printout, appendix F-85, using ink or colored pencil.

b. Forward the annotated printout through keypunch to the Data Processing Element for reentry into the applicable process.

APPENDIX E-084 P

RECEIPT FORECAST REQUEST CARDS

1. PURPOSE

This procedure describes the method for obtaining Receipt Forecast Reports.

2. APPENDICES USED IN THIS PROCESS

a. Appendix B-84, Receipt Forecast Request Card.

b. Appendix D-55, Receipt Forecast Request Card.

c. Appendix F-93, Receipt Forecast Report.

d. Appendix F-94, Bulk Receipt Forecast Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Any depot organizational element requiring the Receipt Forecast Reports may process the request cards in accordance with this procedure. However, elements of the Receiving and Storage Divisions will most frequently have a need for these reports.

4. PROCEDURE/INSTRUCTIONS

a. Submission of a Receipt Forecast Request Card will result in computer preparation of the F-93 (part 1 or part 2) or F-94 report which will be available for use the day after the card is processed. The F-93 report will be used primarily by Receiving Division. The F-94 report will be used primarily by Storage Division. Procedures for using the reports appear in appendix E-093 P.

b. The first action required in processing a Receipt Forecast Card is a determination of the type of report required. Four selection options are available for the F-93 report. One selection method is used for the F-94 report. All report data are obtained from the Prepositioned Materiel Receipt (PMR) File.

c. The F-93 report has two versions - Part 1 and Part 2. These parts differ only by the sequence in which they are produced. The various F-93 options are as follows:

(1) Part 1 (Sequence: PIIN within last two digits of PIIN).

(a) Option 1 - The first option for part 1 of the F-93 report allows selection of all PMR records established for a specific Estimated Delivery Date (EDD - year and month). Only DU_ (Procurement) records will be selected. This selection option provides a report with a major sequence that corresponds to

the sequence in which manual hard copy contract files are maintained in the Receipt Documentation Branch. Since there is a page break whenever the last two positions of the PIIN changes, the report can be broken out for distribution and review by the clerks maintaining specific segments of the contract file. Action Code RE is used for this option.

(b) Option 2 - The second option for part 1 of the F-93 report provides the same report and record selection as option 1, but allows restricting the report to a specific terminal digit or terminal digit range. This option allows a contract clerk to select only those records that correspond to his or her portion of the contract file. Action Code RF is used for this option.

(2) Part 2 (Sequence: PIIN and/or Document Number).

(a) Option 1 - The first option for part 2 of the F-93 report allows selection of all PMR records established for a specific EDD. If desired, the report may be limited to procurement or nonprocurement PMR records by entering the appropriate DIC (DU_ or DW_). If the DIC field is left blank all PMR records matching the EDD will be selected. Action Code RG will be used for this option.

(b) Option 2 - The second option for part 2 of the F-93 report allows selection of all PMR records for which the first four positions of the PIIN or Document Number match the entry on the request card. The resulting report, therefore, will reflect, for example, all procurement and PMR records for a specific DSC or all return PMR records for that level of Activity Address Number (see appendix N, Defense Acquisition Regulation for Activity Address Number assignment). If desired, the report may be limited to specific time period by entering the appropriate EDD. If the EDD field is left blank all PMR records matching the first four positions of PIIN/Document Number entered in the request card will be selected. Action Code RH will be used for this option.

d. The F-94 report differs in format from the F-93. The total cube is computed for each PMR record and is the basis for selecting the records for the report. The F-94 report will contain those PMR records matching the EDD entered in the input card if the total cube for the record is equal to or greater than the cube entry in the request card. If desired, the report can be limited to a specific type of receipt by entering DU_ (procurement) or DW_ (nonprocurement) in the DIC field of the request card. If the DIC field is left blank, all PMR records meeting the EDD and cube criteria will be selected. Action Code RJ will be used to obtain the F-94 report.

e. When the desired report has been determined, a coding sheet will be prepared in the format of appendix B-84. The request card will then be keypunched and forwarded to Data Systems for processing.

f. Document Identifier Code (ZUR), Functional Routing Code, and Action Code are mandatory entries in all request cards. Data entry requirements that vary by type of request are as follows:

(1) Action Code RE.

EDD - mandatory (no other entries required).

(2) Action Code RF.

(a) EDD - mandatory.

(b) Low Terminal Digit Parameter - mandatory.

(c) High Terminal Digit Parameter - mandatory.

(3) Action Code RG.

(a) EDD - mandatory.

(b) Document Identifier Parameter (DU or DW) - optional.

(4) Action Code RH.

(a) PIIN/Document Parameter (first four positions of PIIN/Document Number) - mandatory.

(b) EDD - optional.

(5) Action Code RJ.

(a) EDD - mandatory.

(b) Minimum Cube - mandatory.

(c) Document Identifier Parameter (DU or DW) - optional.

g. A maximum of 10 request cards of each type can be processed in a single day. Any cards in excess of 10 will be rejected. Violation correction procedures appear in appendix E-084 V.

APPENDIX E-084 V

RECEIPT FORECAST REQUEST CARD VIOLATIONS

1. INPUT DOCUMENTS

Appendix B-84, Receipt Forecast Request Card, DIC ZUR.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-55

3. PURPOSE, CONTENTS AND RESPONSIBILITIES

a. This appendix provides instructions to depot personnel for research, correction, and reentry of Receipt Forecast Request Cards (DIC ZUR) which have been rejected from computer processing.

b. Receipt Forecast Request Cards are prepared whenever depot personnel require a printout of the Receipt Forecast Report (appendix F-93) or the Bulk Receipt Forecast Report (appendix F-94). These reports are listings of selected Prepositioned Materiel Receipt (PMR) records to be produced upon submission of a request card on an as required basis.

c. With one exception, all violations will be content violations that can be identified and corrected solely by reference to the input. The exception would be the entry of more than 10 request cards containing the same Action Code in a single day. This violation will be identified by the in-the-clear message "INPUT EXCEEDS LIMIT."

d. Violation Reason Codes and definitions which apply are as follows:

VIOLATION REASON CODE	DEFINITION
AA	Document Identifier Code invalid.
AI	PIIN/DOCUMENT Number invalid (applies to first four positions used in the receipt source parameter as well as the low and high terminal digit parameters).
CF	Action Code invalid.
HP	Estimated Delivery Date invalid.
IP	Low Parameter exceeds High Parameter.
IY	Cube invalid.

4. PROCESSING/RESEARCH INSTRUCTIONS

Violations of Receipt Forecast Request Cards will appear on the Violation Reject Printout (appendix F-85) the day after the erroneous card is processed. Violations will be identified by the appropriate VRC and the erroneous data element(s) will be underlined with asterisks. The following correction procedures will be utilized:

a. VIOLATION REASON CODE AA.

(1) REASON FOR VIOLATION/ERROR CONDITION

Document Identifier Parameter is other than DU, DW or blank.

(2) PROCESSING/RESEARCH REQUIRED

Determine if a specific type of receipt is desired or not and reenter corrected card.

b. VIOLATION REASON CODE AI.

(1) REASON FOR VIOLATION/ERROR CONDITION

Action Code is RH and the PIIN/Document Number Parameter is other than alphanumeric or Action Code is RF and the Low Terminal Digit Parameter and/or the High Terminal Digit Parameter is other than numeric.

(2) PROCESSING/RESEARCH REQUIRED

Determine the erroneous data element by checking the field underlined with asterisks on the F-85 report. Correct the card as required and reenter.

c. VIOLATION REASON CODE CF.

(1) REASON FOR VIOLATION/ERROR CONDITION

Action Code entry is other than RE, FR, RG, RH, or RJ.

(2) PROCESSING/RESEARCH REQUIRED

Determine the Action Code required and reenter the corrected card.

d. VIOLATION REASON CODE HP.

(1) REASON FOR VIOLATION/ERROR CONDITION

Action Code is RE, RF, RG, or RJ, and EDD is other than numeric or is numeric but the last two positions are zeros or greater than 12; or Action Code is RH and the EDD entered is other than numeric or blank, or is numeric but the last two digits are zeros or greater than 12.

(2) PROCESSING/RESEARCH REQUIRED

Determine the correct EDD desired and reenter the corrected request card.

e. VIOLATION REASON CODE IP.

(1) REASON FOR VIOLATION/ERROR CONDITION

Action Code is RF and entry in Low Terminal Digit Parameter field exceeds the entry in the High Terminal Digit Parameter field.

(2) PROCESSING/RESEARCH REQUIRED

Determine the terminal digit range required and reenter the corrected card.

f. VIOLATION REASON CODE IY.

(1) REASON FOR VIOLATION/ERROR CONDITION

Action Code is RJ and Minimum Cube Parameter is other than numeric.

(2) PROCESSING/RESEARCH REQUIRED

Determine the minimum cube limit desired and reenter the corrected request card.

g. INPUT EXCEEDS LIMIT (Error Message).

REASON FOR VIOLATION/ERROR CONDITION

When this message appears on the F-85 report, it indicates that 10 Receipt Forecast Request Cards with the same Action Code entered in the rejected card have already been processed on that day.

5. REENTRY INSTRUCTIONS

When the correct input data have been determined, a new coding sheet will be prepared for keypunching and reprocessing in Data Systems.

APPENDIX E-085 P

DELINQUENT A/A DATA AND PKP A/R ACTIVITY

1. FORM/REPORT USED

Appendix F-143, Part 1, Delinquent Acceptance Alerts, or Part 2, PKP Acceptance Report Activity.

2. REASON/CRITERIA FOR PREPARATION

a. Once a month the mechanically maintained Acceptance Alert (A/A) File is screened for old delinquent A/As which have not been matched by a receipt action. These records are output in three age categories for review and corrective action, as required.

b. Daily, those Acceptance Reports (A/R) which have been prepared with no matching A/A will be output for investigation as to the nature or reason for nonavailability of A/A data.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Receipt Documentation Branch, Receiving Division, will review part 1 of the report each month to determine the reason for the failure to utilize the A/A data in a timely manner. The daily output of DIC PKP A/Rs may be used to assist in the investigation. Each receipt action which created a DIC PKP with a zero filled shipment number will be screened to ascertain whether or not the receipt document reflected the mandatory shipment number information.

4. PROCEDURES/INSTRUCTIONS FOR PROCESSING REPORT

a. Delinquent A/As, part 1, will be reviewed using the volume of the Delinquent A/As and the age category as guidelines. There will always be a certain amount of delinquent actions due to zero filled A/Rs (DIC PKP).

(1) Completed Receipt History should be inquired using the Delinquent A/A as source data. Whenever possible, inquiries will utilize the NSN and Procurement Instrument Identification Number (PIIN) to reduce inquiry (access) time.

(a) It should be understood that the completed receipt action (DIC ZV_/XZ_) is matched to the A/A data using PIIN, Supplementary PIIN, Contract Line Item Number (CLIN), Shipment Unit number and suffix. A match by PIIN/SPIIN and CLIN, but not shipment number, will result in the output of an appendix F-204 report, Shipment Number Research Required. Therefore, examination of delinquent records must include manual shipment number comparisons and screening F-204 report responses inquiring shipment number research.

(b) Completed Receipt History inquiries should also include an A/R inquiry. It may be more economical to use the batch inquiry method outlined in appendix B-61 as both responses can be generated by a single input DIC ZB1.

(2) Completed Receipt History/Acceptance Report responses should be screened for:

(a) Correctness of CLIN data.

(b) Presence of a zero filled shipment number in the receipt history.

(c) Appropriate Transaction Status Code and Preparation Date of the A/R. A delinquent A/A may be a followup action received after the original A/R was prepared. If the A/A followup reflects a Status Code 2 (or greater) an F-204, Manual Response Required, may still be outstanding.

(d) Suspension of the receipt in Condition L.

(3) Where appropriate, the Receipt History will be corrected if in error. Manual A/Rs will be prepared when necessary to reflect the new/corrected receipt status. Incorrect shipment numbers and shipment number suffix data can be corrected/added to the A/R history via preparation of appendix B-134, DIC ZKN/P, Manual Acceptance Report.

b. Daily output of A/Rs having no matching A/A should be examined on a daily basis. The reason for the preparation of the A/R DIC PKP was either:

(1) No A/A with a like PIIN/SPIIN or CLIN was available. In this instance, the automatic A/R process would cause a DIC PKP to be output IAW appendices D-69 and D-70.

(2) The shipment number in the receipt confirmation was zero filled.

c. If no A/A was available and the shipment number on the A/R was other than zero filled, no further action is required. However, if the shipment number was zero filled, receipt documentation should be re-examined to ensure that the shipment number was not available. Entry of zero fill in the shipment number field of the Receipt Confirmation will result in the automatic entry of a Shipment/Acceptance Discrepancy Explanation Code E in the DIC PKP A/R. The Code E specifically states to the DCSAR that documentation was deficient (the shipment number and/or suffix data was missing or incomplete, reference appendix A-74) but the receipt was accepted. Zero fill of shipment number should not be used in lieu of a vendor supplied number.

5. DISPOSITION OF FORM/REPORT

a. Part 1 should be retained until the reasons behind the Delinquent A/A data are resolved, then destroyed. Unresolved delinquencies will be repeated on the next report cycle except for those records in excess of 60 days past shipment date which will be deleted.

b. Part 2 may be retained until the investigations of the monthend Delinquent A/As, part 1, have been concluded.

c. Neither report (parts 1 or 2) should be maintained/filed beyond a reasonable period required to complete an investigation and resolve any discrepancies.

APPENDIX E-089 P

CONDUCTING LOCATION SURVEYS

1. PURPOSE

Describes the methods of conducting a location survey of materiel in storage by comparison with the Item Locator records; identifying warehousing deficiencies; and accomplishing surveillance inspection on nonshelf-life items.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-26

b. Appendix A-42

c. Appendix B-78

d. Appendix B-105

e. Appendix C-64

f. Appendix E-105 P

g. Appendix F-53

h. Appendix F-85

i. Appendix F-90

j. Appendix F-151

k. Appendix F-152

l. Appendix F-154

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

a. The Inventory Control Office is responsible for conducting location surveys in accordance with this procedure.

b. Warehousing Division is responsible for correcting warehousing deficiencies identified during the survey and assuring accuracy of the locator record.

c. Stock Readiness Branch will accomplish required inspections and PPPP&M functions identified as necessary by the Inventory Control Office during the survey.

4. PROCEDURES/INSTRUCTIONS

a. Initiating Survey.

(1) Establish schedules to assure that all locations are surveyed at least once annually.

(2) Determine location parameters of each survey and coordinate surveys and schedule with Warehousing Division.

(3) Prepare a location survey request for each parameter to request survey cards or listing to accomplish the survey.

(4) Receive the survey cards or listing in location sequence and the appendix F-90 for each lot to be surveyed.

(5) Establish controls to ensure completion of each survey lot within a 24-hour period.

(6) Issue location cards or listings to survey personnel to accomplish the actual survey.

b. Survey Process.

(1) Location survey cards or listing will be used to compare location information with computer record and to identify warehousing deficiencies and PPPP&M requirements, and to accomplish adds, deletes, and changes to locator record.

(2) Location information verified will consist of:

Location
Type Pack Code
NSN
Shelf-Life Code
Type Storage Code
Condition Code
Unit of Issue
Date of Pack/Expiration Date
Unit Pack
Discrepancy Code

(3) Complete appropriate blocks of B-78 format or F-152 listing to correct any differences.

(4) Note the following warehousing deficiencies on the B-78 card or F-152 listing:

(a) Bin Label Required - Management Code B.

(b) C-104 Stock Label Required - Management Code L.

(c) Warehouse Markings Required - Management Code F.

(d) Warehousing Conditions Need Attention - Management Code M.

(e) Unsafe Stacking - Management Code X.

(f) Open Containers in Bulk Area - Management Code Y.

(5) Annotate Discrepancy Code block of the B-78 card or the F-152 listing with a Discrepancy Code, reference appendix A-26, to record deficiencies identified in incoming, receipts or in locations as a result of location surveys which requires:

(a) Immediate C&P action to preserve condition of item (i.e., rust, corrosion, leakage, container damage, pest infestation, etc.).

(b) Testing and/or identification.

(c) Care and Preservation, Packaging, Packing and Marking.

(d) Inspection and Review by an inspector to resolve Shelf-Life/Condition Code/UI problem.

(6) Where materiel is in location and the item is not on a survey card or listing, complete information required on a survey card or add the listing data IAW appendix B-78 and Action Code FX. Do not prepare a DIC ZBH add action for locations flagged with a copy of the DLA Form 529. This form will act as a temporary label, reference appendix E-110 P. Therefore, the lack of a C-104 label in this instance should not be reported or recorded on a DIC ZBH as a location error.

(7) If materiel is not in location as shown on the survey card or listing, enter a delete action using data required by appendix B-78 and appropriate Action Code from appendix A-42. The DIC ZBH delete input may occasionally violate due to the fact that the location has been previously deleted by other than survey action. For example, a DIC ZBA deletion can be processed after the survey has been activated but prior to submission of the Location Survey Card, appendix B-78. In this instance, the DIC ZBH delete will violate and be counted as an error on the location survey analysis report, F-53, but will not be indicated as a deletion action on the F-151, location survey management action report, as the survey input document did not initiate the delete action.

(8) Where information on the survey card or listing differs from that on the materiel, annotate card or F-152 Listing with appropriate changes, Action Code FZ, and management or inspection coding, if required. Reenter on appendix B-78 <u>only</u> those data elements in error or requiring change action. <u>Do not reenter valid data elements</u>. The survey card may be reentered with a blank Action Code and a Management Code L in pos. 71 to produce an appendix C-104, Storage Location Identification Label (SLID). Entry of the Code L in pos. 71 together with other data requiring change under Action Code FZ will also produce a C-104 SLID.

NOTE: Reentry of the completed DIC ZBH, Location Survey Card, under Action Code FZ must contain mandatory data in pos. 1-29, 74-78, and 79-80. Data elements in pos. 30-61 must be left blank if not in error. Only those elements actually in error are to be reentered. Discrepancy or Management Code entries are not counted as errors.

(9) Process adds, changes, deletes, warehousing deficiencies, and PPPP&M actions to ODS for processing. Only prepare appendix B-78, Location Survey Cards, for those locations requiring action.

c. COMPLETING SURVEY

(1) Upon completion of all survey actions and correction of F-85, Violation Rejects, if any, prepare a card or Scan Sheet IAW appendices B-105 and E-105 P.

(2) Based on receipt of the B-105 input, ODS will process the input and prepare the following data:

(a) Appendix F-53, Location Survey Analysis Report.

(b) Appendix F-151, Location Survey Management Actions.

(c) Appendix F-154, Monthly Location Survey Statistical Analysis Report.

(d) Appendix F-154, Part III, upon completion of an Area Control Branch Cycle.

(e) Appendix F-85, Violation Reason List, when required.

(3) Inventory Control Office will process the F Appendices IAW the appropriate appendix.

APPENDIX E-090 P

MOVEMENT AND CONTROL OF DLA STOCK REQUIRING OPERATIONAL TESTING (EXCLUDING DIPEC)

1. PURPOSE

This procedure provides the method required to control the movement of DLA stocks from storage to point of test and its subsequent return to stock.

2. APPENDICES USED IN THIS PROCESS

a. Appendix C-71

b. Appendix E-071 P

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

a. Stock Readiness Branch.

b. Area Control Branches, Warehousing Division, Directorate of Storage and Transportation.

c. Repair and Overhaul Division, and Medical Equipment Repair Division, Directorate Medical Equipment Repair Division, Directorate of Industrial Plant Equipment Operations, except on DIPEC controlled equipment.

4. PROCEDURES/INSTRUCTIONS

a. Stock Readiness Branch will:

(1) Assure that Medical Equipment appearing in Appendix IV, DLA DPSCM 4155.30, will receive an operational test prior to issue.

(2) Assure that other commodity manager materiel is tested prior to issue for serviceability.

(3) Direct necessary quantities of equipment to be tested in advance of anticipated requirements to preclude failure to meet shipment deadlines while equipment is undergoing operational testing.

b. Medical Equipment Repair Division and Directorate of Industrial Plant Equipment Operations will conduct operational tests in accordance with the following procedures:

(1) Area Control Branches will:

(a) Assure all materiel selected for issue is tested in accordance with chapter 70 of this manual and is Ready for Issue (RFI).

(b) Notify Stock Readiness Branch when materiel being selected for issue requires Operational Test or Surveillance Inspection.

(2) Surveillance, Stock Readiness Branch, will:

(a) Determine the need to Operational Test a given NSN prior to issue.

(b) Select necessary quantities of each NSN requiring Operational Test, prior to issue, for testing in advance of anticipated requirements.

(c) Prepare workorder covering the necessary work to perform an Operational Test.

(d) Prepare a Stock Locator Change Document, DLA Form 536 (appendix C-71), in accordance with appendix E-071 P, pinpointing location to which materiel has moved.

(e) Arrange for movement of materiel with appropriate work order to testing facility.

(f) Establish Suspense File for each NSN undergoing Operation Test.

(g) Coordinate, with testing facility, all facets of the required test.

(h) Upon return of materiel:

1. Assure Stock Locator Change Document, DLA Form 536 (appendix C-71) has been completed and forwarded.

2. Materiel is properly located.

3. Clear each NSN from Suspense File.

APPENDIX E-091 P

CONTROL LISTING (DD FORM 1225)

1. PURPOSE

This procedure describes the method of assigning document numbers to manually prepared DD Forms 1225 and to Property Turn-In documents to correspond to computer assigned document numbers on automatically transceived adjustment actions which contain Management Code X or M in pos. 66 of the ZC0, Inspection Test Card. Management Code entry in DIC ZC9 cards is not required as all document numbers assigned to this activity will appear on the F-91 report.

2. APPENDICES USED IN THIS PROCESS:

a. Appendix B-116

b. Appendix C-54

c. Appendix F-91

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Quality Control Office, DS/T

4. PROCEDURES/INSTRUCTIONS

a. As established by appendix F-91, an automatic printout will be created by ODS IAW appendix D-39, of document numbers assigned to Materiel Adjustment Cards, DIC DAC, appendix B-22, transceived to DSC when Management Codes Z or M appear in pos. 66 of the ZC0, Inspection Test Card, upon reentry, or when DIC ZC9 Inspection Test Cards are reentered.

b. Management Code Z indicates that Condition Code change is to be supported by manually prepared mailed copies of DD Form 1225.

c. Management Code M indicates that Condition Code has been changed to H (for property disposal).

d. Quality Control Office will receive listing daily of document numbers assigned to the above transactions and take the following actions:

(1) Assign corresponding document number to the transceived adjustment to the manually prepared DD Forms 1225 required to be mailed in support of the automatic adjustments containing Management Code Z.

(2) Assign corresponding document number assigned to the transceived adjustment to Property Turn-In documents on adjustments containing Management Code M.

(3) Upon completion of above actions, the printout of adjustment document numbers will be disposed of under current records disposition procedures.

(4) Process manual DD Forms 1225 and Property Turn-In documents IAW applicable DSC requirements.

APPENDIX E-092 P

CUSTOMER COMPLAINT DATA ENTRY

1. PURPOSE

To provide guidance for the maintenance of Local Customer Complaint data, and the generation of Customer Complaint Investigation Results data (CD2) to the Customer/Depot Complaint System (CDCS).

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-2, Routing Identifier Codes.

b. Appendix A-3, Discrepancy Codes.

c. Appendix A-6, Type of Document Codes.

d. Appendix A-95, Customer Complaints Disposition Codes.

e. Appendix A-17, Mode of Shipment Codes.

f. Appendix A-44, Commodity Manager Codes.

g. Appendix A-57, Invalid/Valid Customer Complaint Codes.

h. Appendix A-96, Investigation Results Code.

i. Appendix B-9, Customer Complaint Data Entry.

j. Appendix E-006, Procedures for Investigating Customer Complaint.

k. Appendix E-163, Type B Remote Inquiry (General Locator).

l. Appendix F-19, Customer Complaint Listing.

m. Appendix F-150, Customer Complaint CDCS Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENTS

Directorate/Division of Quality, Quality Control Division/Branch.

4. PROCEDURES/INSTRUCTIONS

The process is initiated by entering the program call number $$UWTM01. If the number is entered successfully, the following program menu will appear:

```
UWTM01                    CUSTOMER COMPLAINTS

REQUEST C

    REQUEST:

      D = DEPOT CUSTOMER COMPLAINTS

      C = ICP CD1 CD2 CD3 INQUIRY AND UPDATES

      4 = ICP CD4 INQUIRY AND HISTORY UPDATE

      R = OPTIONAL REPORTS

PRESS SF1 KEY TO RETURN TO MENU
```

To request an ICP-FILE record enter a C in the REQUEST field. The next screen allows the entry of an Action Code I (inquiry) or U (update) and a nine position ICP Control Number in the Control Number field. If the entry is successful, the following display will appear:

```
 UWMT01          ICP CD1 CD2 CD3 INQUIRY AND UPDATES

REQUEST C   ACTION      ICP-CONTROL-NBR

CNTRL-NO-ICP  ICP-CD1-DTE   ICP-CD2-DTE  ICP-CD3-DTE

    DSPSN-CD
       AB
```

(1) Where:

(a) REQUEST C = ICP CD1 CD2 CD3 INQUIRY AND UPDATES. See paragraph 4 above.

(b) CNTRL-NO-ICP. The control number established by the Center receiving the complaint. The first position contains the Commodity Manager Code (appendix A-44), the next five positions are the year and Julian date the complaint is recorded, and the last three positions are serially sequenced. EXAMPLE: The 117th complaint received by DGSC on 22 June 84 would be G84174117. Not an updateable field.

(c) ICP-CD1-DTE. The date the most recent CD1 transmission for the record was received. Not an updateable field.

(d) ICP-CD2-DTE. The date the CD2 record is flagged for transmission to the Center. Not an updateable field.

(e) ICP-CD3-DTE. The date the CD3 transmission was received at the depot. Not an updateable field.

(f) DOC/SFFX-NBR. The document and suffix number against which a complaint has been filed. Not an updateable field.

(g) STOCK/PART/NBR. Stock or part number of the discrepant item. Not an updateable field.

(h) DEP-ACTN-CD. Depot Action Code. A single alpha character used by the Center to designate the action to be taken by the depot in response to the complaint. Not an updateable field. Codes are:

A = No depot action required. Information only.

B = Furnish shipping data.

C = Initiate tracer action.

D = Furnish supply documentation.

E = Offline instructions to follow.

F = Furnish asset availability.

(i) DOL-VAL-ROD. The total dollar value of the discrepant item. Not an updateable field.

(j) COMPL/SHIP-DTE. Complaint or ship date of discrepant item. Not an updateable field. Complaint date is two position year and two position month. The ship date is a one position year and three position Julian date.

(k) MODESHP. The mode of shipment of the discrepant item. Not an updateable field.

(l) RIFR. The Routing Identifier Code of the center generating the CD1 data. See appendix A-2. Not an updateable field.

(m) DISCR. Discrepancy Code. A two character alpha-numeric code summarizing the reason for the customer complaint. See appendix A-3. Not an updateable field.

(n) TP-DOC. Type of Document Code. This code defines the media by which the customer complaint was received. See appendix A-6. Not an updateable field.

(o) FOL-UP. Number of Follow-Up requests per specific complaint.

(p) GBL/TCN/CNTRACT-NBR. The Bill of Lading, Transportation Control Number or Contract Number by which the discrepant item was shipped. Not an updateable field.

(q) INVSTGTN-RSLT-CD. Investigation Results Code. Enter the code from appendix A-96 that best describes the results of the complaint investigation.

(r) MODESHP. Mode of Shipment. If the CD1 DEP-ACTN-CD is B, enter the mode the discrepant item moved under. Otherwise, leave blank. See appendix A-17 for mode code definitions.

(s) SHPD-DT. Shipped Date. If the CD1 DEP-ACTN-CD is B, enter the date the discrepant item was turned over to the carrier for movement. Otherwise, leave blank.

(t) CBL/GBL/UPS. Bill of Lading number. If the CD1 DEP-ACTN-CD is B, enter the commercial, Government or UPS Bill of Lading number the discrepant shipment moved under. Otherwise, leave blank.

(u) TCN. Transportation Control Number. If the CD1 DEP-ACTN-CD is B, enter the TCN the discrepant item moved under. Otherwise, leave blank.

(v) SCAC. If the CD1 DEP-ACTN-CD is B, enter the Standard Carrier Alpha Code (SCAC) number the discrepant item moved via. Otherwise, leave blank.

(w) PCS, WGT, CBE. Pieces, Weight, Cube. If the CD1 DEP-ACTN-CD is B, enter the number of pieces, weight and cube of the discrepant item. Otherwise, leave blank.

(x) TRANSCEIVE-ICP-CD2. Enter an X in this field when it is desired to transceive the CD2 data to the center. The CD2 will not transceive without this entry. When this field is updated successfully, the ICP-CD2-DTE field will be updated with the current date, and the record will no longer be accessable for update.

(y) DSPSN-CD. Disposition Code. A two position alpha-numeric code transceived from the ICP/DSC, summarizing the center's instruction for disposition of the discrepant item. See appendix A-95 for code definitions. Not an updateable field.

(2) The data headed ICP-CD1 and ICP-CD3 is created by the center. CD1 data is transceived to the depot to request investigation of a customer complaint. CD3 data is transceived to the depot to complete the CD1 record, and provide the depot with disposition instructions. The CD3 disposition generally results from the depot's CD2, but may be generated without CD2 input to cancel a CD1 transaction.

(3) Data headed ICP-CD2 is updated by the depot to notify the center of the results of the investigation conducted on the customer complaint.

b. To request a DEPOT CUSTOMER COMPLAINT, enter a D in the REQUEST field. The next screen will allow the entry of an Action Code A (add), I (inquire), C (change), or D (delete) and the 15-position Document/Suffix/Number. If the entry is successful, the following display will appear:

```
UWTM01                    DEPOT CUSTOMER COMPLAINTS

REQUEST D  ACTION   DOC-SUFX-NBR

   DOC-SUFX-NBR   DATE-ENTERED  DATE-LAST-CHG  REPORT-DATE  STATUS

PARCEL-POST  LOCATION  FUNCT-ROUTING  COMMODITY-MGR    DATE-1348  PERSON-CD
     P          A12         BF             S             4123      PC123

PRESS SF1 KEY TO RETURN TO MENU
```

(1) Where:

(a) REQUEST D = DEPOT CUSTOMER COMPLAINTS. See paragraph 4 above.

(b) DOC-SFFX-NBR. The document number and suffix number of the discrepant item. Not an updateable field.

(c) DATE ENTERED. Computer-assigned date the complaint record was first established. Not an updateable field.

(d) DATE-LAST-CHG. Date Last Changed. The computer-assigned date the complaint record was last updated. Not an updateable field.

(e) REPORT-DATE. This date is computer-assigned to indicate when the record appeared on a monthly depot report. Once the record is compiled into a monthly report it is no longer accessable for update. Not an updateable field.

(f) STATUS. Enter the appropriate Invalid/Valid code from appendix A-57. Entry of the code to this field will cause the record to be compiled into the next monthly depot report.

(g) STOCK-NBR. Stock Number. Enter the stock number documented as shipped.

(h) NIIN-IN-ERROR. Enter the actual NIIN of the item shipped. Update only when the NIIN shipped does not match the NIIN documented as shipped.

(i) CONTROL-NBR. Control Number. Enter the locally-assigned number used to control the hard-copy documentation supporting the complaint.

(j) DOLLAR-VALUE. Enter the total dollar value of the discrepant item.

(k) SENSITIVE. Enter the appropriate physical security code for the discrepant item. Physical security code is found in the item's locator record, appendix E-163 P. See appendix A-28 for code definitions.

(l) DISCREPANCY. Enter the appropriate discrepancy code from appendix A-3 that most accurately describes the nature of the discrepancy. Mandatory entry.

(m) TYPE-DOC. Enter the type document code from appendix A-6, that describes the media by which the complaint was received. Mandatory entry.

(n) AVAILABILITY. Enter a Y (yes) or an N (no) to indicate the availability of supporting DD Form 1348-1 documentation.

(o) DOMES-DESIG. Domestic Designator. If the facility the discrepant item was shipped to is within CONUS, identify the customer by the appropriate Military Service/Federal Agency, appendix A-5.

(p) OV-SEA-DESIG. Overseas Designator. If the facility the discrepant item was shipped to is outside CONUS, identify the customer by the appropriate Military Service/Federal Agency, appendix A-5.

(q) HAZ-MATERIAL. Hazardous Material. Enter a Y (yes) if the discrepant item is known to be hazardous; an N (no) if the item is known to be non-hazardous; or leave blank if the hazardous characteristics of the item are unknown.

(r) PARCEL-POST. Enter a P if the discrepant item was shipped parcel post. Otherwise, leave blank.

(s) LOCATION. Enter the first three digits of the location from which the discrepant item was picked, if known. Otherwise, enter NLO, signifying the originating location is unknown.

(t) FUNCT-ROUTING. Enter the functional routing code of the action organizational element or individual making the request, if an MRO history of the discrepant item is desire. Otherwise, leave blank.

(u) COMMODITY-MGR. Commodity Manager. Enter the commodity manager code of the discrepant item. See appendix A-44 for codes and definitions. This is a mandatory entry.

(v) DATE-1348. Date of DD Form 1348-1. Enter the document date from block 0 of the DD Form 1348-1, when available.

(w) PERSON-CD. Personnel Code. Enter the personnel code of the individual responsible for the discrepancy.

(2) The data in this display is created and maintained by the local depot, and will remain accessable to update until a date is posted in the REPORT-DATE field by the computer, indicating the data has been compiled into the monthly depot report statistics.

c. Inquiry and delete transactions for the ICP-FILE and DEPOT-FILE options will generate the specified record with a blank request line (REQUEST, ACTION, DOC-SFFX-NBR/CONTROL-NBR fields) arrayed across the top of the display for entry of the next transaction request, as shown in the examples above. Add and change displays will generate the specified record for update, and the blank request line will appear in response to successful completion of the update.

d. To request an ICP CD4 Inquiry and History Update, enter a 4 in the REQUEST field. Updates to the CD4 record only includes inquiries against a specific record or entry of a HISTORY flag when disposition is received. SF 364 Records with 1H (information only) action code will automatically be moved to history. The term FINAL will appear in the interim reply field when final disposition is received. The following display will appear:

```
UWTM01                    IPC CD4 INQUIRY AND HISTORY UPDATE

REQUEST 4          ENTER CONTROL NUMBER      _ _____ __      ENTER HISTORY FLAG _

PRESS ENTER TO CONTINUE THE INQUIRY         PRESS SF1 KEY TO RETURN TO MENU
```

(1) Where:

(a) Request 4 = ICP CD4 INQUIRY AND HISTORY UPDATE. See paragraph 4 above.

(b) NSN/PART-NBR. Stock or part number of the reported discrepancy.

(c) UI. Unit of Issue.

(d) DOCUMENT/SFX-NBR. The document and/or suffix number of the reported discrepancy.

(e) CLIN. Contract Line Item Number.

(f) DOL-VAL. Dollar Value - total dollar value of the reported discrepancy.

(g) REPORT FLAG. The flag code (yes or blank) used to indicate that a final record has been moved to History.

(h) COND CODE. The Condition Code.

(i) DISCR CODE. The Discrepancy Code - applicable to the nature of the discrepancy.

(j) INTRM REPLY. Interim Reply Code - cites a reason for extending a complaint suspense date.

(k) CALL/ORD NUMBER. Call Order Number.

(l) CD4 DTE. CD4 Date - date the CD4 date was received.

(m) SSPNS DTE. Suspense Date - due date the Center assigns for response to the discrepancy.

(n) HISTORY DATE. Date completed record was moved to History.

(o) DISP CODE. Disposition Code.

(p) PTL IND. Partial Indicator - partial (P) or final (F) code which defines activity against part or all of the reported discrepancy.

(q) QTY. Quantity.

(2) The data in this display is created by the ICP by mechanized receipt of the DIC CD4 and is not updateable by the local depot. It remains in active status until the CD4 is received with disposition for the total quantity, then it is moved to History by entering a Y in the HISTORY FLAG field. The record will be inquireable up to one year after it is moved to History.

e. To request the Report Request format, enter an R in the REQUEST field and depress ENTER. If successful the following display will appear:

```
UWTMO1                    OPTIONAL REPORTS

REQUEST R

DEPOT REPORT OPTION     ICP REPORT OPTION     CD4 TRANSACTION LISTING Y
                                              CD4 ACTIVE LISTING Y
                                              CD4 HISTORY LISTING Y
                                              CD4 LISTING IN NSN SEQ

DEPOT REPORT OPTION:    ICP REPORT OPTION:
    1 = PRE-MONTHLY         1 = CROSS-REFERENCE
    2 = MONTHLY             2 = ICP LISTING BY DOCUMENT SEQ
    3 = YEARLY              3 = ICP LISTING BY ICP-CONTROL-NUMBER SEQ

     LAST MONTH REPORT          NEXT MONTH REPORT
          SEP                        OCT
```

(1) This display is provided to allow the user to request one of the nine optional reports, listed in the display with adjacent numeric codes 1, 2 or 3. For CD4 listings enter a Y at the end of each listing as indicated above. If the CD4 reports are desired in NSN sequence, enter a Y adjacent to CD4 listing in NSN SEQ. See paragraph 5 below for first time ever request of depot records.

(2) To request a depot report, enter the numeric code of the report desired in the field where the cursor is positioned, of the DEPOT REPORT OPTION field. To request an ICP report, move the cursor to the field titled ICP REPORT OPTION and enter the desired report's numeric code. Move the cursor to the field at the end of each CD4 listing and enter a Y for the desired listing.

(3) If no numeric code is entered in one of the two report request fields, the process will automatically generate a premonthly depot report.

(4) The two fields at the bottom of the display titled LAST MONTH REPORT and THIS MONTH REPORT will indicate the last month a monthly depot report was run, and the next month a monthly depot report is due.

(5) Successful completion of this report request will cause the report to be generated with the next scheduled customer complaint batch processing run. Frequency of these runs is controlled by the local depot and so may vary from depot to depot. Check with your data systems manager to determine when the next run is scheduled, and by that when to expect your reports.

(6) See appendices F-19 and F-150 for more information on Depot and ICP reports.

f. A one time screen format appears the first time request R (optional reports) is requested. This screen format provides for the entry of the first month depot customer complaint data is entered to the system. Enter an X in the field preceding the month desired, to indicate the month the first customer complaint data is entered in to the system.

```

PRESS SF1 KEY TO RETURN TO MENU
```

g. To return to the program menu from any of the above displays depress the SF1 key.

5. ERROR MESSAGES/ACTIONS

ERROR MESSAGE	CAUSE/ACTION
UWTM01-01 INVALID ACTION	Probable Cause: An invalid action code has been entered as part of the format request. Action: Valid action codes to be used with an ICP-FILE request are I (inquire) and U (change or update CD2). Valid action codes to be used with a DEPOT-FILE request are A (add), I (inquire), C (change) and D (delete). Enter the correct action code and retry entry.
UWTM01-02 MUST BE (M), (S), (D), (T), (G), (I), (C), (E), (O)	Probable Cause: An invalid commodity manager code has been entered in a DEPOT-FILE record. Action: Enter one of the codes in the message and retry entry. For definition of commodity manager codes see appendix A-44.

ERROR MESSAGE	CAUSE/ACTION
UWTM01-03 INVALID DISCREPANCY	Probable Cause: An invalid discrepancy code has been entered in a DEPOT-FILE record. Action: Review discrepancy codes listed in appendix A-3, and enter a valid code to continue processing.
UWTM01-04 DOCUMENT NOT FOUND	Probable Cause: The document number entered in an ICP-FILE request is not on record. Action: Review documentation or consult supervisor to determine corrective action.
UWTM01-05 MUST BE (0), (1), (2), (3), (4), (5), (6), (7), (8), (9), (A), (B), (C), (D), (E), (F), (G)	Probable Cause: The type document code entered in a DEPOT-FILE record is not one of the codes listed in the message. Action: For successful entry, enter one of the codes listed in the message. To determine the appropriate code, review code definitions in appendix A-6.
UWTM01-06 MUST BE (Y) OR (N) OR ( )	Probable Cause: The availability code entered is other than the codes listed in the message. Action: Enter a Y to indicate that a DD Form 1348-1 is available to support complaint processing, or an N to indicate that no DD Form 1348-1 is available.
UWTM01-07 ALREADY ON FILE	Probable Cause: An attempt was made to add a DEPOT-FILE record that is already on file. Action: The record is already on file and is accessable for inquiry, or possibly change, if desired.
UWTM01-08 INVALID STATUS	Probable Cause: The code entered in the STATUS field of a DEPOT-FILE record is not a valid code. Action: See appendix A-57 to determine which Invalid/Valid complaint code is appropriate for the record. If the validity of the complaint has not been established yet, leave the field blank.
UWTM01-09 UPDATE NOT ALLOWED ALREADY PROCESSED	Probable Cause: An attempt was made to change or add CD2 data to an ICP-FILE record with CD3 data completed; or to change a DEPOT-FILE record with a date in the report date field. Action: In both instances, the subject record is closed to further update, but the record may still be inquired to resolve the problem.

ERROR MESSAGE	CAUSE/ACTION
UWTM01-10 MUST BE 1 OR 2 OR 3	Probable Cause: The operator depressed the ENTER key in the report request display without specifying depot or ICP Report option 1, 2 or 3. Action: The depot premonthly report will be generated by this entry. If it was intended to request a report other than the depot premonthly, it will be necessary to retry the entry, with the appropriate depot or ICP report option specified.
UWTM01-11 MUST BE (Y) OR (N) OR ( )	Probable Cause: The operator has attempted to update a DEPOT-FILE hazardous material field with a code other than those shown in the display. Action: To indicate the material is hazardous enter a Y, to indicate material is non-hazardous enter an N, or if the hazardous characteristic of the material is unknown leave blank.
UWTM01-12 MUST BE A, B, C, D, E, F, G, H, J, K, L, Z, X	Probable Cause: The operator attempted to update an ICP-FILE CD2 record with an invalid investigation results code. Action: Retry entry with one of the investigation results codes listed in the message. For definition of the above codes, see appendix A-96.
UWTM01-13 DELETE NOT ALLOWED ALREADY PROCESSED	Probable Cause: The operator attempted to delete a DEPOT-FILE record that has previously been completed. Action: Review documetation or consult supervisor to determine corrective action.
UWTM01-14 MUST BE (P) OR ( )	Probable Cause: The operator attempted to update the DEPOT-FILE parcel post field with something other than P or blank. Action: Retry entry by updating the field with P, to indicate parcel post shipment, or blank to indicate other than parcel post shipment.
UWTM01-15 UPDATE SUCCESSFUL	Probable Cause: This message appears only in conjunction with the report request format and indicates the report request entry was successful. No further action required.

ERROR MESSAGE	CAUSE/ACTION
UWTM01-16 SELECT ONE OF THE 12 MONTHS	Probable Cause: The operator attempted to request a report without updating the data required for the first time request Code R update Action: See paragraph 4 for instruction on first time depot report request procedures.
UWTM01-17 CONTROL NUMBER NOT FOUND	Probable Cause: The control number entered in an ICP-FILE request is not on record. Action: Review documentation or consult supervisor to determine corrective action.
UWTM01-18 CANNOT BE BLANKS	Probable Cause: An attempt was made to add a record with no data in the DOC-SFFX-NBR/ICP-CONTROL-NBR field. Action: Retry entry with the appropriate DOC-SFFX-NBR/ICP-CONTROL-NBR data.
UWTM01-19 NOT BEGINNING OF NEW MONTH	Probable Cause: An attempt was made to request a monthly report during the same month as the NEXT MONTH REPORT period noted in the report request display. Action: Retry the request the month following the NEXT MONTH REPORT period noted in the display.
UWTM01-20 NO MRO QTY ENTER	Probable Cause: An attempt was made to request a monthly report prior to the final F-9 Report mechanized run for the report period. Action: Retry report request when the final F-9 Report for the report period has been processed.
UWTM01-90 BAD RETURN FROM (XXXXXX)	Probable Cause: A program error has occurred. Action: Contact the data systems manager for instructions.

APPENDIX E-093 P

RECEIPT FORECAST REPORTS

1. FORM/REPORT USED

a. Appendix F-93, Receipt Forecast Report

b. Appendix F-94, Bulk Receipt Forecast Report

2. REASON/CRITERIA FOR PREPARATION

Appendices F-93 and F-94 reports are produced as a result of processing a Receipt Forecast Request Card, appendix B-84, DIC ZUR.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Any depot element requiring Receipt Forecast Reports is responsible for processing Receipt Forecast Request Cards IAW appendix E-084 P and utilizing the resulting reports IAW this procedure.

4. PROCEDURES/INSTRUCTIONS

a. Sources of Information.

All data appearing on appendices F-93 and F-94, Receipt Forecast Reports, will be obtained from the Prepositioned Materiel Receipt (PMR) File. The unit cube will be obtained from the Stock Locator File as each PMR record is added to the PMR File. If the unit cube is not available when a PMR record is initially added, the Stock Locator File will be checked prior to generation of the F-94 report to determine if the cube data has been added since the PMR record was first received.

b. Preparation of Form/Report.

Receipt Forecast Request Cards will be processed on the day they are submitted. The resulting reports will be available the following day.

c. Distribution of Form/Report.

One copy of the report will be provided to the originator of the Receipt Forecast Request Card.

5. PROCEDURES/INSTRUCTIONS FOR UTILIZATION OF THE REPORTS

a. Appendices F-93 and F-94 reports provides listings of records from the PMR File which provides the only available means of forecasting the number of receipts which can be expected in future time periods. The value of reports, therefore, is directly dependent upon the accuracy and completeness of Prepositioned Materiel Receipt Cards (PMRC) provided by the DSCs.

b. Appendix F-93 report is available in two parts with two selection options for each part. The two parts differ only by the sequence in which the data are listed. There are two selection options for the appendix F-94 report. The various possibilities are as follows:

(1) Appendix F-93, part 1: Sequence - PIIN (minor) within last two digits of PIIN (major), with page break on last two digits of PIIN.

(a) Option 1 - Allows selection of all procurement PMR records (DIC DU_) for a specific EDD.

(b) Option 2 - Allows selection of all procurement PMR records for a specific EDD and specific terminal digit range.

(2) Appendix F-93, part 2: Sequence is PIIN and/or document number.

(a) Option 1 - Allows selection of all PMR records for a specific EDD and, if desired, type of receipt (procurement or other than procurement).

(b) Option 2 - Allows selection of all PMR records for a specific source (first four positions of PIIN or document number) and, if desired, a specific EDD.

(3) Appendix F-94: Sequence is PIIN/document number (minor) within NSN (major).

(a) Option 1 - Allows selection of all PMR records for a specific EDD which exceed a desired minimum cube limitation.

(b) Option 2 - Allows selection of procurement or nonprocurement PMR records for a specific EDD which exceed a desired minimum cube limitation.

c. Appendices F-93 and F-94 are optional reports to be requested only when necessary. Some probable applications are as follows:

(1) Purge the entire active contract files. Request appendix F-93, part 1, immediately prior to the monthly purge of the PMR File. Use option 1 and the EDD of the previous month. The report will then reflect all PMR records which are to be removed from the file because they are open 60 days beyond the EDD. If a corresponding PMR record matches a contract, remove the contract from the active file. If no corresponding PMR record is printed for the contract, process a PMR File Inquiry and a Completed Receipt File Inquiry for the PIIN IAW appendix E-061 P. If the Completed Receipt File Inquiry response indicates the materiel has been received but not recorded on the contract, annotate the contract and remove from the active file. If the PMR Inquiry response indicates the EDD has been changed, update the EDD on the contract and retain in the active file. If no PMR exists for the contract, remove it from the active file.

(2) Purge a portion of the active contract file. Request appendix F-93, part 1, immediately prior to the PMR File purge. Use option 2, the EDD of the previous month and the terminal digit range for the portion of the file desired. Use the same analysis procedure described in subparagraph c(1) above.

(3) Determine total anticipated receipt workload for a future period. Request appendix F-93, part 2, using option 1 for the EDD desired. If the report is to be limited to a specific type of receipt (procurement or nonprocurement), use the applicable Document Identifier Parameter (DU or DW). Review the report to determine the number of receipt lines to be received for the period. This amount, adjusted by an experience factor on the percent of receipts which can be expected to be received without a PMR record, will provide a reasonable estimate of the workload for the period. Comparing the amount with previous workload data will indicate if additional resources will be required or if excess resources can be diverted to other tasks. Limiting the report to nonprocurement receipts will indicate if an excessive number of customer returns in a future period will require additional inspectors or possibly an increased repacking or remarking effort.

(4) Determine the total anticipated receipt workload associated with a specific source. Request appendix F-93, part 2, using option 2 for the specific source desired. If the report is to be limited to a specific period, use the applicable EDD. The resulting report can be used to forecast the number of receipts that can be expected for a given return project, e.g., a base closure. The report can then be used to identify additional resource requirements, if necessary.

(5) Determine anticipated bulk receipt workload for a future period. Request appendix F-94 report using option 1 for the minimum cube limit desired to identify bulk receipts. The resulting report can be used as a basis for storage planning when space utilization is high. An excessive amount of anticipated bulk receipts can also be a basis for diverting or obtaining additional resources for offloading materiel in the bulk areas.

(6) Determine the anticipated bulk receipt workload for a specific type of receipt for a future period. Request appendix F-94 report using option 2 for the minimum cube limit and the specific type of receipt. When notification of a returns program is received and a large number of bulk receipts are expected, the report may be limited to nonprocurement receipts allowing closer management of depot resources required to handle the increase.

d. These methods of using the Receipt Forecast Reports are examples of possible uses. They are not mandatory, nor are they restrictive. The reports should be requested for whatever purpose they are considered to be useful in depot management.

6. DISPOSITION OF THE FORM/REPORT

Destroy when no longer required.

APPENDIX E-094 P

MANUAL PREPARATION OF ACCEPTANCE REPORTS

1. PURPOSE

a. This procedure will furnish guidance in the preparation of an Acceptance Report (A/R) when the following conditions preclude automatic A/R production.

(1) Cancellation or correction to a previously transmitted A/R is required.

(2) The Purchase Unit (P/U) on the Contract Data record does not match the Unit of Issue (U/I) of the receipt, and a conversion factor is not available to adjust the receipt U/I quantity by mechanical means or the Quantity Variance Code is not available to determine an acceptable Hi-Lo quantity range.

(3) A procurement receipt, previously documented on an interim A/R, using an appropiate Shipment Acceptance Discrepancy Explanation (appendix A-74), is now being reclassified. These items represent receipts held in Condition Code L, which are being returned to issuable status (Condition Code A), per instructions from applicable authority; i.e., item manager of DSC.

(4) An Acceptance Report is requested, but the Receipt History Record has been deleted or purged.

(5) The Contract Administration Office has submitted an Acceptance Followup with a Transaction Status Code greater than 1.

(6) An attempt has been made to match an Acceptance Alert record to a Receipt Confirmation or Completed Receipt record. A match was made on the PIIN, CLIN and SPIIN (as applicable) but no match was made on the shipment number and shipment number Suffix Code.

(7) An Acceptance Alert/Followup for a receipt (identified on the hard copy of the Procurement Instrument/Contract as a transshipment item) was received and matched against Receipt and Acceptance Report History as well as the due-in or Prepositioned Materiel Receipt Card (PMRC) File. No matching record was identified in either instance. The action was mechanically identified as a possible transshipment requiring manual research and reporting. This identification is an assumption based upon both a missing PMRC and receipt history. Transshipment processing does not include DIC D4_ preparation.

(8) A Receipt Confirmation has been coded to produce an Acceptance Report but the Administering Location Code reflected in the DIC ZV_/ZX_ did not match Conversion Table Codes contained in appendices D-69 and D-70 and documented in DoD 4105.59-H.

b. Acceptance Reports (DIC PKN/PKP) will normally be mechanically prepared at the time the Materiel Receipt Card (MRC) is produced. The Acceptance Alert (A/A) File will be screened during the receipt process to determine if an A/R is required; if no A/A is available the Receipt Confirmation, DIC ZV_/ZX_, will be examined for evidence of Acceptance Reporting requirements (A/R). DIC PKP, automatically produced, may reflect one or more zero filled fields (Shipment Number, Purchase Unit and Quantity Shipped) usually associated with more significant data. These A/Rs are produced via the receipt confirmation process when a need for an A/R is recognized but when no matching A/A or, in some instances, DD Form 250/1155 is available to augment the normal automated A/R process.

2. APPENDICES USED IN THIS PROCESS

a. Appendix A-1, MILSCAP Format Identifier Codes.

b. Appendix A-74, MILSCAP Dicrepancy Reason Codes.

c. Appendix A-73, MILSCAP Transaction Status Indicator Codes.

d. Appendix A-76, MILSCAP Dating Techniques.

e. Appendix B-134, MILSCAP Acceptance Report (A/R) Card Format.

f. Appendix D-178, Processing Acceptance Alerts.

g. Appendix D-179, Processing Manually Prepared Acceptance Reports.

h. Appendix F-204, Acceptance Action Inquiry Report.

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Receiving Division, Document Control Branch will prepare the manual Acceptance Reports as required.

4. PROCEDURES/INSTRUCTIONS

a. As required, the Acceptance Action Inquiry Report, appendix F-204 will be mechanically prepared and forwarded to Receiving Division. This report reflects receipt records, together with available Receipt History, and Contract Data information, for which automatic A/R action cannot be accomplished. Manual action must be performed to prepare the applicable A/R IAW appendix B-134. The F-204 will display the necessary coding form to facilitate preparation and entry of the A/R.

(1) The receipt of a DIC PK5, A/A requesting a correction of previously transmitted data (A/A) contains a Transaction Status Indicator "E", which will perpetuate an image of the Acceptance Followup, DIC PK5 to appear on the F-204 report. This data will be accompanied by matching information from Completed Receipt and Contract Data History. All available research information will be displayed on the report to assist in preparing the corrected A/R response per appendix B-134. The corrected A/R will contain Transaction Status Code C in pos. 80.

(2) Corrective action may require submission of an A/R cancellation. This can be accomplished by preparing a duplicate of the A/R to be canceled, with an X overpunch in the decade position of the year in the PIIN Number (tenth position of a 13-position field). The data in the F-204, Acceptance Data Action Report may not provide full information necessary to prepare the proper correction. Further inquiries into the Contract Data may be necessary to resolve the problem. Inquiry procedure, appendix B-68 is provided to assist an operator in obtaining further information related to Contract Data.

(3) When the Contract Data File does not contain a conversion factor and the purchase Unit differs from the receipt Unit of Issue, it will be necessary to prepare a manual A/R.

(a) The Acceptance Action Inquiry Report will be produced. The report will contain all available related information from Receipts History and Contract Data.

(b) A document clerk will review the report for completeness and obtain the missing conversion factor from:

1. The Catalog Management Data Notification (CMDN).

2. The item manager/DSC.

(c) Divide the receipt quantity by the conversion factor and enter this quantity in the "QTY Accepted" block of the A/R input.

(4) Upon receipt of disposition instructions from the item manager, reclassifying receipts suspended in Condition Code L to Condition A, it will be necessary to manually prepare the final A/R. The following actions will be taken:

(a) Extract the copy of the F-204 report suspended with the depot copy of the discrepancy report, SF 364. Reference appendix F-204, paragraph 7h.

(b) Annotate on the coding form portion of the F-204, the quantity to be accepted and the quantity originally documented as shipped. Annotate the MRC and RCC dates together with the related TP Control Number of the A/R coding format.

(c) Review the manually-prepared A/R for completeness IAW appendix B-134.

(d) Prepare a DIC CC1 delete Action Code 4 IAW appendix B-031 to remove the Contract Data Record and transfer to history.

(5) An A/R may be requested by card (A/A input) or via telephone request after the Receipt History Record has been purged due to its (receipt record) age. In this instance, estimated MRC and/or RCC dates may be furnished, and the TP control number will be zero filled. A/Rs constructed in this fashion must have a DIC equal to ZKN or ZKP.

(6) Acceptance Followups with Transaction Status Codes greater than 1 and with no matching Completed Receipts File record will require manually prepared Acceptance Reports, reference Transshipment Receipts Exceptions covered by subparagraph 4a(9) below. The following procedure will be followed:

(a) Inquire the Completed Receipts File. Use DIC ZB1 or an E inquiry. Inquire by PIIN or NIIN. If a Completed Receipts File record is found, prepare an Acceptance Report with Transaction Status Code A.

(b) If no Completed Receipts File record is found, inquire the Suspended Receipts File.

1. If NIIN is available, inquire by N inquiry or ZZQ.

2. If NIIN is not available, determine the NIIN by inquiring the Contract Data File using DIC ZB0 or C inquiry. Then inquire the Suspended Receipts File using the DIC ZZQ or N inquiry.

(c) If a Suspended Receipts File record is found, no manually prepared Acceptance Report is required. A mechanically prepared report will be generated when the receipt is confirmed.

(d) If a Suspended Receipts File record is not found, or if no NIIN is available, prepare a ZKN with X is pos. 66 with Discrepancy Reason Code U and with Transaction Status Code D.

(7) Receipt Confirmation Cards will be matched to Acceptance Alerts and Acceptance Followups will be matched to Completed Receipt records. The match will be by PIIN, SPIIN, CLIN, Shipment Number and Shipment Number Suffix Code. If the PIIN, SPIIN and CLIN match, but the Shipment Number and Shipment Suffix Code do not match, the Acceptance Alert or Acceptance Followup will be output on the F-204 for manual review. The following procedure will be used:

(a) Attempt to verify the Shipment Number and/or Shipment Number Suffix Code from the DD Form 250, 1155, etc.

(b) If the Shipment Number and/or Shipment Number Suffix Code can be determined, prepare an appropriate ZKN.

(c) If the Shipment Number and/or Shipment Number Suffix Code cannot be determined, do not prepare a ZKN.

(8) An Acceptance Alert or Acceptance Followup with a Transaction Status Code of 1 will compare the Purchase Unit against the Unit of Issue. If there is no match, the Quantity Shipped will be compared to the Hi-Lo range established by the Quantity Variance Code. If the Quantity Variance Code is not available, a manual A/R must be prepared.

(a) Attempt to determine the Quantity Variance Code from available information.

(b) If determined, establish whether the Quantity Shipped in the A/A is within the allowable variance. If allowable, enter the Quantity Shipped from the A/A into the Quantity Accepted field of the A/R. If the Quantity Shipped is not within the allowable variance, divide the Quantity Shipped by the Conversion Factor and enter the converted total into the Quantity Accepted field of the A/A. See subparagraph (3) above, if the Conversion Factor is not available.

(c) If the Quantity Variance Code is not found, obtain the information from the item manager/DSC.

(9) When an A/A or an A/A Followup is received and a matching Completed Receipt History is not found, a further match is made with the due-in or PMRC File. If a PMRC match (PIIN, SPIIN, CLIN) is not obtained, the receipt is identified as a Possible Transshipment on the F-204, Acceptance Action Report. Resolution of this problem will require manual research and reporting as follows:

(a) If no PMRC or Automated Contract Data is available for transshipment receipts, it will be necessary to obtain the Procurement Instrument or Contract. Contact the appropriate DSC if the contract is not locally obtainable.

(b) Screen the contract for evidence of transshipment. If the line under investigation is a transshipment item, prepare a manual A/R to document receipt status, delivered or undelivered IAW appendix B-134.

(c) If the line is not a transshipment item, annotate the F-204 to this effect and continue processing a manual A/R IAW paragraph 4a(5) or (6) of this procedure. The instruction to manually prepare an A/R response is still a requirement even if the receipt is not a transshipment item. The A/A still requires a response.

(10) When the Administering Location Code contained in the receipt confirmation is not 001 through 172, does not match the conversion table codes reflected in appendix D-69, or is not documented in DoD 4105.59-H as a Contract Administration Service Code for DoD CAS components, no DoDAAD can be automatically computed and the automatic A/R DIC PKP is frustrated.

(a) Review the RCD for correct Administering Location Code entry. If Administering Location Code is not transposed, review contract data via Type C Inquiry IAW appendix B-68. Review hard copy of contract and identify from either source the correct code.

(b) Prepare a manual A/R, as required, obtaining the proper ADP point from DoD 4105.59-H and additional data from receiving documentation or receipt history, as appropriate.

b. Completed and properly annotated Acceptance Reports, DIC ZKN/P, will be forwarded to the appropriate document input station for entry.

APPENDIX E-094 V

ACCEPTANCE ALERT OR ACCEPTANCE REPORT VIOLATIONS

1. PURPOSE

This appendix provides instructions for correction and reentry of Acceptance Alert/Followup cards (A/A) or Acceptance Report (A/R) cards that have been rejected from the computer.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-178 and D-179

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

Receiving Division, Receipt Documentation Branch will be responsible for investigation, correction and reentry of the A/A or A/R as required. Reasons for invalid A/A or A/R inputs are as follows:

a. Acceptance Alert/Followup, DIC PK5 Violations.

VIOLATION REASON CODE	DEFINITION
AI	Invalid Procurement Instrument Identification Number (PIIN).
AN	Invalid Purchase Unit.
AS	Invalid Quantity.
EX	Invalid Supplementary PIIN/Call/Order Number.
IU	Invalid Shipment Number.
JI	Invalid CLIN.
RZ	Invalid Consignee Code.
TU	Invalid Transaction Status.

b. Acceptance Report, DIC PKN/PKP Violations.

VIOLATION REASON CODE	DEFINITION
AA	Invalid Document Identifier Code.
AI	Invalid PIIN.
AN	Invalid Purchase Unit.
AS	Invalid Quantity.
D9	Invalid TP Control Number.
EX	Invalid Supplementary PIIN/Call/Order Number.
HP	Invalid Date.
IU	Invalid Shipment Number.
JI	Invalid CLIN.
RZ	Invalid Consignee Code.
TU	Invalid Transaction Status.
8V	Invalid Discrepancy Code.

4. PROCESSING

Violations of Acceptance Alert (A/A) or Acceptance Report (A/R) cards will appear on the Violation Reject Printout, appendix F-85. Violations will be identified by the Violation Reason Code (VRC) with the erroneous data element underlined by asterisks. The following corrective procedures are outlined to serve as guidance in preparing corrective action. Documentation referred to may be a coding sheet, the copy of the appendix F-204 used to prepare the A/R, Receipt or Contract Data inquiry responses, or copies of the active Award files (contracts). Violation of Acceptance Alerts will be more difficult to investigate and correct. A telephone call to the applicable CAO may be required to obtain missing or incorrect information.

a. VIOLATION REASON CODE AA.

(1) REASONS FOR VIOLATION/ERROR:

Condition indicates an improper/invalid DIC. VRC AA alpha dates appear in pos. 68-70 and 75-77 with DIC ZKN or ZKP in pos. 1-3.

(2) PROCESSING/RESEARCH REQUIRED:

Review coding form or input documents. If date received in pos. 66-72 and 73-79 is constructed IAW appendix A-74, the DIC must be PKP or PKN. If MRC and RCC dates (all numeric) are entered in pos. 66-69 and 70-73, respectively, the DIC must be ZKN or ZKP. Correct DIC as required.

b. VIOLATION REASON CODE AI.

(1) REASON FOR VIOLATION/ERROR:

Procurement Instrument Identification Number contains embedded blanks or special characters, or is less than 13 positions long.

(2) PROCESSING/RESEARCH REQUIRED:

Determine from documentation, if available, the correct PIIN. Review original input coding form for correct PIIN if violation occurred for an A/R. If DIC PK5, contact applicable CAO by telephone for correct data.

c. VIOLATION REASON CODE AN.

(1) REASON FOR VIOLATION/ERROR:

The purchase unit is blank or contains blanks or numeric characters.

(2) PROCESSING/RESEARCH REQUIRED:

Review coding form, input document or inquire Contract Data to attempt to identify proper Purchase Unit. If necessary, contact CAO for required information. Correct data and reenter.

d. VIOLATION REASON CODE AS.

(1) REASON FOR VIOLATION/ERROR:

The shipped quantity, pos. 47-54, is zero filled or blank. The quantity accepted, pos. 57-64, is zero filled with no D in pos. 80, Interim Report.

(2) PROCESSING/RESEARCH REQUIRED:

Review coding form or input document to determine correct quantity or inquire receipt history for correct quantity accepted. If necessary, contact CAO if shipped quantity is questioned. Determine correct quantity and reenter.

e. VIOLATION REASON CODE D9.

(1) REASON FOR VIOLATION/ERROR:

The DIC in pos. 1-3 is ZKP or ZKN and an invalid TP Control Number is entered in pos. 74-79.

(2) PROCESSING/RESEARCH REQUIRED:

Review the coding form. If A/R was manually prepared, DIC ZKN or ZKP should be accompanied by a TP Control Number in pos. 74-79. If pos. 74-79 contains alpha characters (a month abbreviation appears in pos. 75-77), the date was prepared incorrectly or the DIC is in error. DIC ZKN or ZKP require MRC date and Date of Receipt in addition to TP Control Numbers. Determine correct data and reenter.

f. VIOLATION REASON CODE EX.

(1) REASON FOR VIOLATION/ERROR:

The call/order number (SPIIN) contained embedded blanks.

(2) PROCESSING/RESEARCH REQUIRED:

Determine the correct SPIIN by reviewing Contract Data, Receipt History, or input coding form to identify the correct or missing information.

g. VIOLATION REASON CODE HP.

(1) REASON FOR VIOLATION/ERROR:

Violation Reason Code HP indicates that the DIC in pos. 1-3 is PKN or PKP, and the delivery or acceptance dates were not constructed in accordance with the provisions outlined in appendix A-76; or the DIC in pos. 1-3 is ZKN or ZKP, but pos. 67-69 and/or 70-73 are not equal to or greater than 001 and less than 367.

(2) PROCESSING/RESEARCH REQUIRED:

Review the violation appendix F-85 and determine the error. If the DIC is PKN or PKP, inquire Receipt History to determine the proper Julian date of receipt or MRC date. Convert this date to the proper day, month and year format. If the DIC is ZKN or ZKP, review the MRC or receipt dates for compliance with appendix B-134 criteria. Correct or supply the missing dates as required.

h. VIOLATION REASON CODE IU.

(1) REASON FOR VIOLATION/ERROR:

The contractor's shipment number is blank.

(2) PROCESSING/RESEARCH REQUIRED:

If DIC is ZKN or ZKP research documentation available to identify the correct shipment number. Inquire Receipt History, if necessary, to obtain correct information. If DIC PK5, review receipt documentation (DD Form 250, etc.) or contact CAO for corrected data.

i. VIOLATION REASON CODE JI.

(1) REASON FOR VIOLATION/ERROR:

The CLIN is invalid; it contains other than all numeric in the first four positions.

(2) PROCESSING/RESEARCH REQUIRED:

Investigate coding form or available documents, or inquire the Completed Receipt File to identify the correct CLIN. Contact CAO if DIC is PK5 and CLIN is incorrect.

j. VIOLATION REASON CODE RZ.

(1) REASON FOR VIOLATION/ERROR:

The consignee code contains blanks or special characters.

(2) PROCESSING/RESEARCH REQUIRED:

Obtain the proper DoDAAD consignee code as applicable to correct the "Ship To" identity or "ADP Point" coding error. If necessary, contact CAO if error appears on DIC PK5.

k. VIOLATION REASON CODE TU.

(1) REASON FOR VIOLATION/ERROR:

Transaction status is other than A, C, D, or blank, or the transaction status is D; but pos. 66 is not X overpunched and/or no U is present in pos. 65.

(2) PROCESSSING/RESEARCH REQUIRED:

Review coding form to check for proper Transaction Code. Check above pos. and 66 for proper information entry. Contact CAO if error appears on DIC PK5.

l. VIOLATION REASON CODE 8V.

(1) REASON FOR VIOLATION ERROR:

Shipment explanation or discrepancy code is other than D, M, N, O, S, T, U, W, X or blank. If U is entered, pos. 66 must contain an X overpunch.

(2) PROCESSING/RESEARCH REQUIRED:

Review input coding form for error. Check to ensure X overpunch is specified if the status is U.

5. REENTRY INSTRUCTION

Determine correct entries. Annotate corrections on the F-085 Violation Printout. Reenter correct A/A or A/R per input format outlined in appendix B-133 or B-134.

APPENDIX E-095 P

U.S. GOVERNMENT BILL OF LADING (SF 1103) AND CONTINUATION SHEET (SF 1109)

1. REFERENCES

a. DLAR 4500.3, Chapter 214

b. Chapter 60

c. Appendix C-19

d. Appendix C-95

e. Appendix C-96

f. Appendix A-93

2. FORMS

a. SF 1103

b. SF 1109

3. PURPOSE

Outline the use, issuance, preparation, distribution and accomplishment of Government Bills of Lading.

4. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Commercial Traffic Branch is responsible for the preparation, issuance and distribution of Government Bills of Lading for all outbound freight shipments.

5. GENERAL

a. The Government Bill of Lading is used for the procurement of transportation and related services from commercial carriers when the charges for such services are properly payable by the Government directly to carriers concerned.

b. Only authorized transportation officers or acting transportation officers may issue Government Bills of Lading provided required supporting documentation is available.

c. Specific instructions relative to Government Bills of Lading are outlined in paragraph 1a above.

d. Data required to complete a Government Bill of Lading will be obtained from the Shipment Planning Worksheet (SPW) unless otherwise specified.

e. Other GBL standard forms not covered herein will be processed and utilized in accordance with paragraph 1a above.

6. PROCEDURES

a. SF 1103, U.S. Government Bill of Lading original will be utilized when there is sufficient space available to properly describe the shipment and enter applicable data. SF 1109, Continuation Sheets will be utilized whenever the designated space on the basic Bill of Lading set is insufficient to list the articles constituting the entire shipment and other required information.

b. Sufficient space will be reserved on the basic Bill of Lading set to show the total number of continuation sheets used, weights and other data as prescribed and applicable.

c. Entries on SF 1103 and SF 1109 are as outlined in the following subparagraph. Specific data entries required for certain shipments and not shown will be entered in accordance with instructions contained in paragraph 1a above.

DATA	DESCRIPTION	SOURCE
B/L Number	Prefix symbol and B/L serial number.	Preassigned to Form
Transportation Company Tendered To	Enter the full name of the initial line-haul carrier and mode of Shipment Code, appendix A-17.	As Assigned
Traffic Control Numbers	The route order number, the export release number, and other symbols assigned to the movement will be shown.	SPW
Stop Car or Truck At	Show stop off points for partial unloading or to complete loading if applicable. Complete entries in accordance with paragraph 1a above.	SPW
Car-Truck Ordered, Furnished	Enter car-truck ordered/furnished/size and date furnished.	SPW
Date B/L Issued	The date of issue will be the date the first entry is made on the B/L.	As Assigned
Car-Truck Initials and Number, Kind	The initials and number of the car or vehicle will be shown also the type of car or vehicle will be shown in the space marked "kind." Type may be indicated by symbol as outlined in paragraph 1a above.	SPW

DATA	DESCRIPTION	SOURCE
From Shipping Point	The name of the point at which the shipment is actually tendered to the initial carrier will be shown.	As Assigned
Shipper	Full name of the shipping establishment will be shown.	As Assigned
Marks	Any marks having reference to transportation, delivery at destination, or identification of packages en route or at destination will be shown, e.g., when a shipment is consigned direct or is reforwarded to a port for export, the notation "FOR EXPORT" will be shown.	SPW or As Determined
Consignee	The designation or official title of consignee and the official name of activity will be shown IAW particular shipping instructions.	SPW Terminal Facilities Guide DLAH 4510 Series
Destination	On the first line enter the Issue Priority Designator (IPD) and the Desired Delivery Date (DDD).	SPW
	Enter the destination. Instructions contained in the Terminal Facilities Guides designate, according to the mode of transportation utilized, the city, town, or point, and state to be shown on the GBL as destination.	DLAH 4510 Series
Routing (VIA)	Enter the routing instructions provided in the route order or export release. Enter the official abbreviation of the initial carrier's name. NOTE: For shipments not covered by route releases the "Via" space of the GBL may be of the GBL may be left blank except when it is to the advantage of Government to name the connecting carriers.	MTMC, SPW Official Railway Equipment Register (Other modes enter the full name of each carrier.)
Seal Numbers	Enter seal numbers, the applied by space will be marked "Shipper."	As Assigned

DATA	DESCRIPTION	SOURCE
Charges To Be Billed To	Enter the official designation and address of the office responsible for payment of the charges, referred to as the disbursing office. When transportation charges are to be paid direct to a carrier by the Government agency other than the shipper agency, the name of the department and the office responsible for payment will be shown. NOTE: Normally this data is overprinted on the GBL locally.	DLAR 4500.3 Paragraph 214033
Appropriation Chargeable	Enter the name of the Government agency, and full allotment symbol when a specific allotment is chargeable. When more than one appropriation allotment is chargeable, enter the notation in this block "See Below and/or Continuation Sheets."	SPW
Number and Kinds of Packages	The number of packages or containers, kind of package or containers (barrels, boxes, crates, etc.) will be entered.	SPW
Description of Articles	Freight description of articles to be shipped and other data will be entered as follows and applicable. Appropriation Code Chargeable Transportation Control Number (TCN) Consignee Ship To Code Issue Priority Group (IPG) Required Delivery Date (RDD) Port of Debarkation Code (POD) Water Commodity Code Project Code UFC and Suffix and/or NMFC and Suffix Freight Description Cube Shipment Unit Number Assembly Location Mark for: In-the-Clear Address. Special Instructions, e.g., "Emergency Shipment" "Green Label," and so on. NOTE: Exceptional required data entries not indicated will be shown as prescribed by paragraph 1a above.	SPW

DATA	DESCRIPTION	SOURCE
Numbers on Packages	When packages/containers are serially numbered, enter numbers indicated.	SPW
Weights	Enter the shipment and, where applicable, the skid weight, pallet weight and dunnage weight. Example: Freight 12500 Skid Weight 200 Pallet Weight 150 12850 Dunnage Weight 200 NOTE: Weights shown on the bill of lading will be specified as "Agreed" or "Tariff" weight to conform to the provisions of weight agreements. Enter "Agreed" or "Tariff" immediately below the word "Weights."	SPW
Tariff or Special rate Authorities	On MTMTS routed traffic or any shipment, regardless of quantity, subject to special rate tenders or arrangements complete tariff authority will be shown. NOTE: Freight rates will not be shown on GBL.	As Assigned
Transportation Company	The full name of the initial carrier will be entered.	SPW
Certificate of Issuing Officer	The official name of the installation or activity at which the bill of lading is issued will be entered. The address will be entered unless it is shown in the "From (Shipping Point)" space. The Certificate of Issuing Officer will be signed, followed by the date signed and the name and title of the official issuing the bill of lading. The signing for the transportation officer will be followed by his title and the word "for."	As Assigned

e. SF 1109 (Continuation Sheet Entries):

DATA	DESCRIPTION
Name and Location of Shipper	Enter name and location of shipper as shown on page 1.
Bill of Lading Number	Enter B/L number as shown on page 1.
Page Number	Enter page number as applicable 2, 3, or 4, and so on.
Description of Articles	Under description of articles enter the following data as applicable: Appropriation Code Chargeable Transportation Control Number (TCN) Consignee Ship To Code Issue Priority Group (IPG) Required Delivery Date (RDD) Port of Debarkation Code (POD) Water Commodity Code Project Code UFC and Suffix or NMFC and Suffix Freight Description Number of Packages (applicable block) Kind of Packages (applicable block) Cube Shipment Unit Number Assembly Location Numbers on Packages/Containers (applicable block) Total weight (Enter as Appropriate) Skid Weight, Pallet Weight, Dunnage Weight (applicable block) Mark For: In-the-Clear-Address NOTE: Above entries are made for each TCN under the same appropriation symbol. Enter total number of packages, cube and weight at bottom of page and enter the notation "Carried Forward to Page 1."

f. Enter the following data under description of articles on first page of GBL (SF 1103):

Space down to center of page and enter the notation "Carried Forward from SF 1109". Enter totals as compiled from continuation sheet(s), total number of packages, kinds of packages, total cube and total weights.

NOTE: All other entries on the first page will be as outlined for SF 1103, subparagraph 6d above.

7. DISTRIBUTION

Distribution of GBL will normally be as follows, exceptions to distribution will be IAW instructions outlined in DLAR 4500.3. Distribution will be made after receipt by carrier.

COPIES	TO
1	Consignee
2,3,4	Carrier
5	MTMC
6	File (With applicable documentation backup data.)
7	Consignee
8	Appropriate Finance and Accounting Office
9	Used internally for check of shipments, or other distribution as may be required.

APPENDIX E-096 P

BIN ITEM INQUIRY CARD

1. PURPOSE

This procedure contains instructions for establishing NSNs or NSN by popularity Group Code that may be candidates for bin replenishment procedures.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-42

b. Appendix A-82

c. Appendix B-103

d. Appendix D-93

e. Appendix E-096 V

f. Appendix F-85

g. Appendix F-95

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

DS/T

4. PROCESSING/INSTRUCTIONS

a. This process will enable all DLA depots to use bin issue data to determine bin replenishment requirements. The data depicted on the F-95 by NSN and/or popularity Group Code should be used to identify specific NSNs that qualify for bin replenishment and when used properly should reduce overall bin replenishment frequency. This may also result in a reduction in rewarehousing volumes at depots.

b. Potential bin replenishment for NSN(s) can be identified on the F-95 by entry of up to 200 NSNs and up to three popularity Group Codes. Computer runs should be limited to once a week.

APPENDIX E-096 V

BIN ITEM INQUIRY CARD VIOLATIONS

1. INPUT DOCUMENT

Appendix B-103, Bin Item Inquiry Card, DIC ZUJ.

2. INPUT TO PROCEDURE DECISION CHART

Appendix D-93

3. PURPOSE CONTENT AND RESPONSIBILITIES

This appendix provides instructions for the research, correction, and reentry of the Bin Item Inquiry Card. The Director, DS/T, or his designee, is responsible to prepare and correct any cards that have been rejected from computer process. Reasons for rejects are as follows:

VIOLATION REASON CODE	DEFINITION
AY	NSN invalid or blank.
OQ	Invalid Popularity Group Code or all fields blank.

4. PROCESSING/RESEARCH INSTRUCTIONS

a. VIOLATION REASON CODE AY.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that the stock number is invalid or contains blanks in pos. 8-20.

(2) PROCESSING/RESEARCH REQUIRED:

Review appendix F-85, Violation Printout and/or coding sheets to determine incorrect data input. Reenter transaction with correct NSN data.

b. VIOLATION REASON CODE OQ.

(1) REASON FOR VIOLATION/ERROR CONDITION:

Indicates that entry(s) in pos. 21, 22, or 23 are other than A, B, C, D, E, F, or G, or all positions are blank. Field positions 22 and 23 may be blank but a valid entry is required in pos. 21.

(2) PROCESSING/RESEARCH REQUIRED:

Review appendix F-85 to determine error. Reenter card with corrected data.

APPENDIX E-097 P

INPROCESS SHIPMENT UNITS WITH CURRENT PDT/MDT

1. PURPOSE

To provide capability to inquire by PDT/IPG or MDT/IPG for CRT visibility of Material Release Orders (MROs) that have not been offered to transportation for the current day. Process allows inquiry by warehouse location.

2. APPENDICES USED IN THIS PROCEDURE

a. Appendix A-102

b. Appendix B-214

3. RESPONSIBLE ORGANIZATION ELEMENTS

a. Transportation and Shipping Division

b. Warehousing Division

4. PROCEDURES AND INSTRUCTIONS

a. There are two types of entries allowed in this procedure:

(1) Inquire MROs by IPG and PDT equal to the current date. If a specific location is desired enter the three position Warehouse Location Code in LOC field, if not leave blank.

(2) Inquire MROs by IPG and MDT equal to the current date. If a specific location is desired enter the three position Warehouse Location Code in LOC field, if not leave blank.

b. To initialize the CRT, key in $$UWFH60 and depress the ENTER key. If the entry was successful, the following format will display:

INQUIRY OF MROS IN OPEN STATUS UWFH60

OPTIONS:

P - DISPLAYS MROS BY IPG WITH A PDT EQUAL THE CURRENT DATE

M - DISPLAYS MROS BY IPG WITH A MDT EQUAL THE CURRENT DATE

ENTER OPTION IPG LOC

c. Enter the option, the IPG1 and location (optional) desired and depress the ENTER key. A successful entry will display all open MROs for the current date in MOFAST Shipment Status Codes A or B for the option, IPG and warehouse when requested. The display will be as follows:

IPG 1 IN OPEN STATUS

SU/LINE NUMBER	DOCUMENT NUMBER	NSN	UI	QTY	WHS LOC	PROJ	MODE CODE	STAT CODE

ERROR/MESSAGE	CAUSE/ACTION
INVALID OPTION REQUESTED MUST BE M OR P	Probable Cause: An option other than M or P was entered. Action: Verify option code and reenter.
IPG REQUESTED MUST BE 1 2 OR 3	Probable Cause: An IPG other than 1, 2 or 3 was entered. Action: Verify IPG and reenter.

APPENDIX E-098 P

WORKLOAD REQUEST CARD

1. PURPOSE

This procedure describes the method of requesting workload in addition to the workload already scheduled for the current Planned Date to Transportation (PDT).

2. REFERENCES

a. Chapter 60

b. Appendix A-42

c. Appendix B-98

d. Appendix F-38

3. RESPONSIBLE ORGANIZATIONAL ELEMENT

The Workload Control Branch is responsible for reviewing the Workload Forecast and submission of Workload Request Card(s) when it is determined that additional workload is required.

4. PROCEDURES/INSTRUCTIONS

a. Receive daily Workload Forecast report, appendix F-38.

b. Review report and determine if workload in addition to that scheduled to be released for the current PDT is desired.

c. Determine in coordination with appropriate operating elements resource requirements required to accomplish the workload.

d. Prepare and submit Workload Request Card, DIC ZBL, in the format prescribed by appendix B-98. Card inputs processed through the entry system are validated during the batch process and rejects are output on the F-85 Violation Reject Report. The Workload Request Card may be entered to the computer via CRT for processing as follows:

(1) Enter $$UWTF15. The display shown on figure 1 will be returned.

(2) Enter the desired input into applicable fields indicated on the display. Depress ENTER key. Successful input results will be indicated by input data being cleared from the CRT screen. Errors in input data will be displayed back with a message "INVALID DATA" with the cursor positioned under the invalid data field. Correct erroneous data and reenter the transaction.
